American Railroad Journal.

Saturday, March 15, 1862.

Share and Money Market.

The Market for the week has been an active and buoyant one, under daily receipts of exciting intelligence from all quarters. It is the general believe that the pacification of the country is substantially accomplished, and the market felt the full effect of such a conviction. It was a little lower at the close but steady at nearly the highest point reached. Railroad shares are sustained by the very large traffic of the roads, and which promises to be much greater for the present than any previous year. Money is active at seven per cent. Gold is selling at 1⅞ to 2 per cent. premium. Exchange is at 112 to 112½.

Proposed Taxes on Travel.

The National Tax Bill, reported to Congress, imposes a duty of two mills per mile on every ordinary passenger conveyed by Railroad, after the 1st of May next, payment to be made by the companies. But in the case of persons who commute for not less than thirty days consecutively, the tax is to be three per cent. on the gross receipts. These regulations apply only to roads on which steam power is used.

The proposed rate of taxation on steamboat travel, with the exception of ferries, is one mill per mile for every passenger, the distance being reckoned from the place of embarkation to that of landing. On stages, city railroads, and all other means of regular conveyance from place to place, where steam is not used, the proposed tax is three per cent. on the gross receipts.

The proprietors of all such railroads, steamboats and omnibuses, or those entrusted with their management, must, within thirty days after the end of each month, furnish to the Assistant Assessor of the district, a list stating where such railroads are located, or where such steamboats, stages, &c., belong; the number of miles travelled by passengers, with the amount of commutation received and that of the duties accruing therefrom. This statement must be sworn to by the owners or the officers in charge, and be accompanied by the sum then due, which shall be paid to the Assistant Collector.

In case of neglect to comply with this regulation for a period of thirty days, a penalty of five per cent. on the sum due will be imposed. Any attempt to defraud the government, will be visited with a penalty of $10 for each passenger carried and not properly accounted for, or one of $1,000, at the discretion of the court. Passengers carried free are to be exempted from the payment of duty.

In addition to the above, all railroad companies issuing bonds or other evidences of indebtedness, payable at more than one year after date, are made subject to a duty of three per cent. on the amount of interest or coupons—the same to be deducted from all payments made after the 1st of May next. A list of such interest payments must be rendered to the Commissioner of Internal Revenue, within thirty days after the time of their falling due, and every six months thereafter, duly certified and sworn to by the President, Treasurer, or other principal officer in charge. A penalty of $500 will be imposed for default in making out the returns; and in the case of default in paying over the amount due, the assessment and collection are to be made out according to the general provisions of the act. The remission of this sum, duly certified to, shall be a receipt for the same, as respects the party to whom such interest shall be owing.

If the ordinary rate of passenger fare in the loyal States be placed at three cents per mile per passenger, it will be seen that the proposed tax will be nearly seven per cent. upon all gross receipts for travel. This is equivalent to fully ten per cent. on net profits. On the great lines leading from this City, Philadelphia and Boston, where the passenger fare averages only a fraction over two cents per mile, these respective rates would be at least ten and fifteen per cent. In addition to this, is the proposed internal duty of $1 50 per ton to be levied upon railroad iron, which will of course enhance prices to the same extent at least. It seems to us that the railroad interest has hardly deserved to be saddled with so very oppressive a load as this.

Erie Railway.

The following is a statement of the earnings of this road for the first four months of the present fiscal year:

Months.	1861-2.	1860-1.	Increase.
October	$722,362 05	$585,597 59	$136,764 46
November	734,826 10	554,532 25	180,293 85
December	708,136 29	404,276 30	303,859 99
January	695,606 98	404,507 55	291,099 43
Totals	$2,860,931 42	$1,948,914 69	$912,017 73

The increase has been very nearly at the rate of 50 per cent. A similar rate of increase for the last two months of the half year, would give a total of earnings for six months of $4,136,439 36; the earnings of the road for February, 1861, being $391,100 99; for March, $459,737 66. We presume the per centage of increase for the first four months of the half year will be more then maintained by the last two; if so, the earnings of the road are at the rate of $8,272,478 72 for the year. The highest previous earnings for any one year, were those of 1856, which reached $6,400,000. This sum will be greatly exceeded the present. If the road earns $7,500,000 for the year, it can certainly count upon $3,000,000 as net earnings, which is the interest on $42,800,000. Whatever may be the exact result, enough is seen to show that the road is earning a large surplus over the interest on its funded debt and dividends on its preferred stock, which to-

gether, call for less than $2,000,000. The only thing in the way of a dividend on the preferred stock in July, are the over-due coupons, which to the amount of something like $1,000,000 are now being paid off. The earnings and prospects of the road are now fully up to the expectations of its most sanguine friends.

The Commerce of Milwaukee in 1861.

The annual report of the trade and commerce of Milwaukee for 1861 shows a highly gratifying rate of progress in the business of that port. Political disturbances and financial difficulties growing out of these have done very little, if anything at all, to retard her growth, as will be seen from the statistics presented below. Milwaukee enjoys an excellent situation and her people have made the most of it. Two rivers unite within three miles of Lake Michigan and form her harbor, which has been improved by constructing two piers which extend into 14 feet of water and afford a channel way 260 feet wide. The bay outside is well protected by headlands on each side. As Lake Michigan on that parallel is never completely frozen over, the port can hardly be said to be closed at any season of the year. The completion of the Detroit and Milwaukee Railroad has given it every desirable facility for direct intercourse with the East and Europe, while the numerous roads extending toward the Mississippi render nearly all Wisconsin, Iowa and Minnesota directly tributary to it.

The population of Milwaukee, as shown by the last census, was 46,000, against 32,000 in 1855, and 20,000 in 1850. At the present moment it is believed to reach 50,000. The place does not depend upon trade solely, but has several important manufactures, as flour-mills, tanneries, distilleries, brick yards, ship yards, etc. A valuable water power is obtained a short distance from the city.

The flour and wheat trade of Milwaukee for 1861 shows an immense increase over any previous year, as shown by the following figures, reducing flour to bushels:

	Received.	Shipped.
1861	18,522,206	16,672,865
1860	10,706,708	9,856,323
Increase	7,815,498	6,816,542

The annexed statement shows the shipments of flour and wheat from Milwaukee for 16 years:

	Flour, Barrels.	Wheat, Bushels.	Total, in bushels.
1845	7,550	95,510	133,260
1846	15,756	213,448	292,228
1847	34,840	598,911	772,211
1848	92,732	602,474	1,066,134
1849	136,657	1,136,023	1,819,304
1850	100,017	297,578	797,663
1851	51,889	317,285	576,730
1852	92,995	564,404	1,029,179
1853	104,055	956,703	1,476,978
1854	145,032	1,809,452	2,534,612
1855	181,568	2,641,746	3,549,586
1856	188,455	2,761,979	3,704,254
1857	228,442	2,581,312	3,723,522
1858	298,688	3,994,213	5,487,653
1859	282,956	4,732,957	6,147,837
1860	457,543	7,568,608	9,856,323
1861	674,474	13,300,495	16,672,865

The shipments from the other lake ports in Wisconsin added together were—flour, 125,511, and wheat, 1,467,106 bushels, showing that nearly nine-tenths of the quantities exported from that district pass out of Milwaukee.

Of the flour shipped during the year about one-third went by the Detroit and Milwaukee Railroad and one-ninth by Chicago. Of the wheat shipped, nearly all went round by lake to Buffalo, Oswego, Ogdensburg, and Canadian ports. Among the sources of supply for wheat we find that the Milwaukee and Prairie du Chien Railroad brought 5,872,415 bushels, the La Crosse and Milwaukee, 5,489,243, and the Milwaukee and Western road, 2,271,419. It is stated that towns along the lake shore north of Milwaukee have found it to their advantage to ship a large proportion of their surplus of wheat to that market.

Various influences affected the wheat market seriously. Of course, the most important was the war; but this appears to have made some amends by diverting trade eastward from the Mississippi. The distraction in the currency, however, threatened for a time to be most disastrous; but ultimately that was got over and trade resumed its former channels. Apprehension of war with England, later in the season, led to a considerable decline in prices; this gust has also blown over. During the year prices varied from 68 to 98 cents per bushel. The estimated yield of Wisconsin, in 1861, was about fifteen millions of bushels, or little more than half the amount of 1860.

The trade in the coarser grains last year was inconsiderable, and except in the single article of rye shows a decrease, as compared with 1860. The corn region proper lies below the parallel of that city. Below we give the aggregate of each kind received:

	1861.	1860.
Oats	151,346	178,963
Corn	114,981	126,404
Barley	66,991	109,795
Rye	73,448	32,382

Adding these to the wheat received we have a grand total of 18,913,832 bushels, while the shipments reached 16,710,565.

The receipts of wool during the year were 1,000,225 lbs. against 659,275 lbs. in 1860, of hides, 69,743, against 85,409. The provision trade is still small, but increasing materially. The wholesale grocery and drygoods trade fell off seriously, from various causes; at the same time, it is stated that the credit of Milwaukee was not tarnished by a single failure in either, while several new names have been added to both.

The annexed table gives an approximative estimate of the value of the principal articles exported:

	1861.	1860.
Flour	$3,000,000	$2,179,140
Wheat	12,313,000	7,228,020
Coarse grains	14,200	55,481
Provisions	900,000	566,154
Wool	350,000	273,750
Hides	53,600	79,058
Furs and skins	1,000,000	1,000,000
Butter	63,670	89,609
Ashes	17,000	54,000
Ginseng	80,000	75,000
Grass seed	9,800	22,959
Cranberries	25,000	.....
Total	$17,826,470	$12,123,161

A large grain elevator has been erected at the termini of the Prairie du Chien and the Western Railroads, capable of storing 700,000 bushels. The capacity of all the elevators in the city is 2,470,000 bushels, which can be shipped at the rate of half a million bushels per day.

The gross receipts of the Milwaukee and Prairie du Chien Railroad (formerly Milwaukee and Mississippi) in 1861 amounted to $1,153,406 67, against $799,841 45 in 1860, and $479,721 92 in 1859. The new company is now paying the interest on its bonds with promptitude, and is steadily recovering ground under its present management. The La Crosse road shows an equally gratifying condition. Its earnings in 1861 were $1,070,821 86, against $756,475 75 in 1860, $665,493 56 in 1859, and $492,453 80 in 1858. It is believed that this line will ere long work its way to financial independence. The earnings of the Milwaukee and Western road are not given; but its business is shown to have nearly doubled during the year. The other lines terminating at or pointing toward Milwaukee show an equally gratifying state of affairs.

The Treasury Notes.

New York Clearing House, *March* 7, 1862.

A meeting of the Clearing House Association, was this day held at the Clearing House. Geo. S. Coe, esq., on behalf the Clearing House Committe, reported:

That at a meeting of the Committee, held on the 5th inst., the following resolution was adopted, viz.:

Resolved, That the Committee consider, that it had become necessary and desirable, that the United States Demand Treasury Notes, be made a basis for the settlement of balances, at the Clearing House.

He remarked that the subject had been carefully considered by the Committee, and four modes of use proposed, as follows, viz.:

1st. The direct use of the Demand Notes, for the settlement of balances.

2d. The deposit of the notes in a bank selected for that purpose, and the use of certificates representing such deposits, subject to the same conditions, and in all respects similar to the specie certificates heretofore used.

3d. The deposit of the notes, as proposed by the second plan, in a bank, to be held in trust as a special deposit, but such deposits to be transferred and used in the settlement of balances by drafts, drawn upon the deposits, instead of certificates representing them, as proposed by the second plan.

4th. The use of Cetificates of Deposit—to be issued by the Assistant-Treasurer of the United States (upon a deposit of the Demand Notes in the Treasury) in convenient and special form, payable to the order of any bank, member of the New York Clearing House Association only. Such Certificates to be issued by the Assistant-Treasurer under the Authority of the act of Congress approved Feb. 25, 1862, authorizing the issue of Treasury Notes payable on demand, to be a legal tender, and empowering the Assistant-Treasurers of the United State to receive deposits of such notes for not less than thirty days, payable after ten days' notice, said Certificates bearing interest at the rate of 5 per centum per annum. The Committee approved the second plan, as being less of an innovation upon the established usage of the Clearing-House than either of the other methods proposed, but they decided to refer the subject to the Association for its decision without recommendation.

On motion of Mr. Gallatin it was

Resolved, That the Legal Tender United States Treasury Notes be used hereafter as a medium of settlement at the Clearing-House.

Mr. Vail offered the following resolution, viz:

Resolved, That the fourth proposition of the Clearing-House Committee is essentially that which should be and is hereby adopted, and the said Committee are requested to confer with the Assistant-Treasurer as to the terms and

arrangements upon which the requisite and desired deposits shall be received; with power to arrange the form of Certificates and other details.

On motion of Mr. Vail it was

Resolved, That the amount of notes to be deposited with the Assistant-Treasurer, be limited to $20,000,000, and that the deposits shall be in pro-rata of capital.

Authority of the President over Railroads and Telegraph Line.

The following is a copy of the Act of Congress approved January 31, 1862, conferring upon the President absolute power to take possession of, and hold any and all Telegraph and Railroad lines in the United States, to make rules regarding the same, and to place them all or any of them, under military control:

AN ACT to authorize the President of the United States in certain cases to take possession of railroad and telegraph lines, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States, when in his judgment the public safety may require it, be and he is hereby authorized to take possession of any or all the telegraph lines in the United States, their offices and appurtenances; to the possession of any or all the railroad lines in the United States, their rolling-stock, their offices, shops, buildings, and all their appendages and appurtenances; to prescribe rules and regulations for the holding, using, and maintaining of the aforesaid telegraph and railroad lines, and to extend, repair, and complete the same, in the manner most conducive to the safety and interest of the Government; to place under military control all the officers, agents, and employees belonging to the telegraph and railroad lines thus taken possession of by the President, so that they shall be considered as a post road and a part of the military establishment of the United States, subject to all the restrictions imposed by the rules and articles of war.

Sec. 2. *And be it further enacted*, That any attempt by any party or parties whatsoever, in any State or District in which the laws of the United States are opposed, or the execution thereof obstructed by insurgent and rebels against the United States, too powerful to be suppressed by the ordinary course of judicial proceedings, to resist or interfere with the unrestrained use by Government of the property described in the preceding section, or any attempt to injure or destroy the property aforesaid, shall be punished as a military offence, by death, or such other penalty as a court martial may impose.

Sec. 3. *And be it further enacted*. That three commissioners shall be appointed by the President of the United States, by and with the advice and consent of the Senate, to assess and determine the damages suffered, or the compensation to which any railroad or telegraph company may be entitled by reason of the railroad or telegraph line being seized and used under the authority conferred by this act, and their award shall be submitted to Congress for their action.

Sec. 4. *And be it further enacted*, That the transportation of troops, munitions of war, equipments, military property and stores, throughout the United States, shall be under the immediate control and supervision of the Secretary of War and such agents as he may appoint; and all rules, regulations, articles, usages, and laws in conflict with this provision are hereby annulled.

Sec. 5. *And be it further enacted*, That the compensation of each of the commissioners aforesaid shall be eight dollars per day while in actual service; and that the provisions of this act, so far as it relates to the operating and using said railroads and telegraphs, shall not be in force any longer than is necessary for the suppression of this rebellion.

Approved, January 31, 1862.

Baltimore and Ohio Railroad.

It is gratifying to announce that arrangements are now in progress for very extensive and important improvements, which have long since been contemplated by the authorities of the Baltimore and Ohio Railroad Company. These will develop the facilities of this great institution for the safe and rapid transportation of both passengers and freight. One of the main improvements which is about to be commenced will be the construction of one wing which will be attached to the main building on Camden street, besides which there will be an entirely new track arrangement. The improvements would have been undertaken last spring, when the City Council wisely granted the Company the power to close Conway street, but the civil war which broke out with such fury, entailed such a financial loss upon the Company that immediate action was necessarily postponed until the present time. The business, however, of the Company is, at this time so heavy, and is expected to increase still more, soon as the main track shall have been re-opened, as will render these improvements a work of necessity. An additional track is being placed from Camden Station to the Spring Gardens, upon the bed of Ohio avenue, which will be nearly one mile in extent. An additional improvement is also in progress, consisting of an extension of the track on Howard street below Lee street turning off west, and extending over the large square of ground between Montgomery and Lee streets, which has recently been purchased for the use of the Company. This will effect a connection with the tracks on Ohio avenue, thereby enabling the Company to run their locomotives in and out of the city in connection with trains to and from the Northern Central Railway without blockading the tracks in Camden Station. It only remains for the City Council to

give the Company the right to extend the track which they now occupy on Howard street, one half square below Lee street to enable it at once to carry out this most desirable enterprise, which, when completed, cannot fail to facilitate the transportation of Government and other freights between the North and the Federal Capital—*Balt. American.*

Railroad Earnings--Weekly.

The Chicago and Rock Island Railroad earned
the 1st week in March, 1862 ..... $18,890 59
Do., 1861 ..... 18,574 77

Increase $315 82

The Michigan Central earned in the 1st week
in March, 1862 ..... $33,301 59

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Feb. 10, 1862.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held at their office in New York, this day, it was

Resolved, That an assessment of FIVE DOLLARS per Share, upon the Scrip Shares of the Capital Stock of the Company, be, and the same is hereby called, payable on the 10th of March, 1862; and that the same be payable on the Stock registered in the City of New York at the office of the Company in that City; and on the Stock registered in London, at the office of Messrs. ROBERT BENSON & Co., London; and that parties desiring to pay their assessment in London, may pay the same at the rate of four shillings and two pence sterling to the dollar.

Resolved, That the transfer books be closed on the afternoon of the 1st March next, and re-opened on the 10th of the same month; and that no transfer be permitted on or after that day of Shares upon which the foregoing assessment shall not have been paid.

THOMAS E. WALKER, Treasurer.

NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, Feb. 5, 1862.

SEVENTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-Annual Dividend of Three per cent. on the capital stock thereof, payable on the 20th day of February inst. upon stock registered at New York, Boston, or Albany, and on the 20th day of March next, upon stock registered at London. Stockholders whose stock is registered at New York, will receive their dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar. The transfer books, which are now closed, will be re-opened at New York, Albany and Boston, on the morning of Monday, the 24th day of February instant.

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

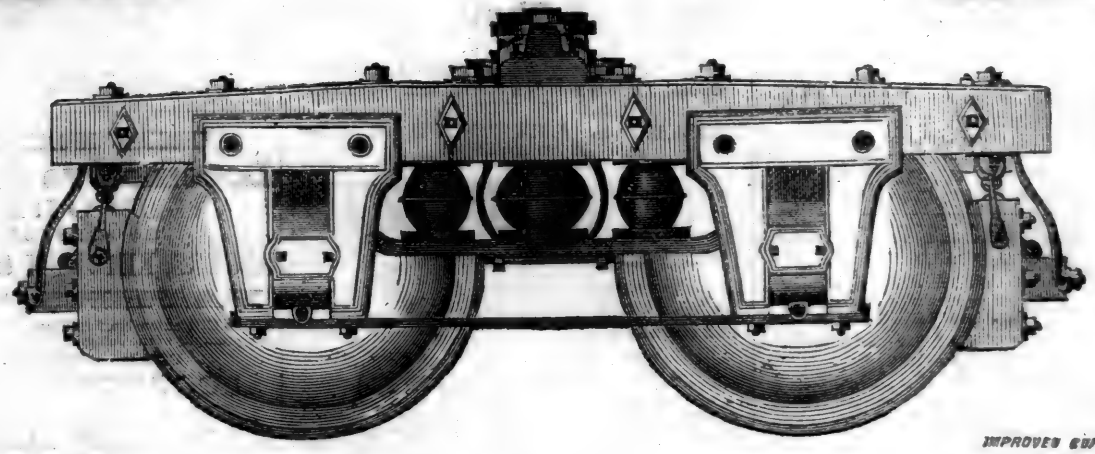
Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

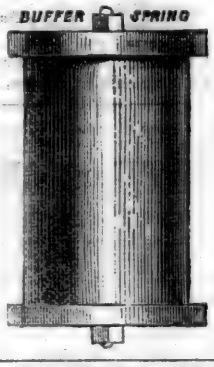
ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

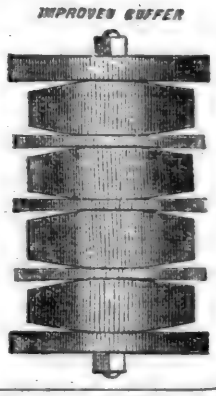




New England Car Spring Co.

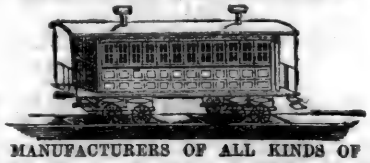
SOLE MANUFACTURERS

OF THE



India Rubber Car Springs.

OFFICE, 61 CHAMBERS STREET,



NEW YORK.

CAR MANUFACTURERS.

HARLAN & HOLLINGSWORTH & CO.,

WILMINGTON, DELAWARE,

MANUFACTURERS OF ALL KINDS OF

RAILROAD MACHINERY.

PASSENGER CARS of the **finest finish**, also all kinds of FREIGHT CARS, DUMPING CARS, HAND CARS, WHEELS and AXLES, STEEL SPRINGS, and in fact EVERYTHING for the **full equipment** of a road.

From our long **experience** in Car building, and our **facilities** for doing work, we are enabled to give ENTIRE SATISFACTION in every particular.

From our LOCATION, and CONVENIENCES FOR SHIPMENT, we can supply southern roads with despatch, and ship at reasonable freights.

We are also extensively engaged in building IRON VESSELS and IRON STEAM BOATS, STEAM ENGINES and BOILERS, and **Machine Work in general.** All orders executed with despatch and on reasonable terms.

UNION RAILROAD CAR WORKS,

PORTSMOUTH, VA.

FREIGHT, PASSENGER, BAGGAGE, EXPRESS, MARKET, COAL, LUMBER and HAND CARS, manufactured at this establishment of the **best material,** and in the MOST APPROVED manner, with either **Plate** or **Spoke Wheels** and **Axles,** of Salisbury or other Iron. Trucks fitted up, or Wheels and Axles separately will be furnished at the shortest notice, and shipped to any part of the United States.

Having **extensive arrangements** and **superior facilities** for manufacturing at this establishment, orders will be received and contracts made for **equipping entire roads** at short notice.

CONTRACTS for **RAILS**, at a fixed price or on commission, delivered at an English port, or at a port in the United States, will be made by the undersigned.

THEODORE DEHON,
10 Wall st., near Broadway, N. Y.

300 tons **T Rails** on hand, 54 to 57 lbs. per lineal yard.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

American Railroad Journal.

New York, Saturday, March 22, 1862.

Warwick Valley Railroad.

This is a branch of the Erie Railway starting from the junction with the Newburgh branch near Chester station, 54 miles from Jersey City, and running in a generally south-west direction to the village of Warwick, near the New Jersey line, the length being 10¼ miles. The entire engineering and construction of the road was let in the summer of 1860 to A. P. Robinson, Civil Engineer of this city, and Thomas Edsall, of Goshen, an old and well known contractor. The work was commenced in July of that year and completed in December last. The route is through what is known as the Warwick Valley, one of the richest and most fertile portions of Orange County, producing the choicest butter, and furnishing to New York city, a very considerable portion of its supply of milk and cream. The road has been constructed with a view to this later business, and will add at least 100 square miles to the area from which the supply is now derived. It is in contemplation to extend it at an early day in the same direction, to a connection with the railroads of New Jersey, thereby forming a direct line from the Hudson, at Newburgh, to the coal region of Pennsylvania. This will require the construction of about 80 additional miles.

The road is to be opened for traffic in a few days to its present terminus (Warwick). It is to be operated by the Erie Railway Company at fifty cents per mile run, that company furnishing the entire rolling stock and personele, fuel, oil, &c., the Warwick Company keeping the road in repair. The cost of the road complete, with all its buildings, is $185,000, made up as follows:

Stock subscriptions	$100,000 00
1st mortgage	60,000 00
2d "	25,000 00
Total	$185,000 00

The officers of the Company are—

President—GRENELL BURT.
Treasurer—JOHN L. WELLING.
Secretary—W. L. BENEDICT.

The entire means for the construction were obtained in the immediate vicinity of the road. The stock subscriptions have all been paid up, with the exception of less than 3 per cent., and all the bonds have been readily sold "at home," the first mortgage at 87½ cts., with the exception of $22,000, taken by the contractors at par, and the 2d at 70. These facts speak well as to the ability of the country to sustain the road.

The Trade and Commerce of Chicago.

The Fourth Annual Report of the Trade and Commerce of Chicago forms a closely printed pamphlet of 110 pages. The general result for 1861 is eminently gratifying. While the receipts of the largest grain market in the world were, in 1860, double those of 1859. The receipts of last year show an increase of nearly fifty per cent. upon those of 1860, and are fully three times the amount of either 1858 or 1859. This increase cannot be attributed, however, to an increased crop for last year, as the yield per acre was considerably below that of 1860. But the much greater breadth sown probably made up for the deficit in quantity, and in addition to this was the large surplus which remained over from the previous harvest. The interruption of trade on the lower Mississippi also diverted to the Lakes most of the grain, live stock, pork, etc., that used to go down that great river from St. Louis. The lake ports have thus all derived some incidental benefits from the war.

Attention is directed to the system of *grain inspection*, introduced in 1858, and now arrived at a high degree of perfection. In that year only about half the grain received was inspected; last year out of 45,970,687 bushels which arrived at Chicago, 43,870,065 were inspected. The want of a flour inspection was still felt until the present year, when one was established, as far as correctness in weight and uniformity in quality were concerned. Reference is also made to the losses induced by the circulation becoming depreciated through the fall of Southern State stocks. But, though it caused numerous individual losses, it does not appear to have affected the prosperity of Chicago seriously, as numerous parties have come to it during the year, transferring their business thither.

The number of elevating warehouses is fourteen, which have a capacity of 5,915,000 bushels. They can receive daily 675,000 and ship 1,795,000 bushels. Two new elevators will soon be ready, increasing those aggregates respectively to 6,815,000, 770,000, and 2,095,000 bushels.

The table of weekly receipts shows that the largest quantities of wheat and flour were received in September and October; while those of corn were much the largest in August, averaging nearly 1,200,000 bushels per week. Oats also came in most freely the same month.

The following statement shows the receipts of flour and grain at Chicago for the entire year:

Received by—	Flour, bbls.	Wheat, bush.	Corn, etc. bush.
Lake	13,199	12,839	585
Ills. & Mich. Canal	33,599	641,233	12,570,843
G. & C. U. R. R.	243,281	6,842,476	1,962,764
C. & R. I. R. R.	228,438	2,134,462	1,889,396
Ills. Central R.R.	198,893	2,080,410	5,615,445
C., B. & Q. R. R.	212,560	2,339,405	4,497,423
C. & N. W. R. R.	898,222	2,453,745	241,994
C., Alt. & St.L. R.R.	43,594	493,199	1,918,910
Chi. & Mil. R. R.	87,441	122,912	60,451
M. S. & N. I. R.R.	3,285	589	2,547
Mich. Cent. R. R.	12,574	14,767	3,327
P., Ft. W. & C. R.R.	4,238	38,965	2,650
	1,479,284	17,185,002	28,785,585
Teams, etc.		200,000	600,000
Manuf. in Chicago	291,852	.....	.....
In store, Jan. 1, '61	31,745	1,871,538	740,667
	1,802,881	19,256,540	30,126,252

The annexed table shows the amount of these received from 1854 to 1861 inclusive:—

	Flour, barrels.	Wheat, bushels.	Corn, bushels.	Oats, etc. bushels.
1854.	234,575	3,038,955	7,490,453	4,541,340
1855.	320,312	7,537,097	8,532,377	3,217,249
1856.	410,989	8,767,760	11,888,898	2,394,151
1857.	489,984	10,554,761	7,409,000	1,922,645
1858.	662,540	9,639,614	8,252,641	3,368,421
1859.	726,321	8,060,766	5,401,870	2,641,906
1860.	713,348	14,427,088	15,262,894	3,135,484
1861.	1,479,284	17,385,002	26,369,989	3,015,596

The quantities forwarded last year were in the aggregates as follows: flour (barrels) 1,603,920; wheat (bushels) 15,835,953; corn (do.) 24,372,725; oats (do.) 1,633,237; rye (do.) 393,813; barley (do.) 226,534. The differences between these figures and the receipts cover amounts retained for consumption or manufactured there. Of the flour exported 444,992 barrels went by the Michigan Southern; 242,430 by the Michigan Central; 314,196 by the Pittsburg, Ft. Wayne and Chicago Railroad, and 289,565 to Buffalo. It will be seen that the three railroads carried over one million barrels, or five-eights of the whole quantity. Of the wheat forwarded, rather more than one-half went by lake to Buffalo, nearly one-fifth to Oswego, and rather more than one-fifth to Canadian ports. The three railroads took less than 750,000 bushels in all. Of the corn nearly three-fourths were shipped by lake to Buffalo, one-sixteenth to Oswego, and one-twelfth to Windsor, C. W. The quantities of corn, oats, etc., forwarded by railroad were inconsiderable. Of the wheat received, 1,459,260 bushels were made into flour at the mills of Chicago.

The report states that the receipts of flour last year were more than double those of any former year. A large amount had sought a market at Chicago, that used to find one in St. Louis and other points in the South. Several new brands have been added to the varieties formerly sold; and it is believed that in no other primary market is there so great a variety found. The year closed with a very small stock on hand—only 26,986 barrels. The prices per barrel ranged from $1.50 for spring wheat in June to $6.50 for winter wheat in August.

The tables given above show that the increase of the corn trade has been enormous, being eleven millions of bushels in excess of the receipts in 1860, which were larger than those of any former year. In fact, corn has been a drug in the market most of the year, opening at 30 cents per bushel in January, dropping down to 20 cents in September, and closing at 28 cents in December. It cost the greater part of this to transport the article to market.

There is a small decrease perceptible in the quantity of oats received last year, as compared with 1860, caused by high freights mainly. The crop of last year was a large one; but did not come forward except in small quantities for army supplies and home consumption. Prices varied from 18 to 24 cents per bushel.

The year opened with a comparatively large stock of rye on hand, with prices at 46 cents per bushel. The trade continued dull throughout the year; though shipments were larger than ever before. The extreme prices were 30 and 50 cents per bushel. In the quantity of barley received and forwarded there is a considerable decrease. Prices for first quality varied from 26 to 43 cents per bushel.

In the "hog crop" Chicago is surpassed by Cincinnati alone. The receipts for last year foot up to 675,902 hogs, being one-fifth larger than in any former year. Those which have been cut are said to be unusually heavy, both in the Spring and Fall packing. One lot of 1,014 which came from Bureau county, averaged 310 lbs. each; and the general average was fully 250 lbs. Prices for live animals ranged from $2 30 to $5 50, per 100 lbs.; and of dressed from $2 50 to $6 50.

The number of beef cattle received during the year was 204,579, and forwarded, 124,146. Both aggregates show a moderate increase. Prices of "fine extra to choice" ranged from $2 50 to $4 00 per 100 lbs. The number of cattle packed in 1861 was 53,754, averaging 570 lbs. each.

The annexed table shows the receipts and shipments of most of the products of hogs and cattle in 1861:

	Received.	Forwarded.
Beef, barrels	3,113	50,154
Pork, "	32,495	65,196
Lard, pounds	6,841,940	16,400,822
Tallow, "	789,230	5,816,868
Cut meats "	15,254,013	59,748,388

A review of the timber trade shows that receipts and sales were smaller last year than for several years. This was caused by the depreciation in currency; otherwise the business done would have been satisfactory. The total number of feet of timber received was 249,308,475, of which nearly all came by lake, about 13,000,000 feet going by the great lines of railroad running eastward from Chicago. The number of shingles received was 79,336, and of lath, 82,637 nearly all by lake. About 50,000,000 of the former and 10,000,000 of the latter were manufactured in the city.

The quantity of grass seed received was 7,742,614 lbs.; forwarded, 7,438,435—a moderate increase in both, as compared with 1860.

The tables show a large increase in the receipts and shipments of salt. This was owing to the blockade of the southern ports, cutting off supplies from Kanawha and elsewhere, and bringing that from Syracuse into greater requisition. Considerable quantities had been received in bulk from Canada for packing purposes. The total amount received was 390,420 barrels; forwarded, 319,140 barrels.

Of hides 17,196,293 lbs. were received, against 17,604,078 in 1860 and 18,614,246 in 1859. The aggregate forwarded last year was 12,277,518 lbs.; in 1860, 14,868,514 lbs., and in 1859, 16,418,320 lbs. A greater portion is now tanned at Chicago than in former years.

The traffic in "highwines" continues to increase yearly. Last year, however, shows a decreased consumption in the city, with increased receipts from the country. Prices have ruled low through the year, like that of corn, having ranged from 12 o 20 cents per gallon. The quantity received was 89,915 barrels; manufactured in the city, 56,879; forwarded 111,240 barrels.

Of alcohol the quantity received was 4,513 barrels; shipments, 6,601 barrels.

The following are receipts of miscellaneous articles; lake fish, equal to 15,960 barrels; coal, 211,586 tons; wood, 76,770 cords; lead, 14,554,748 lbs. (and 16,854,706 lbs. forwarded), wool 1,184,208 lbs. (and 1,360,617 forwarded); potatoes 262,406 bushels. The number of bricks received was 14,641,214, a decrease of one-third as compared with the preceding year.

The rates of transportation, both by lake and railroad, ruled higher than for many years. In fact, everything in the shape of a vessel was taken up at liberal rates, while large quantities of produce remained on hand at the close of 1861. To Buffalo and New York respectively the rates for flour ranged from 30 to 80 cents, and from 70 cents to $1 80 per barrel. The range for wheat ran from 6½ to 21 cents per bushel to Buffalo, and for corn from 4½ to 20 cents. For beef and pork to New York the rates have gone up from $1 25 to $2 80 per barrel. By rail to Toledo and Detroit, the rates were: for flour from 40 to 55 cents per barrel; and for wheat, corn, etc., per 100 lbs., 20 to 28 cents. To Buffalo: for flour from 58 to 95 cents; and for wheat, corn, etc., 29 to 47½ cents. To New York: for flour $1 01 to $1.95, and for wheat, corn, etc., 50½ to 97½ cents.

LAKE TONNAGE.

The tonnage of American vessels engaged in lake commerce shows an increase of 7,450 tons during the past year; while that of Canadian vessels shows a *decrease* of 1,050 tons, as shown in the annexed table, which will be read with interest:—

	American—	Tonnage.	Valuation.
65	steamers	42,683	$1,489,800
107	propellers	50,018	2,128,000
91	tugs	9,155	565,700
48	barks	19,616	469,000
75	brigs	22,124	435,900
843	schooners	180,357	4,525,000
1,229	Total	323,953	$9,608,400
	Canadian—		
63	steamers	21,107	$1,019,200
15	propellers	4,562	176,000
22	tugs	4,842	202,800
19	barks	7,153	188,500
15	brigs	4,223	101,000
222	schooners	33,771	822,300
356	Total	75,658	$2,509,300

The pamphlet contains detailed statements of the articles received and forwarded by the Illinois and Michigan Canal and by the various railroads terminating in Chicago; but our space is insufficient to give these. There is also a statement of the banks now in operation, with their various securities; and another of the manufactures of of that city. It appears that 10,613 persons were employed last year in these various establishments, and that the value of their products was $16,948,381. "There seems," says the report, "nothing in the way of our being the largest manufacturing city in the Northwest, being blessed with * * * all advantages necessary for success in this branch of business."

Collingwood and Chicago Route.

The Toronto *Globe* says that arrangements have been completed by which Mr. E. B. Ward puts the propellers Antelope and Montgomery, in commission, on the route between Chicago and Collingwood, in connection with the Northern Railway to Toronto, without any subsidy being paid to him.

Messrs. Holcomb, Cowan & Co., are to put on a line of steamers from Toronto to Ogdensburg, in connection with the Northern Railway.

The wharf at Collingwood is to be lengthened 120 feet; the elevator is to be reconstructed, and its capacity for transference increased to 4,000 bushels per hour. Ample facilities will be given for small and large vessels, so that whether they come from Cape Rock, Owen Sound, Chicago or Milwaukee, they all will be equally well accommodated.

An elevator is also to be erected at Toronto, of

sufficient capacity to load a large vessel in three hours with grain.

New York and Erie Railroad.

STATEMENT OF THE RECEIVER.

The New York and Erie Railroad Company having previously failed to pay at maturity the coupons on the First, Fourth and Fifth Mortgage Bonds, and no provision having been made for the payment of the coupons on the Second and Third Mortgage Bonds, soon to become due; and being unable to provide for the payment of a large amount of unsecured Bonds which had become due by reason of the failure to pay the interest on them, and having other liabilities which it was not able to discharge; the Trustees of the Fourth Mortgage, on the 2d of August, 1859, at the request of certain holders, represented to the Supreme Court that the Company was in a condition of insolvency, and that the mortgaged premises were a scanty security for the mortgage debt, and that the proceeds and profits of the property were likely to be diverted from the proper payment of the interest on the mortgages, and applied to the Court for the appointment of a Receiver of all the effects, property and franchises of the Company, with power to run and operate the Railroad while proceedings for the foreclosure of the mortgages were pending. The application was granted, and a Receiver was appointed, who, having given the required security, entered upon his duties on the 16th of August, 1859. By subsequent orders of Court, his Receivership was extended to the Second, Third and Fifth Mortgages, and he was vested with the like authority by the Courts of Pennylvania and New Jersey over the property of the Company lying in those States. These proceedings were concurred in by the Board of Directors and the representatives of the unsecured bonds.

The order of the Supreme Court appointing the Receiver placed him in possession of the railroad, and of all the real and personal property of the Company, and its powers and franchises.

* * * * * * * *

On taking possession of his trust, the Receiver found the affairs of the Company greatly embarrassed. The income of the road, owing to the depressed state of business generally, and other causes, was barely sufficient to defray the current expenses, while claims for labor and supplies, and judgments rendered before his appointment, and rents and unpaid taxes, were pressing for immediate payment. These claims amounted to more than $700,000. The forbearance of the creditors, and especially of the employes, whose pay was some months in arrears, the and cordial co-operation and aid of the Board of Directors, relieved the Receiver from serious embarrassment; and increased earnings enabled him, in the course of four months after his appointment, to discharge all these claims, and pay the current expenses of the road. Since that time all payments for labor have been made regularly as they became due, and all supplies of the past year were purchased for cash.

The sums due for supplies purchased and labor performed before the appointment of the Receiver, with rents and taxes unpaid, and certain other claims and judgments which he was ordered to pay.

Amounted to	$741,510 14
Interest on 4th mortgage, due April, 1859, unpaid	62,195 00
Interest on 1st mortgage, due May, 1859, unpaid	102,270 00
Interest on 5th mortgage, due June, 1859, unpaid	31,027 50
Interest on 2d and 3d mortgages, due Sept. 1, 1859	350,000 00
Amounting in all to	$1,287,002 64

The payment of this large sum out of the earnings of the road, and provision for payment of the interest in future on the mortgage debt, would have extended the term of the Receiver longer than was contemplated at the time of his appointment; and the uncertainty about the amount of the earnings of the road that could be applied to the payment of mortage interest, and the unwillingness of some of the Second Mortgage Bondholders, whose bonds were past due, to grant any extension, led to an arrangment between the stockholders and creditors for maintaining the mortgage securities, unsecured bonds, and capital stock of the Company. Messrs. Dudley S. Gregory and J. C. B. Davis were appointed Trustees under this arrangement, and to their zealous discharge of the onerous duties of the trust it is mainly owing that the interests of all parties have been preserved, and this valuable property saved from the ruinous affects of a protracted litigation.

The report of these Trustees will be found appended to this statement.* Reference to it will show that, by contribution of coupons on mortgage bonds and cash by the bond and stockholders, the Receiver was relieved from the payment of so much of the mortgage interest that he was able, in the course of a few months, to pay off all arrears of labor and supplies, and resume regular payment of interest on the first and second mortgage bonds, and subsequently to pay a large amount of arrears of interest on the third, fourth and fifth mortgages, whose holders declined to come into the arrangement, as well as to pay the current interest on these bonds as it became due. The last of these payments was made in December, 1861. On representation of this fact to the Court, and with the consent of all parties in interest, the Receiver was authorized to convey all the property of in his possession to the new company, which was done on the 31st day of December.

RECEIPTS AND DISBUSEMENTS.

From Aug. 16, 1859, to Dec. 31, 1861, the cash receipts from all sources were		$19,331,279 14
And the disbursements, including amount deposited for interest, and not called for to Dec. 31		18,845,234 46
Leaving a balance of		$486,044 68
From which deduct expenses for December, paid in January, and included in the following statement		304,592 91
Leaves an available balance of		$181,451 77

EARNINGS AND EXPENSES.

The earnings of the road for the same time were		$13,607,132 10
Expenses incurred prior to Aug. 16, 1859, paid since	$741,510 14	
Expense of operating road to Dec. 31, '61	8,230,318 92	
Rents and taxes	527,343 24	
Rent of Long Dock property	287,794 92	
Expenses of foreclosure, paid by order of court	64,756 17	
Expenses of receivership, paid by order of Court	55,150 22	
Construction expen's.	567,132 12	
Interest on mort. b'ds.	2,871,115 17	
Buffalo branch	30,560 81	
Pavonia ferry	8,105 27	
Excess of material and fuel	41,763 35	
		13,425,680 33
Balance as above		$181,451 77

* The Report of the Trustees was published entire in the Journal of 4th January last; also, the comparative statement of earnings and expenses for the fiscal years ending September 30, 1860 and 1861, alluded to elsewhere in the Receiver's Report. The portions omitted are simply extracts from the order of the Court defining the powers and duties of the Receiver, and a portion of the order of the Court appointing a referee to examine and report on the accounts of the same.

The expenses of operating the road, the purchase of supplies, and all claims and balances against the Receiver to Dec. 31, as far as ascertained, are included in the above statement.

A table, showing the earnings and expenses in detail, will be found appended to this statement. Other tables, showing the comparative earnings and expenses for several years, the items composing the construction account, materials on hand, and materials used in repairs, are also added. As the transportation accounts are, according to law, made up each year to the 30th of September, the table appended to this statement does not include the last three months of the Receivership, while a small portion of his term is embraced in the statement for the year ending September 30, 1859.

The three months ending Dec. 31, 1861, produced a larger revenue than the road ever earned, in the same length of time. The gross earnings were:

October	$718,925 18
November	834,970 13
December	700,794 99

The Receiver was appointed by the Court, after a full hearing of all the parties in interest; and his duties were defined, as far as possible, in the order of his appointment. But in numerous instances it has been necessary for the Receiver to apply to the court for additional powers, and for instructions in reference to the manner of executing those already given him. All these applications have been made on notice to all the parties in interest; and before the Court acted on such applications, all such parties who desired were heard by the Court, and it is believed that in no instance has the Court made an order to which any party, after fully understanding the grounds and reasons of the Receiver's application has continued any opposition. At short intervals from the date of the Receiver's appointment, his receipts, disbursements and accounts, together with all his acts and doings as Receiver, have been subjected to a full and careful examination, by an experienced officer appointed by the Supreme Court; and of such examinations, the several parties have had, in every instance, full notice in witing, and have attended them personally or by their attorneys and counsel, when all the Receiver's books, and papers, and agents were open to inspection and examination, and were examined by all who chose to do so. And on all these repeated occasions his accounts and management as Receiver have been approved, and thereafter adjudged, confirmed, and established by the Court. While the undersigned does not suppose his management of the great and complicated interests committed to his charge, has been by any means free from fault, he does hope that the opportunity, thus given to all to make their complaints before the Court, at the proper time, when he was prepared to explain his policy and conduct, and the general approbation of those who have had the best means of judging of their merits, may justify him in not expecting serious disapprobation from others, and relieve him of all fears of their ultimate judgment upon his management. It may be proper to add that the whole property has passed from his hands, and that he has been finally discharged of all further duty and responsibility, by order of Court, save in respect of some money he was directed to hold to pay certain coupons and to discharge his remaining liabilities on certain outstanding contracts and claims; and this remaining trust will very soon be ended, when without further action on the part of the undersigned, his relations, duties, powers and responsibility, as Receiver, will be entirely terminated.

* * * * * * * *

EXPENSES.

The expenditures for repairs of the road and machinery have been large, though somewhat less than the average of the three years preceding. It has been the aim of the Receiver to put and keep the track and road-bed in good condition, and he believes he has succeeded in doing so. During his term 28,514 tons of new rails, equal to more

than 230 miles, have been laid, and 956,000 new crossties placed in the track. The machinery and cars have been fully kept up. The efficiency of the motive power has been considerably increased by the rebuilding of the older locomotives, and extensively repairing others. Twenty have been adapted to coal burning, with a large saving in the cost of fuel. The cars are in better condition than for several years. A large number of freight cars have been rebuilt, and are now worth more than when originally put on the road.

The expenses of operating the road the current year will be less in proportion to the earnings than they have been the last two years, though the occurrence of two disastrous floods, one in September, on the Western Division, and the other in November, on the Eastern Division, added materially to the expenses of the first three months.

In comparing the expenses of the last two years, it wil' be seen by reference to table that the value of materials on hand is $41,793 35 more than when the Receiver took possession of the road, which excess should be fairly credited to expenses.

CONSTRUCTION EXPENSES.

The sum of $567,232 12 has been charged to construction account in two years four and a-half months.

Of this, $59,207 51 was expended on the Cascade embankment. The work was commenced by the old company, and its completion was required by considerations of safety and economy.

For ferry slips, ferry-houses and boats for the Pavonia Ferry, $62,598 has been expended; For new depot building and necessary tracks at Pateason, and grading of the grounds, $29,861. This expenditure was necessary in consequence of the land on which the old depot stood having been sold, and there being no proper facilities for the accomodrtion of the large business of Paterson at the new station. For land and fences $14,913 75 has been paid. The larger part of this sum was paid by order of Court for lands not previously paid for, though occupied by the road.

The expenditure of $67,151 12 for machine and workshops, machinery in shops, depots and water stations, has mainly been caused by the transfer of the business from Piermont and Jersey City to Long Dock, and the large increase of freight traffic. For new side tracks and switches at Long Dock and at other places on the road, required by the increase of business and the change of terminus, about $25,000 have been expended.

A very considerable portion of the track, particularly on the Delaware Division, had never been ballasted, mainly on account of the want of proper materials. During the Receivership much of the unfinished portions of the track on that Division have been ballasted in the most thorough manner with broken stone and gravel. Where this has been done the expense of ballasting has been charged to construction, and the whole cost of new iron and relaying the track has been charged in current expenses. Four new locomotives have been added to the equipment, and the cost charged to construction. More than enough to cover depreciation has been added to the value of the whole rolling stock, by rebuilding engines and cars, the whole cost of which has been charged to expenses. About seven hundred freight cars have been rebuilt in the best manner, and made capable of carrying more tonnage than when new. The track, rolling stock and structures are believed to be in better condition than they have been at any time since the opening of the road.

LONG DOCK.

Any doubts that may have existed as to the wisdom of the purchase of the Long Dock property, and as to the expediency of the large expenditure required to bring it into use, the experience of the last few months has completely dispelled. In May last the works had so far progressed that some of the passenger trains were run through the tunnel to the new ferry, and in October all the passenger trains commenced running there. A portion of the freight which had heretofore gone to Jersey City was transferred to the Long Dock, and as facilities were furnished, the quantity of freight sent there was increased, till about the last of December, the whole bufiness, freight and passenger, was concentrated there, and no trains, except a local passenger train, have since been run to Piermont. The Receiver is not prepared to state in detail the value of this terminus; but he has no hesitation in saying that the earnings of the road since October have been $100,000 more per month than they would have been without it. The expense of handling and delivering freight are much less than they were when the freight trains ran to Piermont; and greater dispatch is given both to eastward and westward bound freight.

The Receiver is not able to make any exhibit, in figures, of the advantages of the new terminus, as it has been in use for so short a time; but he has no hesitation in expressing the opinion that the saving of expenses over the cost of doing the same amount of business at the old terminns, and the profits of the ferry, will pay the interest on the whole outlay on the Long Dock property.

PAVONIA FERRY.

The charter of the Long Dock Company authorized, so far as the laws of New Jersey could do so, the establishment of a ferry from their property to New York; and a lease having been procured from the City of New York, the Receiver established, about the first of May last, a regular ferry between the Long Dock property, at the foot of Pavonia avenue, and the Erie Railroad Depot in New York, at the foot of Chambers street, immediately opposite the general offices of the Company.

At first the service was performed by one boat, making trips each half hour; but soon after another boat was added, and the trips are now made regularly every fifteen minutes.

The expenses of the ferry have been comparatively large on account of the service being performed for the first four months by chartered boats. Two boats have since been purchased, and a new and very superior boat has been built, and will soon be placed on the ferry. The earnings of the ferry have exceeded the expectations, and have nearly covered the current expenses. With the increase of population and business on and around the Long Dock, this ferry cannot fail to become a source of considerable revenue, and at the same time increase the value of the real estate of the Long Dock Company. The convenience and comfort of passengers, and greater regularity in running the trains, have been secured by the establishment of the ferry, and the want of suitable station accommodation in New York has been supplied by spacious and well-arranged ticket offices, passenger and baggage rooms. The cost of these improvements, and of the ferry slips, and other necessary fixtures in New York, has been paid by the Receiver, and charged to account of construction.

BUFFALO BRANCH.

This road, extending from the main line at Hornellsville sixty miles to Attica, and thirty miles from Buffalo, was purchased at foreclosure sale by the trustees, Messrs. Gregory and Davis, at the request of the Directors of the Erie Railway Company, and the Receiver was authorized to operate it until the re-organization of the Company was completed. The road has been put in good repair, with a line of telegraph, and other improvements, and arrangements made with the Buffalo, New York and Erie Railroad Company, owning the road from Attica to Buffalo, to run passenger and freight trains in connection with the main line between New York and Buffalo. This enables the trains of the Erie Railway to make close connections with the trains of the Buffalo and Lake Huron, the Grand Trunk and Great Western Railways of Canada, and their connections in the Northwestern States. Through this branch the Erie Railroad controls the shortest line between New York and Buffalo, and will be able to command a considerable portion of the traffic between the two cities.

In the organization and general management of the road no material changes were made by the Receiver. The employees of the old Company were retained, and the rules and regulations continued in force, modified only from time to time as circumstances required. The new Company has also retained the employees and adopted the rules and regulations of the Receiver. In this way the road has suffered none of the evils which often follow changes of administration.

In closing the active duties of his trust, the Receiver takes the liberty of congratulating the stockholders that their property has been returned to them in as good condition as when it came into his hands; that the interest on the whole debt has been provided for, and the current interest punctually paid; and that the Directors have assumed the management of the road under circumstances more favorable than have ever existed in its history. The Receiver had money on hand to pay all the expenses of operating the road, including rents and taxes to the 1st of January, besides a considerable surplus to be applied, under the direction of the Court, to the payment of the interest on the mortgage bonds as it becomes due. With the ability to earn more income than ever before, it is hoped the early return of peace and prosperity to the country will so increase the traffic that the road will hereafter earn full interest on the entire capital and debt of the Company.

NATHANIEL MARSH, Receiver.

New York, March, 1862.

Railroad Earnings--Monthly.

The earnings of the Erie Railroad for the month of February, 1862, were $603,020 67
Do., 1861 ..... 391,932 27

Increase. $211,097 40

The earnings of the Norwich and Worcester Railroad for February were as follows:

	1861.	1862.
Passengers	$5,349 46	$5,804 27
Freight	11,175 02	13,059 61
Total	$16,524 48	$18,863 88
Increase		$2,339 40

The statement of the Illinois Central Railroad for February is as follows:

Land Department.

Acres Construction Lands sold	3,491.99 for	$37,343 98
Acres Interest Fund L'ds sold	200.00 "	2,526 88
Acres Free Lands sold	1,860.69 "	24,011 06
Total sales during the month	5,552.28 for	$63,881 84
To which add Town Lot sales		1,109 40
Total of all		$64,991 24
Acres land sold since Jan'y 1, 1862	11,251.92 for	$134,611 98
Acres sold prev'sly (net sales)	1,236,971.08 for	16,161,203 15
Total	1,248,223.00 for	16,292,815 08
Construction bonds canceled previous to January 31		$2,093,000 00
Cash collected in February		17,144 74
258,207 bushels corn received on hand.		
Net collections to Jan. 31, 1862		4,142,313 29

Traffic Department.

Receipts from Passengers	$54,171 39
" Freight	81,203 45
" Mails	6,358 34
" Rent of road	6,333 00
" Other sources	2,742 66
Total receipts for February, 1862	$150,808 84
Do. do. 1861	870,267 90

The above earnings do not include the amount of traffic done for the Government in the transportation of men, supplies, etc.

American Railroad Journal.

Saturday, March 23, 1862.

Share and Money Market.

The week closes with a slight decline in the share market, attributed mainly to the very active movement going on in Governments. Investments run chiefly to these, and their tendency is steadily upward. Erie shares and securities are strong, under favorable advices from England, where they are largely held. New York Central are also pretty firm. There has been a pause, for several days, in military affairs, which has undoubtedly had its effect upon the market. Money has been active, which has also exerted some influence on prices. The new Treasury Notes have not made their appearance, and will not probably, till about the first of April. They must have the effect to make money most abundant. Such is the universal conviction. The earnings of railroads continue favorable, showing a large increase over 1861. The general aspect of affairs is encouraging. Exchange is dull at 111 to 112. Gold is a trifle firmer, selling at 101½ to 102.

Taxes on Travel.

There is one feature in the proposed taxes on travel, which we trust will not escape notice at the hands of our national legislators. It levies the same amount—two fifths of a cent per mile—on second class and "emigrant" passengers as on those carried in first class trains. The Erie Company which transports an emigrant to Buffalo or Dunkirk for five dollars, will have to pay as much for him as for the passenger by an express train. In either case the charge would be nearly one dollar. If the receipts be only one cent per mile, the same deduction will be made from them as if they were double. But at the former rate, it is well known that a road can barely pay its way; and indeed a railroad company could hardly afford to perform the service at all, were it not that the train is apt to be a miscellaneous collection, comprising often a load of empty cars as well as cheap paying passengers.

The manifest injustice, then, of taxing a service which may be considered utterly unprofitable, is such that we hope the scheme of making companies pay for "emigrant passengers" will be abandoned.

In Great Britain, where taxation may be said to have become a distinct science, so completely has it been systematized, the government never thinks of calling upon the railroads for any part of the $350,000,000 which it raises annually by taxes. Travel is as free as the air, in that country. The railroad and the steamboat are required to contribute their quotas indirectly, as are all other descriptions of property. Employees pay a percentage on their salaries, as do all others living on regular incomes. But it would be considered a return to the ignorance and folly of by-gone ages for the government to tax travel by either land or water. Particular circumstances may exist here, requiring a slight departure for a short time from a system which prevails in the United Kingdom; but we consider the departure in this case should be very slight indeed, being neither sound in theory nor likely to work well in practice.

Public Debt of the United States.

We publish elsewhere a statement of the funded debt of the United States, prepared by Charles A. Meigs & Son. It is made up in a different manner from, and presents the facts more in detail than in the previous statement.

Galena and Chicago Railroad.

We give elsewhere an abstract of the recent annual report of this company. The following is a statement of the monthly earnings for the year:

Months.	Freight.	Passengers.	Mails, &c.	Total.
January	$73,695 58	$18,865 11	$4,702 51	$97,263 20
February	53,391 29	18,916 22	4,549 58	76,859 09
March	69,091 72	27,877 69	4,630 83	101,600 24
April	71,060 19	28,318 88	4,415 20	103,794 27
May	131,412 66	29,450 34	4,814 22	165,707 22
June	131,427 63	26,959 05	4,436 54	162,823 22
July	112,586 94	28,336 90	4,465 35	145,389 19
August	120,891 51	25,334 88	4,132 24	150,358 63
September	158,142 09	37,390 62	4,743 23	200,275 94
October	176,516 70	40,028 93	4,780 64	221,326 27
November	137,610 55	30,308 08	4,881 63	172,700 26
December	94,157 42	26,842 24	11,309 30	122,308 96
Totals	$1,319,984 23	$338,550 94	$61,861 27	$1,720,396 49
Operating expenses				909,211 88
Earnings less expenses				$811,184 61
Add surplus Jan. 1, 1861				335,212 01
				$1,146,396 62
Deduct interest, dividend, sinking fund, etc.				721,338 50
Net surplus Jan. 1, 1862				$425,058 11

Out of the net earnings of the past year a dividend of 5 per cent. has been paid. The company have made provision for the payment of its bonds soon to fall due—of which an account was given in the Journal of 7th September last.

Erie Railway.

The following is a statement of the earnings of this road for the first five months of the present fiscal year:

Months.	1861-2.	1860-1.	Increase.
October	$722,362 05	$585,597 59	$136,764 46
November	734,826 10	554,532 25	180,293 85
December	708,136 29	404,276 30	303,859 99
January	695,606 98	404,507 55	291,099 43
February	603,029 67	391,932 27	211,097 40
Totals	$3,463,961 09	$2,340,846 96	$1,123,115 13

Railroad Earnings for January.

The earnings of the railroads of the country for the month of January, 1862, compare very favorably with those for the same month of 1861. The increase in nearly every instance being large. That of the New York and Erie is enormous. This road is having a very profitable winter traffic. The falling off in the earnings of the Illinois Central results from the closing of the Mississippi River, which was open in 1861. The whole show is very satisfactory for the internal commerce of the country.

Roads.	1862.	1861.	Increase.
Erie	$695,606 98	$404,507 55	$291,099 43
Michigan Central	230,159 03	142,333 70	87,825 33

† Decrease. Rate of increase 19 per cent.

Galena and Chicago Railroad.

The gross receipts of this road for the year ending December 31, 1861, were:

From freight		$1,319,984 28
" passengers		338,550 90
" mails, etc.		61,861 27
		$1,720,396 49

And the expenses were:

Repairs of track	$185,968 34	
" bridges	39,399 83	
" buildings, etc.	27,070 96	
" locomotives	67,712 37	
" cars	73,663 61	
Locomotive service	72,848 80	
Train service	55,479 74	
Station service	105,238 19	
Use of cars of other Co's.	9,550 93	
Fuel	104,212 74	
Oil and waste	10,881 44	
Salaries	32,088 57	
Exchange paid	15,482 28	
Damage	9,316 22	
Taxes	54,954 89	
All other expenses	45,392 97	
		909,211 88
Net earnings		$811,184 61
Add surplus January 1, 1861		335,212 01
Add for coupons cut from bonds purchased for sinking fund		2,135 00
		$1,148,531 62
Dividend, January 1, 1861, 5 per cent.		$301,415 00
Interest on 1st mortgage bonds		139,510 00
" 2d " "		103,425 00
Cost of bonds for 2d mort. sink'g fund.		103,274 95
Loss on depreciated currency		35,642 16
Bad and doubtful accounts		14,446 87
Improvement account		25,759 53
Surplus January 1, 1862		425,058 11
		$1,148,531 62

A comparison of the earnings of the past with those of the previous year, shows an increase of $257,644 69; the increase in expenses was $98,720 62—making the increase in net earnings $158,924 07.

The ratio of expenses to earnings for the year has been 52.58 per cent.—showing an improvement in this respect over the previous year, of about 8 per cent.

The loss on depreciated currency which is charged to income account, was caused by the breaking up of the entire banking system of the State—the notes of these banks constituting at the time nearly the entire circulating medium of the State.

The annexed statement will exhibit the financial condition of the company. The length of the entire lines of road is 261¼ miles; double track, 30 miles; siding and gravel pit tracks, 49 miles—making the total length of track 340¼ miles. The construction account remains the same as last year, less $400 deducted for locomotive machinery, and charged machine shops—the amount standing to this account now is $9,354,081 27. One share has been added to the capital stock during the year, by the conversion of outstanding scrip—the amount now is $6,028,400. The funded debt has been reduced $109,497 77, by the purchase and cancelling of $109,000 of bonds for the second mortgage sinking fund, and the payment of $497 77 on account of Litchfield bonds—making the present amount of funded debt $3,414,702 23. This is composed of:

First mort. bonds, due Feb. 1, 1862.		$247,000 00
" " " " Aug. 1, 1862.		157,000 00
" " " " Feb. 1, 1863.		60,000 00
" " " " Aug. 1, 1863.		1,507,000 00
" " " " Feb. 1, 1882.		22,000 00
		$1,993,000 00
Second mort. bonds, due May 1, 1875		1,411,000 00
Litchfield bonds, due on settlement		
St. Charles Air Line purchase		10,702 23
		$3,414,702 23

The whole amount of second mortgage bonds now purchased from current revenues and cancelled on account of sinking fund is $589,000. The report says:

As the outstanding first mortgage bonds of the company, amounting to $1,993,000, fall due within the next nineteen months, and as it was not deemed advisable, if practicable, to pay them out of the current revenues of the road, it was deemed to be for the best interest of the company to extend the time of their payment for twenty years from the first of February next. In accordance with this determination, proposals for their extension were issued, on the 18th of September last, to the holders of these bonds, offering to furnish new sheets of 7 per cent. semi-annual coupon, for twenty years, and in addition to the existing one to execute a further confirmatory mortgage and provide a sinking fund sufficient to retire the whole issue within the time of the maturity of the bonds. In these proposals the right was reserved to pay off the bonds that may be outstanding on the first day of February, 1877, at 5 per cent. above par.

A small number of these bonds have already been extended at par, and an arrangement has been made for extending those which fall due on the first of February, 1862, at par and a small commission. Our securities are viewed with such favor that it is believed that the whole issue will be extended at trifling cost to the company.

The extension of our first mortgage bonds being effected, the finances of the company will be placed upon a very satisfactory footing. Being without floating debt, the entire bonded debt of the company will be extinguished within the next twenty years, with a constantly decreasing annual charge on its finances, for interest and sinking fund purposes. The amount required for these purposes for the past year, has been $346,209 95. The amount required in 1881 will be $250,425 assuming that the bonds, purchased for the respective sinking funds, will cost par upon the average, leaving to be paid on the 18th of Feb., 1882, $117,000, which will leave the company free from debt.

Forty miles of the Cedar Rapids and Missouri River Railroad have been completed, and will be opened for business in the present month of January, making, with the Chicago, Iowa and Nebraska Railroad, a continuous line in operation in connection with ours, from the Mississippi westward, of 122 miles. An additional 30 miles of the first mentioned road have been graded, and will probably be finished during the ensuing summer. This when completed, will extend the road to Marshalltown.

A negotiation has been opened between this and the two last mentioned companies for leasing their line by this company, and thus placing the whole under one management. This negotiation has been thus far without result. It is deemed important that some arrangement should be made, if practicable, for permanently uniting the interests of these companies, and securing the extension of the joint line to the Missouri River, in time to influence the location of the system of railroads which will grow up beyond that river.

Our relations with the Beloit and Madison Railroad Company remain as heretofore. No progress has been made during the year toward the completion of the Sterling and Rock Island Railroad.

The roadbed, track, bridges and buildings have been kept in thorough repair, and are now in excellent condition. The line of road is being continually improved by the substitution of structures of permanent materials, as those of a more temporary character require to be renewed. By timely repairs and renewals, it is believed that the property of the company in the aggregate, is preserved from any deterioration from year to year. We learn from the report that, during the past year, 224,557 feet of oak crossing plank and timber, have been used; 8,014 bars of new iron, and 20,153 bars of repaired iron have been put in the track; 71,466 ties have been laid; 153,196 pounds of railroad spike, 7,032 wrought iron chairs, (11 lbs. each), 7,086 cast iron chairs (30 lbs. each), and 14,639 bolts for cast iron chairs have been used. During the coming year there should be put in the track about 2,500 tons of new rails, and about 100,000 new ties. The company owns about 1,300 tons of iron all told applicable to future repairs of track; it is either on the way to or from the repair shops or the rolling mills, or it is in process of repair or re-manufacture. This stock in trade should be increased rather than diminished. The taking of an injured rail from the track, transporting it to the rolling mills, etc., requires considerable time, and hence a considerable surplus of iron is necessary. The company should be able to re-roll about 2,000 tons annually. A purchase of 500 tons of new iron during the ensuing season will probably make the surplus stock of rails sufficient for this purpose for several years to come. About 14 miles of fence have been renewed, and about 3 miles of new fence built. Most of the new fence is of wire—six No. 9 wires run through holes bored in the posts, which are set about 10 feet apart. This makes an excellent fence, not easily broken through by cattle, nor readily taking fire from the burning of prairie

grass. In the repairs of fencing, 96,862 feet of boards, 7,131 posts, 7,417 lbs. nails, 4,560 lbs. wire, 200 cast iron keys, and 230 gates have been used.

The number of through passengers carried was 34,276; way do., 283,877—total 318,153; number carried one mile 13,749,643. Tons of freight carried, 499,421; tons carried one mile 47,740,877. Miles run by trains, 1,123,454; by C., B. and Q. trains on G. and C. track, 128,880 miles.

Marine Insurance.—What is evidence of Unseaworthiness?

WHEN A SHIP IS DISABLED SOON AFTER SAILING BY A SLIGHT STORM, IT IS EVIDENCE OF UNSEAWORTHINESS—THE PRESUMPTION IS THAT DEFECTS EXISTED IN THE VESSEL AT THE TIME SHE SAILED.

A case involving a principle of evidence in determining the seaworthiness of vessels was recently decided by a General Term of the New York Supreme Court. The plaintiffs had a policy of insurance made by the defendants, the Orient Mutual Insurance Company, upon one-third of their interest in a cargo of coffee from Rio de Janeiro to Charleston, in the barque Susan. The ship sailed from Rio, Oct. 10th, 1855, and shortly after leaving port met with stress of weather, sprung a leak, and put back to Rio. The cargo discharged, the vessel was surveyed, and pursuant to the recommendation of the surveyors was sold. The coffee was stored at Rio, and reshipped in the brig Julia for Charleston, and arrived there January 8th, 1856. The action was brought to recover the defendants' proportion of the general average charges and expenses consequent upon the return of the Susan to Rio in distress, and the transhipment of cargo, and the increased freight thereon etc.

The captain of the vessel testified thus: "The barque Susan sailed from Rio on the 10th of October, 1855. The steamboat towed me to sea not far from seven o'clock in the morning: when the steamer left us, we made all sail to the southward, off shore by the wind; there was a heavy swell heavling in from the south-west; the ship behaved well when we made sail; the wind was light under the land; as we drawed off shore, the wind increased suddenly on us with a sea; the sea increasing at the same time, it caused her to labor heavily and jump into the sea; we took in sail and reduced the canvass as we got off shore; after the barque labored in this way and jumped into the sea, we tried the pumps and found the barque making water; after we tried the pumps we did not succeed in freeing the vessel; then we sounded the pumps and found two feet of water in the hold; we then continued to shorten sail; kept serving the pumps; the leak remained about the same after shortning sail; we had taken everything off her but two topsails, and then we freed her; we wore ship and stood in shore, after the men refused to go any further off shore: I concluded to return to Rio, as the nearest port I could get to; I was from twenty-five to thirty miles from the coast when I determined to put back; the steamtug took me about four miles outside the harbor; before I turned to go back, it blew a strong double-reefed topsail breeze." At 9 A. M. of the 10th of October the steamtug was discharged and the barque proceeded to sea; at 1 P.M. she was put back to the port of Rio.

The plaintiffs obtained a verdict and a judgment. The defendants then moved for a new trial, which motion was denied. From this order denying the motion made for a new trial, an appeal was taken to the General Term of the Court, which decided, first, that where a ship soon after sailing on her voyage, becomes so leaky or disabled as to be incapable of proceeding upon it, and this cannot be ascribed to any violent storm or extraordinary peril of the seas, the fair and natural presumption is that it arose from causes existing at the time she sailed, and that she was then unseaworthy; and second, that a verdict in favor of the assured, found upon evidence raising this presumption of unseaworthiness, will be set aside as contrary to the evidence.

The following is a part of the opinion of the court delivered at the decision of the cause covering the point involved:

ROBERTSON, J.—The inadequacy of the perils encountered to produce the sea damage in question to a seaworthy vessel, was relied upon by the defendants to establish unseaworthiness, to which they added evidence of age and the character of the materials of which the vessel was built, and of worm holes in her planking above the copper.

The plaintiffs established the thorough repair of the vessel at the port which she left on her previous voyage to the port from which she sailed on the voyage in question; also her sound appearance and tightness before starting, and claimed from that, with the perils encountered as described by her captain, and the damage thereby done to her masts and spars, indicating their violence, to have established injury by extraordinary perils to a seaworthy vessel. It will thus be seen that the degree of violence of the perils is material to either view, and, in effect, the essential point of the case, as there is no direct evidence of unseaworthiness. If she was unseaworthy, the leak may be fully accounted for without extraordinary perils; on the other hand, if the perils were extraordinary, the deduction of unseaworthiness from the facts proved is not necessary to account for the leak. * * * * * *

The vessel in this case returned into port, after going about twenty-five to thirty miles to sea, during four hours, and arrived in port three days after she sailed; the character of the weather and her action on her return are given. She started under full sail, while a heavy swell was heaving in from the southward, "but the wind increased suddenly' and the sea increasing at the same time, caused her to labor and jump into the sea;" this apparently immediately followed the increase of wind and waves, but how long such "labor" and "jumping" continued does not appear. After it the vessel was found to take in water. Sail was then taken in, and the canvass reduced, until only two topsails remained; but when, during what time or why, does not appear. A leak then began, when does not appear, but which remained about the same after shortening sail; the place of that leak was never found, notwithstanding three surveys, after her return. There is a singular want of definiteness, minuteness, and particularity, in the description by her captain, the only witness examined as to the perils, of what occurred during the four hours before the vessel changed her course back. No account is given when or how her masts were sprung, or to what extent she labored or jumped. The wind is described as being merely a "strong, double reefed topsail breeze," not a gale or a storm; the very fact of calling it a breeze, and giving it a special character goes to show that it was one of not an uncommon kind; and that it was one which was taken advantage of, although with diminished canvass. All the cases I have cited show greater perils than these, and no one can doubt that the ocean has been traversed, myrids of times, in perfect safety with such a breeze; and few seaman would hesitate to encounter a similar one on every voyage. But it may be said, the springing of the foremast maintopsail yard, and maintopmast fid, stranting of topgallant backstays and loss of tressle-trees, with the starting of a head knee, prove the violence of the wind, which would be true, if they occurred before her changing her course towards the port of departure, and before the leak, which was as violent at the beginning as at the end of the blow. We have no information as to the state of the weather on her return to port. Such injuries might have been the result of having old timber, spars or rigging, the rusting of bolts or fastenings, or a heavily laden vessel, with a leak, at the rate of twelve inches an hour, pitching and rolling in the rhe trough of a sea. The leak is the turning point in the history of the vessel if the violence of the winds and waves was sufficient to have created it in a seaworthy vessel, the plaintiffs are entitled to recover; but there is no evidence to prove it. I do not think, therefore, it is any strech of the prerogative of the court to assume to know enough of nautical matters to hold that such a leak could not be created by such a breeze, in a seaworthy vessel, and that there was no evidence of such perils as were insured against. The judgment, therefore, must be reversed, with costs; leaving the defendant the right to a new trial.

From Newton's London Journal, February, 1862.

On the Manufacture of Cast Steel, and its Application to Constructive Purposes.

By Mr. Henry Bessemer, of London.

The mode of manufacturing cast steel, which now forms so important a branch of the Sheffield trade, was discovered in the year 1740 by Mr. Benjamin Huntsman, of Handsworth, near Sheffield, who subsequently established steel works at Attercliffe, where his invention has ever since been successfully carried on. In its early stages many difficulties had, however, to be overcome. Materials for lining the furnaces and for making the crucibles had to be sought for and tested; the peculiar marks of iron most suitable for melting had to be determined on by numerous experimental trials; and such was the difficulty at that time of making crucibles which would stand the excessive heat of melted steel, that for a long period only very highly carbonized or "double converted" steel, which required the lowest temperature, could be successfully melted. The first products of a new manufacture, even while the invention still remains in a partially developed state, but too frequently stamp its subsequent character. Thus Huntsman's cast steel, although it was acknowledged to be a pure homogeneous metal, of great value for certain purposes, was still looked upon as a hard and brittle material of very limited use, not bearing a high temperature without failing to pieces, and quite incapable of being welded: even within the last few years this has been the popular idea of cast steel. Improvements in its manufacture have, however, from time to time been introduced, and steel of a milder and less brittle character has long been made, capable of welding with facility, and working at a high temperature without falling to pieces. Its uses have consequently been greatly extended, and the employment of cast steel for the best cutlery and edge-tools has now become universal; indeed, the excellent quality of the cast steel at present made in Sheffield for these purposes is scarcely to be surpassed. Of late years several of the most enterprising manufacturers have sought to introduce cast steel for a variety of other purposes besides those for which it was originally employed, and it is now used, in some form or other, in almost every first-class machine. Its employment as a material for founding bells and various other articles in clay moulds, as carried out by Messrs. Naylor & Vickers, and the introduction of a valuable material by Messrs Howell & Shortridge, under the name of homogeneous metal, are prominent examples of the successful adaptation of cast steel to engineering purposes.

The manufacture of cast steel by Huntsman's process is so extensively practised, and is so well known, that it is unnecessary to do more than to recall to mind that crude pig iron has first to go through all the stages of melting, refining, puddling, hammering, and rolling, in order to produce a bar of malleable iron as nearly pure as the most careful manipulation in charcoal fires can make it. Bar iron, on which so much labor, fuel, and engine power have been expended, thus becomes the raw material of this most expensive manufacture. In order to convert the wrought iron bars into blister steel, they are packed with powdered charcoal in large fire-brick chests, and are exposed to a white heat for several days, the time required for heating and cooling them extending over a period of fifteen to twenty days. When thus converted into blister steel, they are broken into small pieces and sorted, according to the quality of the steel, which sometimes differs even in the same bar. For melting this material, powerful air furnaces are employed, containing two crucibles, into each of which are put about 40 lbs. of the broken blistered steel. In about three hours the pots are removed from the furnaces, and the melted steel is poured into iron moulds, and formed into ingots of cast steel; from 3½ to 4 tons of hard coke being consumed for each ton of metal thus melted. When large masses of steel are required, a great many crucibles must be got ready all at the same moment,

* Interest on these Notes will cease after April 7th, when they will probably be paid.

and a continuous stream of the melted metal from the several crucibles must be kept up until the ingot is completed, since any cessation of the pouring would entirely spoil it; hence, in proportion to the size of the ingot, are the cost and risk of its production increased. The ordinary manufacture of cast steel is therefore obviously conducted at a great disadvantage. If cast steel is to supersede wrought iron for engineering purposes, it will be necessary to cease employing wrought iron as a raw material for this otherwise most expensive mode of manufacture.

The extremely high temperature requisite to maintain malleable iron in a state of fusion, has, from the earliest period of the history of iron down almost to the present day, rendered its purification in a fluid state practically and commercially impossible. Hence arise all those imperfections to which bar iron is subject, every small piece consisting of numerous granules partially separated from each other by scoria, and every large mass being produced only by piling together small bars, with the inevitable result of increasing the former imperfections; for no two pieces of iron can be brought to a welding heat without becoming coated with oxide; and when this coating is rendered fluid by welding sand, a fluid silicate of the oxide of iron is formed, covering the entire surface to be united. The heavy blows of the hammer or the pressure of the rolls may, and do, extrude the greater portion of this fluid extraneous matter, but it is never wholly removed from between the welded surfaces, and hence a portion of the cohesive force of the metal is lost at every such junction. When a bar of iron is nicked on one side and bent, the rending open of the pile clearly shows this want of perfect cohesion. Nor is this the only difficulty to be encountered; for in the production of large masses of wrought iron it is necessary to raise the temperature nearly to the fusing point, in order to render each additional piece sufficiently soft and plastic to become united to the bloom. This softening of the iron induces a molecular change in the structure of the metal: its natural tendency to crystallize is so powerfully assisted by the long continuance of the high temperature, that its whole structure undergoes a change; large and well defined crystals are formed almost independently of each other, and cohering so feebly to the other contiguous crystals, as in some cases to separate with as little force as would overcome the cohesion of ordinary cast iron.

In the substitution of cast steel for malleable iron, both these sources of difficulty are escaped; for the mass, whether of one ton or twenty tons weight, may be formed in a fluid state into a single block, wholly free from admixture of scoria, while it is perfectly and equally coherent at every part, and the forging of such a solid block of metal into shape is only the work of a few hours; and as there is no welding of separate pieces, it may be worked under the hammer at a temperature at which no molecular change will take place; the metal being far below its fusing point, and much too solid to undergo that destructive crystallization so common in large masses of wrought iron. Thus the difficulties and uncertainty attending the production of all large masses of wrought iron are wholly avoided in producing equally large masses of cast steel.

But, however desirable in the abstract it may be to employ cast steel as a substitute for malleable iron for engineering purposes, it must not be forgotten that there are several important conditions indispensable to its general use. First, the steel must be able to bear a good white heat without falling to pieces under the hammer, otherwise the process of shaping it will not only be expensive, but the partly finished forging may be spoiled at any moment by being overheated. Secondly, the steel should be of such a tough character as to admit of being twisted or bent into almost any form in its cold state before fracture takes place, whether the force be applied as a gradual strain or by a sudden impact. Thirdly, it should have a tensile strength at least 50 per cent. greater than that of the best marks of English iron. Fourthly, it must especially be soft enough to turn well in the lathe, to bore easily, and to yield readily to the file and chisel, so as not to enhance its original cost by the difficulty of working it into the requisite forms. This last is most commercially and practically an important condition, and one which will in future greatly determine the extent of its use.

These desirable objects are believed by the author to be fully accomplished by his process of converting crude pig iron into cast steel at a single operation, forming the subject of the present paper. This process has now been in daily operation in Sheffield for the last two years at Messrs. John Brown & Co.'s Atlas Steel Works, Sheffield.

The crude pig iron chiefly used in this process has been the hotblast hæmatite pig smelted with coke, which is melted in a reverberatory furnace, and is then run into a vessel, in which its conversion into steel is to be effected. The converting vessel is made of stout boiler plate, and lined with a powdered silicious stone found in the neighborhood of Sheffield below the coal, and known as "ganister." The rapid destruction of the lining of the converting vessel was one of the great difficulties met with in the early stages of the invention: the excessive temperature generated in the vessel, together with the solvent action of the fluid slags, was found to dissolve the best fire-brick so rapidly, that sometimes as much as two inches thickness would be lost from the lining of the vessel during the thirty minutes required to convert a single charge of iron into steel. The ganister now used, however, is not only much cheaper than fire-bricks, (costing only about 11s. per ton in the powdered state,) but it is also very durable. [A portion of the lining of the vessel was shown, which had stood ninety-six consecutive conversions before its removal.] The converting vessel is mounted on bearings which rest on stout iron standards, and by means of the gearing and handle it may be turned into any required position. It has an opening at top for filling and pouring out the metal, and in the bottom of the vessel are inserted seven fire-clay tuyeres, each having seven holes. The blast from the engine is conveyed through one the bearings of the vessel into the tuyere box, at the bottom of the vessel, and enters the tuyeres at a pressure of about 14 lbs. per square inch, which is more than sufficient to prevent the fluid metal from entering the tuyeres.

(To be continued.)

The Grand Trunk and Great Western Railways of Canada.

A noticable feature of the week has been a very decided improvement in Canadian railways, owing to a notification forwarded to the Stock Exchange, on Saturday afternoon, by Messrs. Baring Brothers & Co., that the Grand Trunk and Great Western Railway Companies of Canada —viz., Mr. Head on behalf of the Great Western, and Mr. Watkin on behalf of the Grand Trunk Railway, authorized by the respective boards, have completed the heads of an agreement for the fusion of the receipts of the two Companies, and for the admission of the Buffalo and Lake Huron —should that company so elect—into a general agreement. The heads of the arrangement have been unanimously approved by the two companies, and so soon as they have been referred to Canada for the completion of some details, they will be laid *in extenso* before the proprietors of each company in London.—*Canadian News.*

ENGINEERING WORKS.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 13 ft.	Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.			14.	"	20 "	1½ to 1
3.	Base 13 ft.	Slopes	1½ to 1	15.	"	24 "	¼ to 1
4.	" 14	"	1½ to 1	16.	"	24 "	1½ to 1
5.	" 15	"	¼ to 1	17.	"	25 "	1½ to 1
6.	" 15	"	1 to 1	18.	"	26 "	1½ to 1
7.	" 15	"	1½ to 1	19.	"	28 "	¼ to 1
8.	" 16	"	¼ to 1	20.	"	30 "	1 to 1
9	" 16	"	1 to 1	21.	"	30 "	1½ to 1
10.	" 18	"	¼ to 1	22.	"	30 "	1½ to 1
11.	" 18	"	½ to 1	23.	"	32 "	1 to 1
12.	" 18	"	1 to 1	24.	"	32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

Interest on Appleton Extension bonds	12,880 00	
Interest on debt	10,818 63	
Taxes	22,179 94	
Discount, exchange, insurance, etc	22,180 16	
	573,298 21	
Surplus, March 1, 1862	$217,171 88	
Surplus, April 1, 1861	323,580 64	
Total surplus	$540,752 52	
Unfunded debt	$269,606 52	

Trade and Commerce of Detroit.

The statement of the trade and commerce of Detroit for 1861, shows a very great increase upon any former year in the production of the leading staples of export. Reducing the flour to wheat, the aggregate receipts of grain last year amounted to 10,514,286 bushels, against 6,441,639 in 1860, and 4,177,856 in 1859. It will be seen that the first almost equalled the other two added together. In fact, the receipts of flour and grain in 1859, were nearly equa'led by those of 1861, during the months of September and October only.

The report represents the condition of Michigan at this time in a very favorable light, in spite of the various adverse influences that operated last year. The State, as a whole, is said to enjoy a degree of prosperity which she had not known for half a dozen years previously.

The receipts of flour and the sources of supply for the past year are as follows:

By Michigan Central Railroad, bbls.	872,756
By Detroit and Milwaukee Railroad	363,616
By Detroit and Toledo Railroad	63,347
By Great Western Railway	603
By Grand Trunk Railway	1,246
Coastwise	3,255
Canada, by sail	1,281
Total imports	1,306,104
By teams, estimated	15,000
Manufactured by city mills	42,500
Total	1,363,604

The shipments were 1,261,289 barrels, the greater part of which were forwarded by railroads.

The receipts and shipments of flour for the past five years are as follows:

	Receipts. bbls.	Shipments. bbls.
1857	482,192	479,160
1858	582,287	505,917
1859	605,640	478,918
1860	862,175	809,519
1861	1,321,140	1,261,289

In the early part of the year the prices of wheat and flour ran down to a very low figure, and so continued without any great alteration until the fall, when an enormous demand arose. The crop in Michigan was harvested in prime condition, in striking contrast with that of the preceding year. That pest known as the *wheat fly*, has entirely disappeared since 1859.

The want of storage facilities at Detroit, which had long been felt, will occasion a drawback no longer. A spacious elevator has been put up at the terminus of the Detroit and Milwaukee Railroad; two others were completed during the year, and other enterprises of the same kind are said to be in contemplation.

The receipts of wheat the past year, and the sources of supply, are as follows:

By Michigan Central Railroad, bush.	1,610,318
By Detroit and Milwaukee Railroad	717,729
By Detroit and Toledo Railroad	120,147
By Great Western Railway	414
By Grand Trunk Railway	4,012
Coastwise	1,253
From Canadian ports	51,238
By teams, estimated	500,000
Total	3,005,111

The total shipments were 2,775,077 bushels, of which 380,039 went forward by railroad, and 2,381,380 by lake. There were ground in city mills 191,000 bushels.

The average price of wheat in Detroit during the past year was $1 06½ per bushel, against $1 10 in 1860; $1 25 in 1859; $0 92 in 1858; $1 23½ in 1857; $1 12 in 1856, and $1 75 in 1855.

The crop of corn was the largest raised in many years. Of this cereal the total receipts were 1,036,506 bushels, nearly all by the Michigan Central Railroad. The total shipments were 989,309 bushels, of which three-fourths went by lake. The corn receipts for 1861 were equal to those of the two previous years combined. Average price per bushel, 36 5-6 cents, or less than half of what it was in 1857.

The receipts of oats during the past year amounted to 389,986 bushels, two-thirds of which were forwarded by lake. The aggregate receipts show a slight increase over those of 1860, and the exports a small falling off. The drought of last summer had an unfavorable effect on this crop. Average price per bushel, during the year, 21¼ cents. Of barley the receipts were 59,734 bushels, nearly all consumed. The quantity of ale manufactured from it is estimated at between 40,000 and 45,000 barrels. Malt has been steady at 80 cents. Of rye the receipts were 16,981 bushels, and the exportations about 10,000 bushels. Average price per bushel, 42 cents.

Some of the remaining articles of export we shall be obliged to give in briefer compass. The receipts of dressed hogs cannot be stated, as the "crop" did not begin to move till late in the season. Of beeves about 2,200 were purchased, mostly for the army. The receipts of butter were lbs. 3,327,673. The potato crop was small, having suffered seriously from rot. Considerable quantities of hay are now annually sent from Detroit to the Lake Superior country.

The receipts of cattle and hogs for the year were:

	Cattle.	Hogs.
By Michigan Central R. R.	57,653	93,313
By Detroit and Milwaukee R. R.	1,884	7,022
By Detroit and Toledo Railroad	11,908	28,380
By Grand Trunk Railway	40	116
By lake	146	175
Total	71,631	129,956
Received in 1860	70,856	61,590

The total shipments were—cattle, 63,874; hogs, 110,059, much the greater part going by the Great Western and Grand Trunk Railways.

The wool clip of 1861 was large; but political events induced many farmers to hold it for higher prices than could be obtained in spring. The total receipts at Detroit amounted to lbs. 5,453,821.

The city of Detroit is now a place of some considerable importance as a manufacturing point. In this department of industry the report makes mention of coal oil, of which was refined the value of $450,000, chemicals, edge-tools, woolen factories, leather, tobacco, stores, and various other factories, besides the numerous saw-mills and mining works scattered over the State, all pouring their products into the commercial capital of the State. Ship-building is also an important interest in that important lake point.

Broadway Railroad.

To the Editors of the Am. Railroad Journal.

If the subject of a Broadway Railroad is not too local in its scope to commend itself to your columns I beg to make a few brief suggestions. I have carefully perused the reports of the discussions before the Legislative Committee, and with all due deference to the eloquence of the counsel engaged and the monied influence which has been brought to bear on both sides of the question, I can only come to the conclusion that these gentlemen have pulled a night cap over their ears and gone to sleep over the real question at issue. While one side is strenuously arguing as an abstract question, the great superiority of the railway car over the omnibus as a public conveyance, rehashing and rehearsing what every body has been ready to admit for years, and what has been much better argued a hundred times before, the other side is quite as strenuously endeavoring to ignore every modern improvement and to prove that the old antiquated omnibus lumbering over the rough pavements which it is constantly wearing out and making rougher, is really the perfection of a public vehicle, and that nothing else has yet been devised that could fill its place. The fact that thirty to forty millions of passengers per annum are carried in our street cars is held up by the one side as an incontrovertible argument that a railroad in Broadway without any connections whatever, except by transfer to side lines of these same old antiquated omnibuses, is the only thing required to perfect our system of public conveyance, while the other side ignores this fact, as proving anything to the advantage of the cars and insists that a railway in Broadway would be a nuisance without as I can see giving any reason whatever for the assertion. As an example of the immense amount of practical knowledge brought to bear upon the question you will notice that at the last meeting of the committee on the bill now before the Legislature, some of the prominent champions wishing to be particularly nice in figures, went to splitting inches as to the space between any two passing cars, and a serious discussion arose as to whether it was four feet seven and nine-sixteenths inches or one foot seven and five eighths inches!!!! So far as the arguments *pro* and *contra* have progressed, they would be as applicable to a railroad from Stewart's store to the St. Nicholas Hotel. Who would not say on the one side, that such a railway would be a nuisance, and yet who would not say on the other side that as an abstract question the railway will carry the same number of passengers with a less number of vehicles occupying less room in the street, create less noise and dust, be safer and easier for ingress or egress, and less inconvenient to all other travel as well as to pedestrians. A railway is a nuisance when it does not accommodate the business of the city. It is not a nuisance when it does accommodate this business, and the simple question, which seems to have been entirely overlooked, is whether a railway in Broadway upon the plan now proposed will accommodate this business. It is proposed as I understand it, to construct a road from the Battery to some indefinite point up town say for instance Central Park, and to drive the omnibuses out of the street entirely. If the entire travel now through Broadway was to and from points on that street or in its immediate vicinity, not a question could arise in my mind as to the advantages of such a railway, but the fact that not one-tenth of the travel is of such a character, but that more than nine-tenths is to and from districts at long distances on either side of Broadway is to me quite as conclusive that a simple Broadway Railroad forcing every passenger to or from these districts, to transfer to reach their destination would be a nuisance in the most comprehensive sense, a vexation to the entire traveling public, a detriment to the business of Broadway, and of no sort of advantage to any interests except those of the other railways, to which would be driven an increased amount of travel. The sum total of convenience which such a railway would provide would be simply for travel between any two points in Broadway, and the sum total of inconvenience would be, that the facilities we now have for reaching remote points would be gone. We certainly cannot have both stages and railway cars in this street. That is quite out of the question. We must have one or the other exclusively, and if by means of the railway, we can reach, without transfer, the districts now reached by stages, there can be no question that the railway in every sense would be a great public convenience. Nor can it be understood how in any view such a railway would be detrimental to the business of Broadway. If it can be so constructed and provided with such laterals as will accommodate all the districts now reached by the omnibuses, can it be doubted that it will secure that travel? If the travel is retained in Broadway, how is it possible that the business of the street is to be injured? The whole question is reduced down to the simple point, of the inconvenience to other vehicles, and this is disposed of so far as space is concerned by facts so indisputable that it is unnecessary to spend words upon it. The opposers of the railway allege that a line of cars in the middle of the street would force all other vehicles in the street into two lines, one on the one side going up and one on the other side going down. It might be considered a sufficient reply to this, to say that this division of vehicles is the plan now adopted whenever the street is crowded.

Would it be any more objectionable after a railway is constructed than it is now? But this is a sort of bugbear satisfactory enough to those who imagine a railway to be a Chinese Wall through the middle of the street, or who choose to assert without reason that there will be a continuous line of cars with the horses of one sticking their noses into the doors of the next. If such a double procession of cars will be required for the travel, there could be no better argument for driving out the omnibuses, for to accommodate such an amount of travel in them, would leave no room for any other vehicle in the street.

The Broadway Railroad can be made to accommodate the lateral districts now accommodated by omnibuses by a very simple plan and thus avoid any necessity whatever for these vehicles.

Let there be cross lines from the East to the North River through certain streets commencing say at 14th street, another through 23rd, another through 34th, and so on at proper intervals. Let cars from either end of these crossing lines start at such prescribed intervals as will bring them to the main trunk at the required distance apart, and thence turn into Broadway. An occasional transfer car upon these cross lines might run directly across from river to river, thus connecting all the north and south lines, so that a person upon the East river, for instance, desiring to go to any point upon the Eighth Avenue Railroad, has only to take one of these cars until he arrives at Eighth Avenue. There receiving his transfer ticket, he rides for a single fare to his destination. Such a system of cross lines with the proper arrangements for running cars and transferring passengers would not only make the Broadway Railroad what it should be if built at all, but would bring all our railways into one grand and comprehensive system accommodating the entire population, avoiding the use of omnibuses save in exceptional cases, and relieve the city from an outlay of hundreds of thousands of dollars per annum in the wear and tear of pavements.

I am very well aware that in reply to such a suggestion we shall have the hue and cry of making "a gridiron of the city"—but what is the city now but one vast net work of delapidated cobble stone streets. I am unable to see anything but arguments in favor of cars over omnibuses in every respect so far as the vehicles are concerned, and if the roads are properly constructed with the shallow grooves adopted in modern rails which are found amply sufficient, the objections to the railroads are obviated. We have not a single proper rail in any of our street railways, and hence it is not surprising that objections

should be made to them, but there is no difficulty in so constructing them that the wheels of ordinary vehicles can enter and leave them at any angle without wrenching. I have no hesitation in asserting my belief that a railway in Broadway as now proposed would be a public calamity, but that such a railway with proper laterals and connections as suggested would be a public blessing. If some such plan can be devised, let it not be the subject of a lobby scramble before the Legislature, but let the people of the city, to whom the streets belong, have all its benefits equally distributed among them, the poor man as well as the wealthy. Let there be no more chance for grasping at grants for railways at a fixed rate of fare, either gratuitously, or for an agreed compensation to the city, but let them be farmed out to the *lowest* bidder, to those parties who under proper bonds will fulfill all the requirements of the grants and carry passengers at the *lowest* rates of fare.

It is only by such a system of railways and by such a disposal of the right to operate them, that the advantages of our modern and improved means of travel can be fully enjoyed in Broadway as elsewhere and their benefits properly and equitably distributed.

CIVIL ENGINEER.

Railroad Earnings--Weekly.

The Michigan Central earned in the 2d week in March, 1862 ..... $33,513 33
Do., 1861 ..... 32,707 60

Increase $805 73

The following are the earnings of the Buffalo, New York and Erie Railroad for the first two weeks of March, 1862 ..... $33,240 76
Do., 1861 ..... 21,681 24

Increase $11,559 52

The earnings of the Galena and Chicago Railroad the 2d week in March, 1862, were. $21,657 60
Do., 1861 ..... 23,985 81

Decrease $2,328 21

The earnings of the St. Louis, Alton and Chicago Railroad for the 2d week in March, were:
1862 ..... $17,783 29
1861 ..... 21,937 73

Decrease $4,154 44
Total since Jan. 1, 1862 ..... $163,638 92
Do. do. 1861 ..... 196,919 96

Decrease $33,281 04

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 2d week of March 1862, were $10,461 16
Corresponding week, 1861. ..... 5,830 82

Increase $4,630 34

The earnings of the Cleveland and Toledo Railroad for the 3d week in March, 1862, were. $24,450
Do., 1861 20,520

Increase $3,980

The receipts of the Grand Trunk Railway of Canada for the week ending March 15, 1862, were:
11,828 passengers $24,985 86
Mails and sundries 2,709 28
12,351 tons of freight and live stock .. 48,282 22

Total $75,977 36
Corresponding week, 1861 ..... 72,807 78

Decrease $3,169 58

The traffic of the Great Western Railway of Canada for the week ending March 21, 1862, was as follows:

Passenger $14,128 27
Freight and live stock 34,046 07
Mails and sundries 1,624 69

Total $49,799 03
Corresponding week of last year. 52,471 33

Decrease $2,672 30

The Chicago and Rock Island Railroad earned the 3d week in March, 1862 ..... $15,439
Do., 1861 22,902

Decrease $7,463

La Crosse and Milwaukee Railroad.

The earnings of this road for the fiscal year ending December 31, 1861, were—

From Freight	$766,685 29
" Passengers	261,655 45
" Mail	20,150 00
" Express and Miscellaneous ..	22,331 12
	$1,070,821 86

The expenses paid by operating department were—

Renewal of track	$71,026 39	
" bridges	19,248 00	
Repair of roads	79,345 72	
" locomotives ..	56,762 32	
" cars	62,689 18	
" buildings, ...	5,211 37	
Locomotive service	60,721 17	
Train "	45,864 49	
Station "	73,314 75	
Fuel "	51,000 37	
Oil and Waste	16,260 43	
Foreign agencies	15,236 05	
Commissions, etc.	32,713 72	
Salaries	10,737 96	
Loss and damage	8,899 48	
All other operat'g exp's	23,187 05	
		640,218 45
Net earnings (40.20 per cent.)		$430,603 41
Add balance Dec. 31, 1860		254,232 86
Balance to new account		$684,836 27

The proportion of ordinary expenses to earnings was 51.37; of extraordinary, 8.43—total 59.80. The value of supplies and materials on hand for future use amounts to $89,555 07—the cost of which is embraced in the above statement of expenses. During the year, 11.66 miles of track have been laid with new material and ballasted, which, with the new track laid in 1860, makes a continuous new track from Milwaukee to near the the 14th mile-post. Repairs on other portions of the road have been kept up, and upwards of 100 tons of damaged rails taken out of the track, repaired and replaced, and 19,000 old ties removed and others substituted. There is now on hand, for an early resumption of the work of renewing track, 419 tons of rails, 5,900 cross ties, 88,575 lbs. of chairs, and 51,440 lbs. spike, valued at $25,083 33, the cost of which is included in the item stated above as the expenditure for renewal of track in 1861. There have been erected 4 truss bridges, 178 feet in length, and 1,425 feet of pile bridging built. Several arch culverts have been substituted for trestle work. About 23 miles of the eastern, and 47 miles of the western division, have been fenced on both sides with a board fence.

At Milwaukee, to accommodate the increased business of the road, a lot has been purchased, and a warehouse erected, 206 feet front, and 26 feet on the east side and 166 feet on the west side; and another, 220 feet in length and 50 feet in width, with a platform on each side 6 feet wide. A wood shed has also been built, 396 feet in length by 37 feet in width. At La Crosse the warehouse has been enlarged by an addition of 100 feet in length and 45 feet in width, and the dock line extended 150 feet. The space between the depot and baggage rooms, 50 by 65 feet has been covered with a roof, and a shed roof 32 by 280 feet built over the levee. A platform resting on piles 150 by 80 feet has been constructed for the accommodation of the local business at La Crosse. An elevator has been erected at this station capable of storing 50,000 bushels of grain, and of receiving and discharging 25,000 bushels daily.

Estimates have been made for construction and renewals during the year, viz.: for grading, $9,620; ballasting, $7,750; bridging and culverts, $19,112; rails, chairs, spike, cross-ties, etc., for renewal of track, $88,111; buildings, $12,560 50; fencing, $37,200—making a total of $174,353 50.

The Trustees of the sinking fund report that they have purchased during the year first mortgage bonds of the eastern division to the amount of $24,000, which with the amount previously reported, show that that there are now in the hands of trustees bonds to the amount of $72,500.

During the year there have been added to the rolling stock three first class and one second class locomotives, and ninety box freight cars—forty of which were purchased, and fifty built at the shops of the company. The equipment now consists of 31 locomotives; 17 first class, 5 second class and baggage combined, 3 baggage, 3 mail and express, 482 freight and 54 hand cars and 2 snow plows, all of which are in condition for immediate use. The general account of the Receiver is as follows:

Net earnings from June 10, 1860		$684,836 27
Balance due other roads		36,433 95
Amount due on account		24,859 78
" " pay rolls		25,006 99
		$771,136 99
Balance due at taking possession of the road		$43,330, 77
Amount due from P. O. depart. U.S. Gov. and State of Wisconsin		42,638 26
Due from agents, etc		5,846 93

Receiver—H. CROCKER.
Manager—E. H. GOODRICH.

Vermont and Massachusetts Railroad.

This company is a consolidation of the Vermont and Massachusetts, the Brattleboro' and Fitchburg, and the Greenfield and Fitchburg Railroad Companies. The consolidation was effected on the 22d of November, 1844. The construction of the road was commenced in 1845, and the section from Fitchburg to Baldwinville, 21 miles, opened in September, 1847; from Baldwinville to Athol, 12 miles, in January, 1848; from Athol to Grout's Corner, 15 miles, in December, 1848; and to Brattleboro', 21 miles, in February, 1850. The whole length of the main line is 65 miles. The Greenfield branch, 8 miles, was opened in the latter part of 1850. The share capital authorized was $3,200,000, of which $2,214,225 15 has been paid. Funded debt, $991,125. The amount originally issued was $1,052,502 59; of which $61,377 59 have been retired. It consists of first mortgage 6 per cent, coupon bonds, dated July 1, 1856, and payable July 1, 1865, interest payable semi-annually at the company's office in Boston. The mortgage provides for an issue of $1,100,000. They were issued to retire bonds falling due January 1, 1856, to the amount of $1,000,000. For the retirement of these bonds a sinking fund was created by the annual payment thereto of $10,000 which has been regularly made and invested in the bonds of the company. The road has cost, including everything charged to the construction and equipment of the main road and branch, $3,516,910 61.

The gross earnings of the road for the fiscal year ending November 30, 1861, have been:

From passengers	$55,906 60
" freight	90,931 10
" rent of joint use of road from Fitchburg to Ashburnham, and of engine house, water tanks, station buildings, etc.	39,000 00
" mails, express, etc.	14,810 68
	$200,648 38

And the expenses were:

Repairs of road	$17,387 04	
" bridges	2,863 37	
" buildings, etc.	2,704 38	
" locomotives	12,829 80	
" cars	13,507 28	
Transportation expenses	38,573 61	
Iron for renewals of track	4,860 42	
Rent to Conn. River R. R.	1,500 00	
All other expenses	10,684 41	
		104,909 81
Net earnings		$95,738 57
Interest for the year		56,387 49
Balance		$39,351 08

—applicable to the reduction of the debt.

Compared with the previous year, the gross earnings show a decrease of $54,177 99, with a decrease in expenses of $31,180 15—making the decrease in net earnings, $22,997 84. The number of miles run in 1860 was 101,326; in 1861, 90,539—decrease, 10,787.

The company own 11 locomotives, 9 of which have the modern improvements for the saving of fuel; 8 passenger, 5 baggage, and 179 freight cars, none of which require any repairs. The road bridges and buildings have been well taken care of. The trains have been run with regularity, and no passenger has been injured during the year.

The following will show the financial condition of the company at the close of the past fiscal year:

Capital stock	$2,214,225 15
Mortgage bonds outstanding	991,125 00
Unpaid bills	593 54
Balance of income, Nov. 30, 1860	481,608 71
Earnings for the year ending Nov. 30, 1861	200,648 38
	$3,888,200 78
Construction	$4,516,910 61
Machine shop stock	7,869 89
Fuel	5,960 00
Sinking fund—five instalments	50,000 00
Cash	3,357 40
Notes receivable	71,461 38
Amount of bonds retired	61,377 59
Balances due the company	9,960 61
Operating expenses	104,909 81
Interest account of the year	56,387 49
	$3,888,200 78

The following statement will show the gross earnings, operating expenses, and net earnings from commencement:

	Gross earnings.	Operating expenses.	Net earnings.
1847	$6,292	Operated by	$6,292
1848	63,000	Fitchburg Co.	63,000
1849	166,696	$84,432	82,264
1850	203,122	136,713	66,409
1851	180,613	100,141	80,477
1852	218,679	132,511	86,168
1853	244,323	158,022	86,301
1854	276,523	150,816	124,707
1855	268,726	181,421	87,305
1856	259,671	149,146	110,425
1857	247,471	151,844	95,627
1858	225,079	120,042	105,037
1859	246,798	140,481	106,317
1860	254,826	136,089	118,737
1861	200,648	104,909	95,739
	$3,061,472	$1,746,667	$1,414,805

President—James Cheever.

Directors—James Cheever, John J. Swift, D. N. Carpenter, Joseph Goodhue.

Treasurer—John Rogers.

Superintendent—Otis T. Ruggles.

Certificates of Indebtedness.

The following are the rules established by the Secretary of the Treasury, in accordance with the act of Congress, approved 1st inst., "to issue certificates of indebtedness to public creditors:"

Congress having authorized the issue of certificates of indebtedness by the Secretary of the Treasury, in payment of audited and settled demands against the Government, as well as in payment of checks or drafts drawn by disbursing officers upon amounts placed to their credit with the Treasurer of the United States, in favor of creditors who have furnished supplies, etc., and who are willing to receive such certificates in satisfaction of their demands, the following regulations are presented, and will be strictly observed in the execution of the act:

The certificates of indebtedness will be payable to the claimant or creditor of the Government, or his order, and in the denominations of $1,000 and $5,000. Certificates of the larger denominations will be issued in all cases where the nature of the claim will admit of it. A book will be opened by the Treasurer of the United States, in which shall be kept a record of each certificate issued under authority of the act; the name of the person to whom issued; the date, number, and amount thereof; on what account; if on Treasury warrant, the number thereof, and if on draft or check of a disbursing officer, the name of the officer by whom drawn, the date and amount of such check or draft, &c.

The certificates shall be signed by the Treasurer, and countersigned by the Register of the Treasury, who shall also keep a complete record of said certificates, as required of the Treasurer. If issued upon a warrant, they will bear even date therewith; or if to a disbursing officer, then with the date of the presentation of his check or draft on the Treasurer of the United States.

When the Secretary of War or Navy may desire to leave a credit on the books of the Treasury in favor of a disbursing officer of his Department, he will draw his requisition on the Secretary of the Treasury in the usual form for the amount desired to be placed to the credit of such disbursing officer, and specify the appropriation properly chargeable.

Upon such requisition being received at the Treasury Department, a warrant will issue to the Treasurer, and he will accordingly place the amounts to the credit of the disbursing officers named, who will then be authorized to draw checks or drafts thereon to the amount of such requisition, in favor of such creditors entitled to payment by him as may desire to receive such certificates in satisfaction of their respective demands.

The checks or drafts of disbursing officers will be in the following form:

$———. ———, 1862.

The Treasurer of the United States will pay to ——— or order, on certificates of indebtedness, —— dollars, being amount due for ———; as will appear by bill and receipt therefor, in my possession, and which will be rendered as a voucher in my accounts for the —— quarter of this year.

(Signed) ———.

To F. E. Spinger, Treasurer of U. S.

As the certificates of indebtedness are only to be issued in payment of creditors, and for amounts liquidated and actually due them, the disbursing officer before drawing his check for draft on the Treasurer, will take the same voucher from the creditor, and will, in all respects, be subject to the same responsibilities as if making payment in coin or United States notes.

The requisition in favor of the officer will be charged on the books of the accounting officer, as other requisitions, and vouchers will go into the general accounts of the disbursing officer, and be settled with other accounts.

Detroit and Milwaukee Railroad.

We understand that W. A. Berkey and J. N. Breseed have contracted with the Detroit and Milwaukee Railroad Company to build a new passenger depot, 80x80 feet, by the 20th day of May next. A new, large, convenient and finely finished depot building will soon cover the ground recently made waste by fire.—*Grand Rapids Eagle*, 17th.

Baltimore and Ohio Railroad.

Such has been the extraordinary progress made in the rebuilding of such portions of the Baltimore and Ohio Railroad as were destroyed by the Rebels, that the entire line of road from Baltimore to Wheeling will be open to-morrow. Merchants and other business men are officially informed that the Company is prepared to-day to receive either way freight or merchandise consigned to the West. The road is now amply protected by a strong military force, and it is not likely that any further interruptions to travel will soon occur.—*Balt. Am. 24th.*

Atlantic and Great Western Railroad.

The Jamestown (N. Y.,) *Journal*, announces the resumption of work on the Atlantic and Great Western Railroad. Squads of laborers are already on the line between Corry and Meadville, where a full force will soon be placed, and a partial force on the line in Ohio.

Milwaukee and Minnesota Railroad.

We understand new efforts are being made by the western stockholders to free this company from the litigation which has hung over it for the past two years, and that to accomplish so desirable a result some of our best citizens have been induced to go into the board of directors. We learn that John H. Tweedy, John P. McGregor, Eliphalet Cramer, and John S. Rockwell, Esqs., have been elected directors in this company, and that this has been brought about by the action of some of our influential property owners to secure to this city the advantages which it derives from this important road, and we are also happy to say that the eastern directors that resigned to accomplish this result, did so in the best of feeling, and with a request that the above named gentlemen would consent to fill their places, which has been done; and that they already entered on the discharge of their duties, with confidence in their abillity to save the road to the city, as a whole, and not allow it to be diverted into hostile channels, as has been contemplated; and that in the end something reasonable will be saved to the stockholders.—*Milwaukee Sentinel.*

From Newton's London Journal, February, 1862.

On the Manufacture of Cast Steel, and its Application to Constructive Purposes.

By Mr. Henry Bessemer, of London.

(Continued from p. 221.)

Before commencing with the first charge of metal, the interior of the converting vessel is thoroughly heated by coke, with a blast through the tuyeres to urge the fire; when sufficiently heated, it is turned upside down, and all the unburnt coke falls out. The vessel being now turned to nearly a horizontal position, melted pig iron is run in from the furnace by the spout, the vessel being kept in such a position, during the time of filling, that the holes of the tuyeres will be above the surface of the metal. When the proper charge of iron has been run in, the blast is turned on, and the vessel is quickly moved up into a vertical position. The blast now rushes upwards into the fluid metal from each of the 49 holes of the tuyeres, producing a most violent agitation of the whole mass. The silicium, always present in greater or less quantities in pig iron, is first attacked, and unites readily with the oxygen of the air, producing silicic acid; at the same time, a small portion of the iron undergoes oxidation, and hence, a fluid silicate of the oxide of iron is formed—a little carbon being simultaneously burnt off. The heat is thus gradually increased until nearly the whole of the silicium is oxidized, which generally takes place in about twelve minutes from the commencement of the process. The carbon of the pig iron now begins to unite more freely with the oxygen of the air, producing at first a small flame, which rapidly increases, and in about three minutes from its first appearance a most intense combustion is going on: the metal rises higher and higher in the vessel, sometimes occupying more than double its former space, and in this frothy fluid state, it presents an enormous surface to the action of the air, which unites rapidly with the carbon contained in the crude iron, and produces a most intense combustion, the whole mass being, in fact, a perfect mixture of metal and fire. The carbon is now burnt off so rapidly as to produce a series of harmless explosions, throwing out the fluid slag in great quantities; while the combustion of the gases is so perfect, that a volumnous white flame rushes from the mouth of the vessel, illuminating the whole building, and indicating, to the practised eye, the precise condition of the metal inside. The blowing may thus be left off whenever the number of minutes, from the commencement and appearance of the flame, indicate the required quality of metal. This is the mode preferred in working the process in Sweden. But, at the works in Sheffield, it is preferred to continue blowing the metal beyond this stage, until the flame suddenly drops, which it does just on the approach of the metal to the condition of malleable iron: a small measured quantity of charcoal pig iron, containing a known proportion of carbon, is then added, and thus steel is produced of any desired degree of carburation; the process having occupied about twenty-eight minutes altogether from the commencement. The converting vessel is tipped forwards and the blast shut off for adding this small charge of pig iron; after which, the blast is turned on again for a few seconds.

The spout of the vessel is then depressed, and the fluid steel is run into the casting ladle, which is carried by a hydraulic crane, it being counterbalanced by a weight on the opposite end of the jib. When all the metal is poured out of the converting vessel, the crane is raised by water pressure and turned round, for the purpose of running the steel into ingot moulds. Instead of tilting the casting ladle for pouring into the moulds, it is made with a hole in the bottom, fitted with a fireclay seating, and closed by a plug of fireclay forming a conical valve. The valve rod is coated with loam and bent over at the top, and works in guides on the outside of the ladle, with a handle for opening and closing the valve. By thus tapping the metal from below, no scoria or other floating impurities are allowed to run into the mould, and the stream of fluid steel is dropped straight down the centre of the mould right to the bottom, without coming in contact with the sides of the mould. The moulds are made of a slightly tapered form, so that as the ingot contracts in cooling, it liberates itself from the mould completely on all sides; and the mould is removed by being lifted off the ingot when sufficiently set. The moulds are arranged in the moulding pit in an arc of the circle described by the casting ladle.

By this process from one to ten tons of crude iron may be converted into cast steel in thirty minutes, without employing any fuel except that required for melting the pig iron, and for the preliminary heating of the converting vessel; the process being effected entirely without manipulation. The loss on the weight of crude iron is from 14 to 18 per cent. with English iron worked in small quantities; but the result of working with a purer iron in Sweden has been carefully noted for two consecutive weeks, and the loss on the weight of fluid iron, tapped from the blast furnace, was ascertained to be only 8¾ per cent. The largest sized apparatus at present erected is that in use at the Atlas Steel Works, Sheffield, the converting vessel being capable of receiving four tons at a time, which it converts into cast steel in 28 minutes. In consequence of the increased size of the converting vessel, in this case, no metal is thrown out during conversion, and the loss of weight has fallen as low as 10 per cent., including the loss in melting the pig iron in the reverberatory furnace.

Specimens of this manufacture, as carried on at the author's works in Sheffield, were exhibited, consisting of a piece of the pig iron employed, which is No. 1 hot-blast hæmatite made with coke; also, a portion of an ingot of very mild cast steel, broken under the hammer to show the purity and soundness of the metal in its cast unhammered state; and an ingot, partly forged, to show how little work with the hammer will produce a forging from these solid blooms of steel. There were also two pieces of steel of the quality employed for making piston rods, which had been bent cold under a heavy steam hammer to show the toughness of the metal: It required very much more force to bend it than would be required to bend wrought iron, but, notwithanding this additional rigidity, it will yield to any extent without snapping. The tensile strength of this soft and easily wrought metal is as much as forty tons per square inch, or from 15 to 18 tons greater than that of best Yorkshire iron. In turning, planing, boring, and tapping, it will be found that the uniformity of its quality will be less trying to the cutting tools than the hard reeds and sand cracks met with in the common qualities of malleable iron. The above tensile strength of the piston rod steel, however, is by no means the maximum, but, on the contrary, is nearly the minimum strength of the steel converted by this process; but, at the same time, it possesses nearly a maximum degree of toughness; for every additional ton in tensile strength, obtained by the addition of carbon, hardens the steel for working, renders it more difficult to forge, and brings it nearer to that undesirable state when a sudden blow snaps it like a piece of cast iron.

From tables compiled from experiments made at the Woolwich Arsenal, it appeared that after hammering or rolling, the steel or highly carbonized metal exhibits a mean tensile strength of 68 tons per square inch, but from its hardness and unyielding nature, it is totally unfit for many purposes; while the iron or entirely decarbonized metal is so soft and copper-like in its texture as to yield to a mean tensile strain of 32 tons per square inch, a point unnecessarily low, except in cases where a metal approaching copper in softness is required. The soft, easy working, tough metal, of the quality used for piston rods, is therefore believed by the author to be the most appropriate material for general purposes; while the hard steels that range up to a tensile strain of 50 or 60 tons per square inch should be avoided as altogether too expensive to work, and too dangerous to be employed in any case where sudden strains may be brought upon them.

With reference to the employment of the mild cast steel for constructive purposes, there are few applications of more importance than that which has recently and successfully been made to the construction of steam boilers. The Cornish boiler, as improved by Mr. Adamson, of Hyde, near Manchester, has a large flue tube constructed with narrow plates more than 12 feet long, extending round the flue in one length, and flanched at each edge in a manner which, while it adds greatly to the stability of the flue, demands such qualities in the material employed for its manufacture as are completely found only in metal that has undergone fusion, and has become perfectly homogeneous throughout. A practical illustration of the excellence of this mode of constructing boilers and the powerful strains which the new steel is capable of sustaining safely, is afforded by the steam boilers employed for some time past at Messrs. Platt's works at Oldham, where six of these boilers are in daily use; they are 30 feet long and 6⅛ feet diameter, and the flue is 4 feet diameter; the plates are 5-16 inch thick, and the working pressure 100 lbs. per square inch.

The advantages of cast steel are still more marked in the construction of the fire-boxes of locomotive engines. The difficulty of flanching and shaping this work in plate iron without splitting the metal at some part, is so great as to have rendered the employment of copper necessary hitherto for this purpose; but the shape required can now be obtained with ease and certainty by hammering up a sheet of metal rolled from one of the cast ingots, such as that now exhibited. One of these fire-box plates, flanched by Mr. Anderson, is also shown, and clearly illustrates the facility with which the new metal may, under skilful hands, be wrought into any required form. The perfect continuity of the material and its entire freedom from joinings or weldings also obviously render it specially suitable for the tube plates of locomotive engines; for, however near the holes are made to one another, there is no danger of their having a flaw or other weak place between them. Nor is it in the construction of the boiler alone that the cast steel may be employed with advantage in locomotives: the axles, whether plain or cranked, the piston rods and guide bars, and last but not least, the wheel tyres, are all exposed to so much abrasion, and to such sudden and powerful strains, that a tough strong material capable of withstanding this destructive wear and tear, is imperatively demanded for the satisfactory construction and economical working of the engine.

The special aim of the author during the first year of his labors, and which throughout the last six years has never been lost sight of, was the production of a malleable metal peculiarly suitable for the manufacture of ordinance. By means of the process that has been described, solid

blocks of malleable cast steel may be made of any required size, from 1 to 20 or 30 tons weight, with a degree of rapidity and cheapness previously unknown. The metal can also, with the utmost facility, be made of any amount of carburation and tensile strength that may be found most desirable. Commencing at the top of the scale with a quality of steel that is too hard to bore, and too brittle to use for ordnance, it can with ease and certainty be made to pass from that degree of hardness, by almost imperceptible gradations downwards, towards malleable iron; becoming at every stage of decarburation more easy to work and more tough and pliable, until it becomes at last pure decarbonized iron, possessing a copper-like degree of toughness not found in any iron produced by puddling. Between these extremes of temper the metal most suitable for ordnance must be found; and all qualities are equally cheap and easy of production.

From the practice now acquired in forging cast steel ordnance at the author's works in Sheffield, it has been found that the most satisfactory results are obtained with metal of the same soft description as that employed for making piston rods. With this degree of toughness the bursting of the gun becomes almost impossible; its power of resisting a tensile strain being at least fifteen tons per square inch greater than that of the best English bar iron. Every gun, before leaving the works, has a piece cut off the end, which is roughly forged into a bar of 2 inches by 8 inches section, and bent cold under the hammer, to show the state of the metal after forging. Several test bars cut from the ends of guns recently forged were exhibited.

The power of this metal to resist a sudden and powerful strain was illustrated by a piece of a gun muzzle, which was one of several tubular pieces that were subjected to a sudden crushing force at the Royal Arsenal, Woolwich, under the direction of Col. Wilmot. The pieces were laid on the anvil block in a perfectly cold state, and were crushed flat by the falling of the steam hammer, but none of them exhibited any signs of fracture when so tested. Probably the best proof of the power of the metal to resist a sudden violent strain was afforded by some experiments made at Liege by order of the Belgian government, who had one of these guns bored for a 12 lbs. sperical shot of 4¾ inches diameter, and made so thin as to weigh only 9¼ cwts. This gun was fired with increasing charges of powder and an additional shot after each three discharges, until it reached a maximum of 6¾ lbs. of powder and eight shots of 12 lbs. each or 96 lbs. of shot, the shots being thus equal to about one-tenth the weight of the gun. It stood this heavy charge twice, and then gave way about 40 inches from the muzzle, probably owing to the jamming of the shots. The employment of guns so excessively light, and charges so extremely heavy, would of course never be attempted in practice.

Some idea of the facility of this mode of making steel ordance is afforded by the time occupied in the fabrication of an 18-pounder gun exhibited to the meeting. The melted pig iron was tapped from the reverberatory furnace at 11·20 A. M., and converted into cast steel in 30 minutes; the ingot was cast in an iron mould 16 inches square by 4 feet long, and was forged while still hot from the casting operation. By this mode of treating the ingots, their central parts are sufficiently soft to receive the full effect of the hammer. At 7 P. M., the forging was completed, and the gun ready for the boring mill.

The erection of the necessary apparatus for the production of steel by this process, on a scale capable of converting from crude iron enough steel to make 40 of such gun blocks per day, will not exceed a cost of £5000, including the blast engine; hence the author cannot but feel that his labors in this direction have been crowned with entire success: the great rapidity of production, the cheapness of the material, and its strength and durability, all adapt it for the construction of every species of ordnance.—*Proceedings Insti. Mech. Engineers, July* 31, 1861.

Financial Strength of the Country in a Period of War.

The ease with which the country has borne the vast load placed upon it has agreeably disappointed the most sanguine believers in its financial strength. It has shown where this lay, and that secession carried off no considerable portion of it—not enough to weaken perceptibly the government, or the people. As an almost universal rule, war contracts to a ruinous extent the industries and commerce of a people, and in an equal degree, weakens its means. But the one in which the government is engaged left the foreign commerce of the country entirely free, which from a fortunate concurrence of circumstances, has proved since the rebellion broke out, highly prosperous. There has been a steady and active demand for our crops that have been most bountiful, the exportation of which have kept foreigners constantly in our debt. The internal trade of the country has been equally active and prosperous. The movement of produce and merchandise upon 30,000 miles of railway and canal in the north, has not been interrupted for a single moment by a hostile force, or by the fear of such. The avocations of 20,000,000 of the people were never more uninterruptedly pursued. War, consequently, brought none of the ordinary consequences of war. Those waged so long between France and England had a direct effect to impair, to a very great extent the resources of each, so that the indirect losses were far greater than any that met the eye, or could be accurately computed. But almost any burden may be borne by a people who are free in all their industries, and in all the articulations of their commerce and trade.

The strength displayed by the United States is chiefly to be attributed to its unrivalled system of public works. The commerce of these is almost the only thing that can give us anything like an adequate idea of the extent of the wealth of the country. Take for example the commerce of the railroads of New York. The total tonnage, with value of the same, transported over these works the past year was as follows:

Articles.	Tons carried.	Value of same.
Products of the forest	540,079	$10,801,580
" animals	1,067,070	213,414,000
Vegetable food	1,220,332	61,016,600
Other Agricultural products	221,201	3,318,130
Manufactures	568,691	142,175,251
Merchandise	719,017	359,508,500
Other articles	1,124,111	11,741,110
Totals	5,460,409	$801,475,141

The tonnage of the canals of the State is fully as great as that of the railroads. The aggregate for both will equal 11,000,000 tons, having a value of $1,000,000,000. The tonnage of vegetable food for both railways and canals will equal very nearly if not quite three millions of tons, or 150,000,000 bushels.

The total mileage of the railways in New York engaged in the transportation of freight is 2,654 miles; in the Northern States 22,500 miles. At one-half the tonnage of the New York roads, the total of the roads of these States will exceed 22,500,000 tons, excluding such articles as coal. Estimating the value of such freight to be only $100 per ton, the total would be $2,250,000,000. In other words the value of the freight transported over the railroads of the Northern States exceeds 100 to each inhabitant. The value of such as go over their navigable water courses are nearly as great, making the aggregate value of the internal commerce, of the Northern States exceed $4,000,000,000; a sum six times greater than the entire foreign trade of the country.

These facts are given to show that the apparent, only represents the real financial strength of the country. Capital is abundant because it is created as fast as it is spent, even in a period of war. With this brought to a close the public securities of the country should have a value never before possessed. The strength and power of the government has been subject to a test to which no weak one can be put and survive. We are no longer an aggregation of States, but a nation. The war has shown that the wealth of the country is in the loyal States, and that all the taxes necessary to the support of Government can be borne by loyal subjects. The debt will be an institution—a tie, binding all parts of the country together. The amount likely to be issued, is not so great as ultimately to affect the market value of the securities, and it will not be long before this will, like all securities of solvent governments, sell at rates that will yield the purchaser the lowest rate of interest ruling. For some 16 years the U. S. 6 per cents. sold on an average of 118, at which price they produced an interest of only 4½ per cent.

Supplemental Treasury Act.

The following is an official copy of the Act Supplemental to the Treasury Act of March 1st, adopted by Congress, and approved by the President on the 16th inst:

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the Secretary of the Treasury may purchase coin with any of the bonds or notes of the United States, authorized by law, at such rates and upon such terms as he may deem most advantageous to the public interest; and may issue, under such rules and regulations as he may prescribe, certificates of indebtedness, such as are authorized by an act entitled "An act to authorize the Secretary of the Treasury to issue certificates of indebtedness to public creditors," approved March 1, 1862, to such creditors as may desire to receive the same, in discharge of checks drawn by disbursing officers upon sums placed to their credit on the books of the Treasurer, upon requisitions of the proper Departments, as well as in discharge of audited and settled accounts, as provided by same act.

Sec. 2. *And be it further enacted*, That the demand notes authorized by the act of July 17, 1861, and by the act of Feb. 12, 1862, shall, in addition to being receivable in payment of duties on imports, be receivable, and shall be lawful money and a legal tender, in like manner, and for the same purpose, and to the same extent, as the notes authorized by the act entitled "An act to authorize the issue of the United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," approved Feb. 25, 1862.

Sec. 3. *And be it further enacted*, That the limitation upon temporary deposits of the United States notes with any assistant treasurers or designated depositaries, authorized by the Secretary of the Treasury, to receive such deposits, at five per cent. interest, to twenty-five millions of dollars, shall be so far modified as to authorize the Secretary of the Treasury to receive such deposits to an amount not exceeding fifty millions of dollars, and that the rates of interest shall be prescribed by the Secretary of the Treasury not exceeding the annual rate of five per centum.

Sec. 4. *And be it further enacted*, That in all cases where the Secretary of the Treasury is authorized by law to reissue notes, he may replace such as are so mutilated or otherwise injured as to be unfit for use, with others of the same character and amount; and such mutilated notes, and all others which by law are required to be taken up and not reissued, shall, when so replaced or taken up, be destroyed in such a manner and under such regulations as the Secretary of the Treasury may prescribe.

American Railroad Journal.

Saturday, March 29, 1862.

Broadway Railroad,

No Bill now before the Legislature of this State is of greater public interest than that establishing a railroad in Broadway. The project is not one of mere local importance, but is in fact national, for it is a project which if carried out is destined to change the entire mode of travel through the grandest highway on the continent. We call attention to a very able and interesting communication upon this subject in another column believing the new views and suggestions contained in it, worthy of the most attentive consideration.

We feel that the street railways offer the best possible mode of transport through our streets, but we are nevertheless aware that constructed as they are—mere isolated lines all running in parallel directions—they do not provide that universal and comprehensive system so much needed. Any plan by which all the lines including that projected through Broadway can be brought into such a system, we believe will obviate the only remaining objection that now exists to the entire extinguishment of the clumsy and inconvenient stages which now crowd our streets and create the inconvenience to, and oftentimes entire stoppage of, all traffic through Broadway.

☞ The usual meeting of railroad managers, for the preparation of the Summer time-tables, will be held in this city on Wednesday, 9th April, at 10 a. m., at the St. Nicholas Hotel. The meeting is called by Erastus Corning, President N. Y. C. R. R. Co.; Nathaniel Marsh, President N. Y. & E. R. R. Co.; W. H. Clement, President Little Miami R. R. Co.; Sam. Sloan, President Hudson River R. R. Co.

Terre Haute, Alton St. Louis Railroad.

The Terre Haute, Alton and St. Louis Railroad was sold at auction on the 25th inst. by order of the United States District Court. It was purchased by Robert A. Bayard, S. J. Tilden and others, for the benefit of the bondholders, for $800,000.

Interest and Dividends.

The Philadelphia, Wilmington and Baltimore Railroad Company have declared a semi-annual dividend of four per cent. payable on and after the 1st of April.

The Hartford and New Haven Railroad has declared a quarterly dividend of $2 50 per share, payable on the 1st of April. The transfer books will be closed from the 25th inst. to that day, both inclusive. Stockholders in this city will receive the payment at the Union Bank.

The interest warrants on Bonds of Marion County, Ohio, maturing April 1, 1862, will be paid at the Irving Bank, New York City, from 1st to 10th April.

The Coupon Bonds of the City of Covington, issued to Covington and Lexington Railroad Company, due January 1, 1860, will be paid on presentation at the Bank of America.

It is understood that the gold for the payment of the 1st of April interest on the 7 3.10 per cent. notes has already been provided. The amount required is about $1,800,000.

The Comptroller of the State of New York gives notice that the interest of the State debt, due the 1st of April next, will be paid in coin.

The Eaton and Hamilton Railroad has deposited in the Lafayette Bank at Cincinnati $11,051, being the July, 1861, instalment of interest on $300,000 second mortgage bonds, with the interest on the coupons for nine months.

Holders of 1st mortgage bonds of the Ohio and Pennsylvania Railroad Company, the Ohio and Indiana Railroad Company, and the Fort Wayne and Chicago Railroad Company, who have not heretofore deposited their bonds, under the plan of reorganization, are notified to do so on or before the 1st day of April next, or they will be excluded from its benefits. Holders of 2d mortgage bonds of the said companies, or Construction Bonds of the Pittsburg, Fort Wayne and Chicago Railroad Company, who have not already deposited their bonds as above, are notified to make application to the Purchasing Committee to be admitted to the benefits of said reorganization, on or before the same day, or be excluded therefrom.

The interest on the fourth mortgage bonds of the Erie Railway Company, due on the 1st of April next, will be paid on that day, on presentation of coupons at the office of the Treasurer in Erie-place.

At the same time and place, the holders of the certificates of D. S. Gregory and J. C. B. Davis, Trustees, will receive payment of the coupon of the fourth mortgage bonds, due Oct. 1, 1861, with interest from May 1, 1861 to April 1, 1862.

New York Central Railroad Co.

At a recent meeting of the Directors of this Company, Edwin D. Worcester, who for eight years past has filled the post of principal bookkeeper in the Treasurer's office, with acknowledged ability and faithfulness, was appointed Assistant Treasurer of the Company; and Robert L. Banks was appointed its Secretary. Both appointments, we learn, were made unanimously, and there can be no doubt that the appointees will prove to be reliable and valuable officers.

At the special request of the Directors, Mr. Pruyn who has been temporarily in charge of the Treasurer's Office since June last, remains at its head; the detail duties being devolved upon the Assistant Treasurer.—*Albany Argus.*

New York and Erie Railroad.

From the tables appended to the Report of the Receiver, published by us last week, we compile the following, showing the annual earnings and expenses of the road from 1852 to 1861 inclusive, with the cost of repairs of track and railway, and of engines and cars:—

	Earnings.	Expenses.	Repairs road.	Rep'rs equip.
1852	$3,537,766 53	$1,895,168 10	$243,471 29	$278,546 74
1853	4,318,962 36	2,407,373 13	398,397 85	431,893 88
1854	5,859,958 68	2,742,615 57	512,584 68	560,582 14
1855	5,448,993 37	2,695,744 87	496,171 15	386,894 90

La Crosse and Milwaukee Railroad.

We give elsewhere an abstract of the report of the Receiver of this road. Below is a statement of the monthly earnings from January, 1858, to December 31, 1861, inclusive:

	1858.	1859.	1860.	1861.
January..	$24,236 17	$35,193 45	$32,883 56	$53,698 46
February..	20,035 38	35,603 25	36,669 76	45,689 31
March	26,264 56	36,380 64	44,269 15	52,159 15
April	33,690 49	38,788 38	50,532 28	67,244 82
May	42,879 43	46,860 81	69,623 47	118,471 85
June	43,876 54	49,999 67	50,780 05	108,002 71
July	47,609 01	33,216 46	35,426 05	84,286 87
August.....	37,682 12	44,603 60	52,570 34	76,318 64
September.....	68,301 55	90,391 81	89,847 12	112,484 82
October	61,554 52	111,240 46	147,191 73	171,063 10
November	55,001 98	89,528 03	95,816 25	116,995 68
December	36,823 05	44,697 50	50,866 04	69,276 46
	$492,453 80	$665,493 56	$756,475 75	$1,070,821 86

DIVISION OF EARNINGS.

	1858.	1859.	1860.	1861.
Proportion to—Eastern Division ..	$425,293 34	$508,631 27	$526,277 30	$749,961 33
" Western " ..	67,159 46	161,862 29	230,198 45	320,870 53
	$492,453 82	$666,493 56	$756,475 75	$1,070,821 86

The proportion of expenses applicable to the former is about $447,757 40; and to the latter, $192,461 01—the net earnings are, therefore, $302,193 93, and $128,409 52 respectively. The Western, or Land Grant Division, is chargeable with the following items as per Receiver's account:

Land Grant mortgage	$45,000 00
Half of rolling stock purchased	73,994 95
Right of way and real estate	14,689 37
Insurance, taxes and legal expenses ..	5,829 45
La Crosse elevator and depot extension	18,267 50
Helfenstein mortgage	3,451 33
	$161,232 60

The above charges do not include the use of rolling stock belonging to the Eastern division, which is estimated at $50,000.

Railroad Earnings--Monthly.

The earnings of the La Crosse and Milwaukee Railroad for January and February, 1862, compared with the corresponding months of the previous years have been as follows:

1862,	January.	February.
Eastern division	$45,441 34	$38,433 01
Western "	15,613 49	16,352 71

Profit for the previous 2 months	186,839 83	234,817 92
Total net profit 3 mos.	$257,020 59	$349,289 17

Pennsylvania Canals.

The water was admitted into the Union Canal on Saturday, and navigation will commence this week. The prospect for a brisk trade during the coming season is said to be encouraging. The proposed arrangement between the bondholders and general creditors has been defeated by two or three of the bondholders opposing it. The management of the canal consequently rests in the hands of Trustees. The net revenue from tolls, last year, was $90,263 61. The expense of the Trustees were, $58,868 27. The company seems to be suffering greatly from litigation. The report says: "The 'costly, continued and wearisome litigation' adverted to in the last report is now in full operation, and to what extent it will use up the money that ought to have been distributed among the bondholders, can only be determined by the result."

The Susquehanna Canal, north of the Junction, will open navigation about the 25th inst., giving transportation from the coal regions to tide water earlier than usual.

The Juniata Canal will be open about the first of April.

The Tide Water Canal will be open and in navigable order by the 20th inst.—*Harrisburg Telegraph.*

Great Western (Ca.) Railway.

We learn that the Directors of the Great Western Railway have instructed their Chief Engineer to make a survey of the best line from Sarnia Branch to the center of the oil wells on Bear Creek, in the township of Enniskillen. It is intended that the Branch shall be in working order in the course of the coming summer. The whole question of traffic rates for transportation of the oil will then undergo thorough examination, and every encouragement be given for the development of the trade consistent with a fair return for the investment of the company.—*Toronto Globe.*

Revival of Business at St. Louis.

The St. Louis *Republican* says it sees all around it "evidence of better times. The cloud of rebellion is passing away, and people begin to look cheerfully upon each other. There is less of bitterness than has prevailed for a year past. It may be because all sides have become satisfied that injustice has been done to each other, and that it is time to heal the breaches thus made in social life. Peace is about to be restored to Missouri—the Mississippi will soon be open to the Gulf—the farmer, if he has not already sold, will soon be able to realize on everything he has—from ten to twenty millions of Treasury notes will soon be dispensed amongst us, and will fill the circulation. Let us be jubilant. *Better times are coming.*"

The Currency Question.

The additional $100,000,000 of United States Treasury Notes, to serve as money and to be legal tender in the discharge of all contracts, are now nearly prepared, and will come into circulation in a few days. A measure so novel, and unprecedented in modern times, cannot be regarded otherwise than with great interest, both from its influence upon commerce and trade, and from its bearing upon the received theories and doctrines in reference to the all important question of currency.

It would be almost superfluous at this late day to enlarge upon the reasons that led to the adoption of gold and silver as currency. The law in this, as in all other cases, corresponds with the phenomena, or fact. Gold and silver have an attraction for the race stronger than any other kind of property. A person possessing them can supply any want, and purchase complete personal immunity among every civilized or barbarous people. All place a similar value upon them. Not so of any other kind of property. What is valuable as food and clothing in one country may be valueless in another. This universal preference for gold and silver lies at the foundation of their adoption as currency. Their high relative value and divisibility without reducing their value are further qualifications to serve as currency, but not the principal one.

The use of the precious metals as money being to effect exchanges of property, it is plain that a saving is made whenever an exchange can be effected without their intervention. On a large scale, and in commercial transactions between nations, exchanges are effected by off-setting the title deeds to property, which are bills of exchange, one against the other. It is only to meet the balance remaining against one of the parties, that the precious metals are called into use—and them as merchandise rather than currency. Exchanges between persons composing the same community are effected in a similar manner;

the mode in which settlements are made between the banks of this city being a case sufficiently in point.

Such has been the progress made in the science of exchange of commodities, that gold and silver are now seldom used on a large scale. Property passes by transfers of the evidences of title. When a person gets a loan at bank he does not, as a rule, carry away with him gold and silver, which his contracts entitle him to do, but the promises of the bank to pay gold or silver to bearer. Whatever the capital of the bank consists of, the voucher he receives constitutes him the owner of a corresponding portion of its capital. It may consist of gold and silver or the promises of its debtors to pay gold and silver, which they have in effect borrowed. The bills of the bank, consequently, are treated as the money they represent; and in common parlance, are money; but they would not be money if issued by a bank possessing no capital, consequently nothing can possess the attribute of money but gold and silver, or title deeds to merchandise, and convertible at all times into gold and silver. Such title deeds, which consist of the bills of, or checks on banks, serve the same office in effecting exchanges as gold and silver, which hardly interposes in the ordinary transaction of business, except in the payment of balances.

Any attempt to substitute a currency in the place of one of gold and silver, or of title deeds of the same, or of merchandise, must prove a disastrous failure for two reasons: it is not convertible into the universal currency founded in nature; and as it does not represent an equal value in merchandise, its transfer from hand to hand passes nothing but a promise, the value of which may be entirely contingent. The promise must be sold before its value can be realized. It is not money; nor can it perform the office of money, which is to effect exchanges—the thing being wanting which it affects to represent. And here arises the great evil of a currency not based upon the precious metals, or upon merchandise. The issues of a bank without a penny of capital may be treated as capital till the fact of its insolvency is known, and become the foundation of important business transactions, which must fail with that of the promises upon which they were founded. The evils that flow from banking are precisely of this character—their promises are treated as capital when they may be worth no more than the paper they are written on.

We do not distrust the promises of government; on the other hand we have constantly labored to demonstrate their value. We have only to refer to experience in proof. But these promises are not title deeds to property or merchandise equal to their nominal amount. Their transfer from hand to hand does not, like transfers of bills of exchange, pass gold and silver, or property in form fitted for consumption. They cannot, consequently, possess the attributes of money. If these are treated as capital and made the basis of business or industrial operations, these must in the end fall from the unsubstantial foundation on which they rest. The capitals of banks are actual accumulations, which so far as they go may support the labor and furnish the material necessary for the construction of a railroad. But suppose such an enterprise be undertaken, based entirely upon promises to pay which do not represent a corresponding amount of property fitted to sustain labor, it is plain that such enterprise may fail entirely; or that the promises upon which it is based, will sink in value, just in ratio to the excess of their issue over the means for their instant redemption.

Such must be a result of the issue of Treasury Notes to pass as money, though the degree of their depreciation, and consequent harm may be slight. The country is rich and strong, and a mistake or blunder reaching only $150,000,000 may be readily borne. Still, the law cannot be violated without a corresponding penalty. The inevitable tendency of Treasury Notes will be to fall in value compared with the true standards—gold and silver. The decline may be gradual, but none the less certain. The mere increase in amount of money thrown into circulation, will have the effect to raise the market value of all other kinds of property. When this money is no addition to the capital of the country, such increase in price is only another name for a depreciation in the value of the paper currency compared with that of gold and silver.

Such has been the universal experience upon the subject. It was strikingly illustrated during the suspension of specie payments by the Bank of England. The bills of the Bank came much nearer being money than Treasury Notes. They were based upon commercial paper discounted, upon gold and silver, and upon deposits of Government securities. They were the symbols of existing values—not mere promises to pay. Yet they were at a discount varying all the way from 10 to 42 per cent. discount. The following statement taken from the report of the Committee appointed in reference to the resumption of specie payments shows the price of corn for a series of years, when paid for in gold or in bank notes.

Years.	Price of a quarter of Wheat when paid for in bank notes. s. d.	Do. when paid in gold. s. d.
1809	95 00	81 00
1810	106 00	88 06
1811	94 00	74 00
1812	115 00	90 00
1813	111 00	74 00
1814	74 00	56 06

We shall in this country soon began to witness a similar result. It is the inevitable consequence of two standards of value—one measurably permanent, dependent upon cost of production; the other corresponding in amount to the wants of the party issuing it, and its market value depending upon public opinion, and consequently constantly varying. The addition of $150,000,000 to the currency of the country will stimulate trade. Importations will increase, to be paid for in gold and silver. Interest on government securities must be also paid in coin. This will create an active demand which must tend to put up the price of the latter. But if there were no such demand, still there would be a difference between the value of the new currency, and gold and silver, just in ratio to the difference in actual values of which cost of production is an important element. It is a law, the effect of which cannot be avoided, and may soon, in this country, show as wide a difference between the value of the two currencies as ever existed in England.—*Hallett's Circular.*

Personal Liability of Stockholders.

DISTINCTION BETWEEN STOCKHOLDERS AND STOCK-OWNERS. A PERSON SUBSCRIBING IN ANOTER PERSON'S NAME, BUT PAYING FOR THE STOCK AND RECEIVING THE CERTIFICATE IS LIABLE TO CREDITORS OF THE COMPANY.

In the case of Burr *vs.* Wilcox, the defendant held a certificate of ten shares of the stock of the Hudson River Stone Dressing Company; and the plaintiff sought to make him liable to the amount of these shares upon a judgment recovered against the company, upon the ground that the whole amount of the capital stock was never paid in, nor was any certificate of such payment made, signed, sworn to, or recorded as required by the statutes of the State of New York; this statute making the stockholders personally liable in such cases. The defence was that the defendant was never a stockholder of the company in such a case as to be individually liable to the creditors of the company within the meaning of the statute.

It appeared that one Samuel H. Jordan subscribed for ten shares of the capital stock of the company in his own name; but such subscription was made at the request of the defendant in the name of the said Jordan, but for the defendant, to whom the certificate was issued—the name of the defendant not appearing on the subscription book.

The stock of the company was all taken up by subscription in April, 1853, the subscribers obligating themselves to pay for the stock in ten monthly instalments of ten per cent., commencing May 1st, 1853. On the 15th April, 1853, the whole stock having been subscribed for, the trustees apportioned the stock according to the several subscriptions, and ten shares was apportioned to Jordan for the defendant—which facts appeared on the records of the company. The defendant paid for his stock in monthly instalments of ten per cent., paying his first instalment May 3d, 1853. The company kept a book for the purpose of entering alphabetically the names of stockholders and the defendants name appears on a page under letter "W" in said book thus: "*Feb. 6th*, 1854, *E. C. Wilcox, ten shares.*" There was no transfer of stock to the defendant in the transfer books of the company, nor had any stock ever been transferred to him. A by-law, adopted at the organization of the company was to the effect that the stock of the company was transferable only on the transfer book of the corporation by the holder thereof or his attorney on the surrender of his certificate. The defendant was not one of the signers of the certificate for the formation of the corporation, nor had any claims to, or right to, or interest in, any stock thereof, other than what the certificate dated February 6th, 1854, indicated.

The action was brought in the Superior Court of the City of New York, and came before the court on questions of law arising at the trial, and there directed to be heard at the General Term, in the first instance. The jury by the direction of the judge found a verdict for the plaintiff for $1,071, the judgment being in the mean time suspended.

It was contended in behalf of the plaintiff on appeal that the fact that the defendant subscribed for the stock in the name of Jordan did not effect his liability; that having personally paid up all the instalments, and taken the certificate in his own name, he could not be suffered to evade the

claims of creditors by setting up that he originally subscribed for the stock under an *alias*. On the other hand it was maintained, in behalf of the defendant, that the decisions of the courts interpreting the statute under which it was sought to make him liable re-organized and established a distinction between stockholders and stockowners, in respect to the rights of creditors to sue individual members in actions at law; the former being responsible and the latter not. A stockholder being one in whom the legal title to that stock is vested: and a stockowner being one who has some equitable right to acquire the legal title from the company or third persons.

The General Term decided the case in favor of the plaintiff, on the ground that the defendant was liable as a stockholder. The case was then carried to the New York Court of Appeals; and the judgment of the Superior Court was affirmed. The following opinion was rendered at the decision of the case by the Court of Appeals.

CLERKE, J.—The counsel for the defendant contends that, as the stock was subscribed for in the name of Jordan, although really for the defendant Wilcox, the latter was not a stockholder within the meaning of the statute; and he says that the spirit of the doctrine upheld in the authorities to which he refers is, that only those having the legal title are stockholders, and that the court can only look to the legal title in determining who are liable under the 10th section of the statute.

Supposing for a moment, that the counsel is correct in this position, can it be truly said that Wilcox was merely an equitable owner of this stock? Jordan subscribed for this stock for Wilcox, as one of the original subscribers, at Wilcox's request; on the 15th of April, 1853, it was apportioned to Jordan for Wilcox, as appears on the records of the company. Wilcox himself paid for the stock in monthly instalments, the company receiving it from him as principal; and when all his instalments were paid, he received, on the 6th of February, 1854, his certificate of stock. Under these circumstances, he was I think, a legal, and not merely an equitable owner of the stock. Jordan acted merely as his agent; the relation between him and Wilcox was not of a trustee and *cestui que trust*, but that of principal and agent; which, although, in a certain sense and for certain purposes, involving the idea of a trust, does not make the principal the equitable, and the agent the legal owner of everything he buys for the former in his own name; particularly when he discloses the name of his principal. If it is known to the seller that the agent acts on behalf of another, and that other is recognized by the seller as the real owner, the principal is at once entitled to the possession of the thing purchased. So, in this case, the certificate of stock was issued to Wilcox in his own name: and although the name of Jordan was originally employed, the certificate of stock, in view of the whole circumstances, related back to make Wilcox the legal owner from the commencement of the transaction. He was entitled to demand a share of the profits from that time, if any profits accrued: he then became a stockholder and continued to be a stockholder at the time this action was commenced. The appellants counsel seems to insist that a transfer of stock in a transfer book is necessary to constitute a person a stockholder. After the original issue of stock, perhaps, any subsequent holders, in order to be made liable, should have the stock transfered to them on the books, or their names as stockholders should appear in the index book, or in the register of stockholders. But in the present case, Wilcox was an original subscriber through his agent Jordan; and of course, no transfer, as from an old to a new subscriber was requisite. The stock was issued, not transferred to him. The minor objections taken by the defendants counsel are equally untenable.

The judgment of the Superior Court of New York should be affirmed.

Opening of the Illinois Canal.

The Illinois and Michigan Canal was to be opened to Joliet on the 24th inst., for vessels drawing four feet six inches, and on the 1st of April it will be opened for the whole distance to La Salle.

ENGINEERING WORKS.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft.	Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.			14.	"	20	" 1½ to 1
3.	Base	12 ft.	Slopes 1½ to 1	15.	"	24	" ½ to 1
4.	"	14	" 1½ to 1	16.	"	24	" 1½ to 1
5.	"	15	" ½ to 1	17.	"	25	" 1½ to 1
6.	"	15	" 1 to 1	18.	"	26	" 1½ to 1
7.	"	15	" 1½ to 1	19.	"	28	" ½ to 1
8.	"	16	" ½ to 1	20.	"	30	" 1 to 1
9	"	16	" 1 to 1	21.	"	30	" 1½ to 1
10.	"	18	" ½ to 1	22.	"	30	" 1½ to 1
11.	"	18	" ¾ to 1	23.	"	32	" 1 to 1
12.	"	18	" 1 to 1	24.	"	32	" 1½ to 1

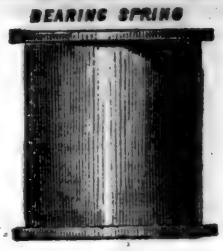
The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.



It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

CONTRACTS for **RAILS**, at a fixed price or on commission, delivered at an English port, or at a port in the United States, will be made by the undersigned.

THEODORE DEHON,
10 Wall st., near Broadway, N. Y.

500 tons T Rails on hand, 54 to 57 lbs. per lineal yard.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete and Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Total	$553,892 25
Total amount of surplus fund	$161,620 67

During the year the road has declared three dividends, as follows: January, 1861, 5 per cent. cash, and 4 per cent. scrip. July, 5 per cent. cash, on a capital of $3,000,000.

Dubuque and Sioux City Railroad.

The Dubuque and Sioux City Railroad Company are the successors of the Dubuque and Pacific Railroad Company. In August, 1860, the road was sold under process of foreclosure of a mortgage, and a new company organized, to which the road, equipments and lands were conveyed. The first election for directors of the new company took place in February following. By the articles of agreement, the new company succeed to all property, rights and franchises possessed by the old. The share capital authorized is $6,000,000, in shares of $100 each of which not more than $2,000,000 shall be preferred shares, being the amount of the mortgage and the interest thereon, for the non-payment of which the road was sold. By this decree it was provided that the holders of preference stock shall be entitled to receive as dividends on their shares the net earnings of the road, but whenever these should afford a larger dividend than seven per cent. per annum, *the excess* should be equally divided between the preferred and the common (old) stock.

The report of the new company, for the year ending December 31, 1861, shows that the road has earned largely, considering the limited machinery and rolling stock owned by them. No accident of the most trivial nature occurred during the past year. The managers have settled up the entire back payments, which amounted to over $12,000; also a large amount due upon old vouchers, besides diminishing the floating debt over $12,000. By order of the Board of Directors a circular was recently issued, asking the consent of the preferred shareholders to mortgage the first hundred miles of road, the bonds to be used only at par in the payment of floating debt; but few responses has been received at date of the report. The following is a copy of the last

GENERAL BALANCE SHEET.

	Dr.
D. & P. R. R. Co. obligations	$2,539,343 08
Construction	239,618 63
Engineering	3,588 75
Right of way	6,749 55
Equipment	47,553 32
Bills receivable	5,059 53
Company expenses	5,347 47

Cash in bank	832 72
	$2,870,014 77
	Cr.
Capital stock	$2,469,776 60
Bills payable	219,249 53
Judgment liens	11,465 64
Lands	12,927 37
Edward Stimson, "Trustee"	43,500 00
Dividend fund	113,095 53
	$2,870,014 77

The capital stock consists of the following classes:

Preferred shares	$1,479,700 00
Common "	979,900 00
Fractional preferred	4,208 66
" common	5,972 94
Total	$2,469,776 60

The receipts and expenditures for 1861 were as follows:

Freight earnings		$152,180 68
Passenger "		42,985 24
Mails		4,294 19
Rents		749 94
		$200,160 05
EXPENDITURES:—		
Expenses of operation	$99,731 07	
Interest and discount applicable to same	7,999 89	
Portion of Company expenses, salaries, etc.	10,000 00	
Taxes paid	650 48	
		118,381 44
Amount net earnings for year 1861, to credit of dividend fund		$81,778 61
Add amount to credit of dividend fund of last annual report		31,316 92
Am't as shown in Gen. Balance Sheet.		$113,095 53

The liabilities discharged under the decree of foreclosure amounted to $2,539,343, comprising $1,136,000 land grant construction bonds of $1,000 each, $4,400 of the same description of bonds in $50 each, $149,308 of interest, $839,800 of capital stock, and various smaller sums of floating indebtedness. On the 1st of January last there were sold and outstanding construction bonds of the Dubuque and Pacific Railroad Co. and interest on them to the amount of $297,426, besides $105,180 bonds and coupons pledged and outstanding, making a total of $402,606.

The lands granted by Congress to aid in building the road were 1,226,163 acres of which 349,376 were sold by the Dubuque and Pacific Company or by the trustees, leaving a balance of 876,786 in the hands of the present company. Of this quantity they have sold 7,382 acres and pledged 76,981, leaving undisposed of 792,423 acres. The lands have been parted with at prices between two and three dollars per acre.

From the Superintendent's report we learn that the general condition of the road has been decidedly improved during the year by a more thorough system of drainage and track repairs; and the track may now be considered as being in a fair condition. A trestle work of 1,500 feet near Dubuque has been nearly all filled in, at a cost of $4,000. About one hundred tons of rails are still needed to put the track in proper condition. The western part of the road is so straight and level that it can be kept in repair at a minimum of expense. To the working expenses should be added about $5,000 for depreciation of rails. The number of miles run during the year was 107,646, showing average earnings of $1.85 per mile, against 93 cents per mile for expenses of operating. The annexed statement shows the yearly earnings of the road since it was opened:

Year.	Earnings.	Increase.
1858	$62,519 68	
1859	58,620 19	
1860	121,025 95	$62,405 76
1861	199,410 11	78,384 16

The earnings of 1862 are estimated at not less than $260,000, yielding one-half as net proceeds. It is recommended to erect four wood sheds at the principal stations to prevent the longer use of fuel when green. Additional accommodations for storing wheat, flour and cattle are needed at Dubuque. The water stations are fed by means of wind-mills, thus saving a considerable sum as wages.

The present stock of the company consists of four first-class locomotives, two second class and one switching engine; 65 box cars, 35 flat cars, 2 baggage cars and 7 passenger cars—all in good order, excepting two of the engines. The want of sufficient motive power is badly felt, also a new engine house at Dubuque, the present one being far too small.

The facilities at Dunleith, on the Illinois Central, for loading and unloading freight are about to be increased; and arrangements are being perfected so that through freight trains can be run from that place to Chicago, enabling freight to go from Cedar Falls to Chicago in thirty-six hours. This will be a valuable advantage to Northern Iowa. The passengers and freight of the Dubuque, Marion and Western Railroad are carried over 22 miles of the Dubuque and Sioux City railroad between Farley and Dubuque. The revenue derived from that source during the past year has been $11,144 91.

The report also alludes to the ballasting, fencing and planting of trees along the line. Arrangements, it is stated, are nearly completed with the Illinois and Mississippi Telegraph Company for putting up a telegraph from Dubuque to Cedar Falls. The road is 100 miles in length.

The present officers are:—

President—Edward Stimson.
Treasurer—C. H. Booth.
Secretary—James McKinlay.
Superintendent—George Young.

Northern Central Railway.

The revenue of this company for the fiscal year ending December 31, 1861, was as follows:

	Wrightsville, Y. & G. R. R.	Northern Central.
Freight	$18,387 59	$682,062 98
Passengers	9,402 74	280,859 24
Mail	650 00	25,450 00
Express		24,885 92
U. S. service		336,835 49
State "		24,039 34
Sundries		20,903 76
Total Northern Central Railway		$1,394,536 78
Wrightsville, York and Gettysburg.		28,440 33
Total revenue		$1,417,977 06
The expenses were:		
Transportation expens.	$306,023 00	
Repairs of machinery	149,295 52	
" railway	179,117 09	
General expenses	47,396 59	
		681,832 20

Interest on bonds of do.	3,120 00	
Interest on stock of do.	1,919 75	
Instalments due sinking fund loan No. 1, from Oct. 1, 1855, to Oct. 1, 1861	69,723 18	
Instalments due sinking fund loan, No. 7, from Dec. 20, 1856, to Dec. 20, 1861, less partial payments	97,410 69	
Depreciation in value of rolling stock from consolidation Dec. 9, 1854, to Dec. 31, 1861	189,879 21	
Discount on sale of Company's bonds	51,172 99	
Interest account	25,488 43	
Exchange and sundry accounts	1,138 16	
		756,723 31
Balance		$24,278 23
" December 31, 1860		347,901 28
Total balance		$372,179 51
Compared with the previous year, the gross earnings show an increase of		$399,874 85
With a decrease in expenses of		52,643 34
Making the increase in net earnings		$452,517 69

The expenses of transportation department have been increased $14,621 82; and the general expenses, $12,136 79. The expenses of the road department have decreased $60,414 06; and of the machinery department, $18,887 89.

The working expenses have been 48.08 per cent. In 1860, they were 72.14—showing a reduction of 24.06 per cent.

The gross earnings on the Northern Central *proper*, exceed those of 1860 44.5 per cent., while the expenditures have decreased 5.8 per cent.

The large amount of expenditures made upon the road in 1860, have enabled the management to show these favorable results of the working of the property in 1861.

The total number of passengers carried during the year, (exclusive of U. S. soldiers,) has been 298,633. The average amount paid by each was 93.84 cents. The total number of tons of freight amounted to 489,155—of which the local business of the Northern Central furnished 300,148 tons, and the Wrightsville branch 30,431; the amount of tonnage received from all connecting roads was 158,576.

The number of locomotives owned by the company is 41; of which 39 only are fit for service. Seven more had been contracted for, the delivery of which was to have commenced about the 1st of February. The number of miles run by engines during the year has been 744,961, at a cost of 8.63 cts. per mile. The average mileage of passenger engines has been 28,421; and of freight engines, 12,792.

The company have purchased 25 stock cars, and built 5 in their own shops. The rolling stock now consists of 30 passenger, 8 baggage, 1 paymaster's, 1 express, 656 freight and 744 coal cars, valued at $338,010. The value of the 41 locomotives is estimated at $328,000.

The gross revenue of the W., Y. & G. M. was $23,440 33, and the expenses of operating and repairing the road $15,335 82—leaving net revenue $8,104 51. Dividend of $1 per share, and interest on bonds and debt of $11,380 75—deficiency $3,276 24.

It will scarcely be forgotten, that at the commencement of the fiscal year, 1859, the portion of the road below Bridgeport was worn out and the part between Bridgeport and Sunbury had never been completed; and further, there was a great deficiency of rolling stock—there being neither a sufficient number of passenger cars, freight cars or locomotives; and many of those that were upon the road were greatly out of repair.

The finances of the Company, too, were in a deplorable condition. Since that time the affairs of the Company have been steadily improving.

At the commencement of the fiscal year, 1859, the indebtedness of the Company was as follows:

Funded debt	$4,545,800 00
Other liabilities, commonly called floating debt	617,507 10
Total	$5,163,307 10
From which deduct cash in banks, bills receivable, value of materials on hand, investments, at their market value, in Wrightsville, York and Gettysburg R. R. stocks, and of Northern Central Railway bonds on hand, and also $62,555, the redemption value of the Sinking Fund	448,816 20
Leaving the net liabilities	$4,714,490 90

The indebtedness of the Company at the commencement of the fiscal year 1860, was as follows:

Funded debt	$4,728,800 00	
Floating debt	756,641 38	
Total	$5,485,441 38	
From which deduct cash in banks, bills receivable, value of materials on hand, investments, at their market value, in Wrightsville, York and Gettysburg Railroad stocks and bonds, Lackawanna and Bloomsburg 7 per cent. bonds, and Northern Central Railway bonds on hand, and also redemption value of Sinking Fund, $62,-555 00	508,158 87	
Leaving the net liabilities	$4,977,282 51	

The indebtedness of the Company at the commencement of the fiscal year 1861, was as follows:

Funded Debt	$5,040,300 00	
Floating Debt	543,650 07	
Total	$5,583,950 07	
From which deduct cash in banks, bills receivable, value of materials on hand, investments, at their market value, in Wrightsville, York and Gettysburg Railroad stocks and bonds, Lackawanna and Bloomsburg seven per cent. bonds, and Northern Central Railway bonds on hand, and also $62,-555 00, the redemption value of the Sinking Fund	419,080 41	
Leaving the net liabilities	$5,164,869 66	

The indebtedness of the Company at the commencement of the fiscal year 1862, was as follows:

Funded Debt	$5,150,000 00	
Floating Debt	500,088 39	
Total	$5,659,088 80	
From which deduct cash in banks, bills receivable, value of materials on hand, investments, at their market value, in Wrightsville, York and Gettysburg Railroad stocks and bonds, Lackawanna and Bloomsburg seven per cent. bonds, and Northern Central Railway bonds on hand, and also $86,-157 50, the redemption value of the Sinking Fund	858,169 99	
And it leaves the net liabilities	$4,800,918 40	

The amount due the sinking fund, as will be hereinafter represented is not included in the above statement of floating debt.

To the task of improving the general condition of the road and remedying the deficiences, the Board in 1859 turned their attention, and that policy has been continued to the present time. Accordingly large sums were expended, not properly chargeable to the road department for ordinary repairs of the road, or to the machinery department for ordinary repairs of cars and engines, or to ordinary expenses of transportation; but as stated in a former report, to the cost of construction of the road, to the rolling stock account and to a special account of extraordinary repairs, rendered necessary by the dilapidated condition into which the road had fallen, and which should have been distributed over former years. During that year the following sums were expended not properly chargeable to the ordinary expenses of operating the road and keeping it in repair, viz:

Under the head of Construction, were charged—for work done	$8,680 98	
Ballasting	28,000 00	
Engine and Station Houses	13,243 53	
Engineering	2,496 84	
Discount on Sale of Bonds	63,613 75	
Interest on Construction Loans	80,445 49	
Making	$146,480 00	
For Right of Way and Real Estate, there was charged	32,692 36	
On acc't of Rolling Stock for 4 Locomotives	$34,750 00	
65 House Cars	37,700 00	
95 Gondolas	43,427 37	
Passenger & Baggage Cars	5,402 00	
Making	$121,279 37	
From which deduct the amount allowed for old Locomotives, given in part payment, and for Lime Cars sold	4,870 00	
And it makes under this head	$116,409 37	
On account of building the Telegraph Line, there was expended	7,867 97	
And there was expended for rebuilding Bridges, renewing Cross-ties, for purchase of new iron, for re-rolling old rails, and for tools, spikes, &c	104,557 24	
Making a grand total of	$408,007 03	

Thus it will be seen by a comparison with what has been stated before, that notwithstanding this large expenditure beyond the sum necessary for ordinary expenses, the net liabilities were increased only $262,791 59.

During the year 1860, there were expended under the head of construction	$101 00	
For Discount on Bonds	147,048 11	
" Rolling Stock	5,546 00	
" Telegraph Line	725 00	
And the Superintendent reported in regard to the operations of the road for that year, that in order the road might be worked with economy and regularity, and dispatch given to the business offering, it became necessary to expend over and above a fair allowance for regularly working and maintaining the property in a condition to meet the requirements of the public, as well as the expectations of those interested in its success, the large sum of	145,500 00	
Making the grand total for the year	298,920 11	
The increase in the liabilities that year was	278,587 15	

During the year 1861, the following sums were expended, to wit:

For right of way	$8,817 26	
" engine house, &c	287 78	
And the Superintendent reports that the extraordinary outlay in the road department was	41,224 39	
Making a total of	$50,329 43	

The net liabilities this year were reduced below those of the preceding year $363,951 26.

The Board regret that the financial embarrassments of the company have, heretofore, not only prevented the prompt discharge of all the interest obligations, but also the annual investments to the sinking funds. These arrearages have consequently been accumulating year after year, until they amount, with compound interest, according to the balance sheet, to the sum of $167,133 87.

There are two sinking funds which the Company are required to maintain, viz:

1st. For the loan of $150,000, due October 1st, 1866;

2d. For the loan of $2,500,000, due July 1st, 1885.

The act of the State of Maryland authorising the issues of the first named loan, provides that there shall be an annual appropriation of $10,000 in cash, invested in securities, approved by the Treasurer of Maryland—such securities to be held by said Treasurer, in trust, until the maturity of the loan, when they shall be sold, and the proceeds applied to pay off the principal and interest of the bonds.

Four annual appropriations, with accrued interest, have, accordingly, been invested to October 1st, 1855, in the purchase and deposite, as aforesaid, of $20,000 North-western Virginia Rail Road first mortgage bonds, guaranteed by the city of Baltimore; and of $23,500 of Baltimore city six per cent. stocks of 1890, costing and representing value for redemption purposes to the amount of $43,555 00

To which the accrued interest being added 16,612 50

Makes the total value of investments $60,167 50

Six annual instalments to October 1st, 1861, with compound interest are therefore due, amounting to $69,723 18, which being invested at par, would augment this sinking fund to $129,890 68, a sum sufficient with its accruing interest, to liquidate the loan during the year 1864—more than two years before its maturity. In view therefore of this fact, it will be for the Board to consider, if practicable, whether it will not be the interest the Company, to invest a sum sufficient, but not more than will provide for the redemption of the loan at maturity, for by appropriating $10,000 for the year ending October 1st, 1861, and annually thereafter, the same amount, until and including October 1866, this will be fully attained.

The mortgage which secures the loan of $2,500,-000 provides that one per cent. of the amount of loan outstanding on December 20th of each year, commencing with December 20th, 1857, shall be annually paid in cash to the trustees of the mortgage, to be invested by them in the bonds of this loan, whenever they can be bought at, or less than par; otherwise to be invested in other stocks; the securities thus purchased to be held by them as a sinking fund for the ultimate absoption and payment of said bonds and interest, and to be applied by them at maturity of said bonds to the payment thereof and interest thereon: the surplus, if any, to be paid to the Northern Central Railway Company.

Nineteen thousand dollars of the Company's bonds, having a market value of $11,020 00, have been delivered to the trustees, who have from time to time invested the accrued interest to July 1st, 1860, until the whole value of the fund carrying interest from that date was $25,500, and cash on hand, (including $152 50 expended for legal expenses, not yet credited on the books of the Company,) $490 00.

After crediting the above amount it will be found that, according to the balance sheet of the Treasurer, there are instalments, with compound interest, due to December 20th, 1861, amounting to $97,410 69.

This amount the Board feel confident can be paid during the present year 1862, as well as $10,-000, or the whole sum, if found to be expedient, due on sinking fund for loan of $150,000 00.

The Board, anxious that every precaution should be adopted to secure the safety of the funds entrusted to the Trustees, desire that each bond (of the Company,) and coupon, shall be stamped with a suitable device, representing that such bonds and coupons are set apart for the sinking fund, and in no case are to be diverted therefrom.

It requires to pay the interest on the funded debt, including the annuity to the State of Maryland	$309,000 00
To pay up the arrears to the Sinking Funds	167,133 87
To pay annual investment this year (1862) to Sinking Fund	35.000 00
Total	$511,133 87
And in order that none of the investments before mentioned need be sold to pay off the floating debt remaining last year, there may be added, (due allowance being made for contingencies and losses on the bills receivable) the sum of	$50,000 00
Making in all	$561,133 87

The net revenue of 1861, as has been stated above, was $736,144 86. Should the net revenue, therefore, for the year 1862 equal that of 1861, and there is every reason to believe it will, there will remain, after paying all proper demands upon the treasury, the sum of $175,011.

The Board believe it to be the true policy of the Company to finisht he road and put it in complete order, to fully equip it with rolling stock, and erect suitable buildings for the protection of its engines and machinery; and that after the present year the Company may commence paying dividends and maintain them regularly thereafter.

The damage sustained by the destruction of the bridges in April last is estimated at $117,609 63.

The quantity of coal transported over the road during the year amounted to 151,741 tons, viz: from the Lackawanna and Bloomsburg Railroad, 22,667; from the Shamokin road at Sunbury, 4,232; from the Trevorton Mines, 28,382; from the Lyken's Valley region, 55,059; from Pine Grove, 1,350; and from Wrightsville, 2,000 tons—a decrease as compared with the previous year of 88,076 tons.

Internal Commerce of the United States.

A Paper Read before the American Geographical and Statistical Society, by HENRY V. POOR, ESQ., *a Member of the Society.*

It is characteristic of this country that its commerce and wealth, and, consequently, its population are creations rather than growths. These could never have existed, unless the conditions on which they are based had been supplied by man. The natural routes of commerce, the great rivers of the Continent, had their outlets in inhospitable climes, and far distant from the central portion of the Atlantic slope, which was better fitted than any other portion of the Continent for commercial nad manufacturing enterprise, and as the seat of a dense population, and at the same time most conveniently placed in reference to the Old World. The proposition set before our people, consequently, was to correct this oversight of nature; to recast a Continent, and adapt it to their convenience and wants. Nature had taken good care, however, that the task should not be too ardous to discourage the attempt, by the slight elevation she gave to the interior of the Continent, and in the gentle and uniform slopes of its great plains. In its centre were the great lakes, so nicely poised as to give almost equal choice of outlet, either into the Gulf of Mexico, Hudson's Bay, or the Gulf of St. Lawrence. A low ridge, of eight feet in elevation, is the only barrier between them and the Mississippi, which was undoubtedly at one time their outlet. The waters of the two mingled in times of flood, allowing the barks of the natives to pass from one to the other. On the North, a similar means of communication exists between the lakes and Hudson's Bay, although the dividing ridge is somewhat higher. The great depression in the Continent, however, in ascending from the Gulf, is to be found in the Valley of the Mississippi and the Red River of the North, whose waters also mingle, so that, at certain periods of the year, boats pass from one to the other. But neither the inhospitable shores of Hudson's Bay, or the Gulf of St. Lawrence, or the insalubrious Delta of the Mississippi, were adapted to become the seats of a people excelling alike in agriculture, commerce, and the mechanic arts, which require for their development the temperate and bracing climates of the Middle and Northern States, beneath whose soil Providence has accumulated in the greatest profusion the two prime agencies in modern civilization—iron and coal.

In the absence of navigable water-courses the people on the Atlantic slope were without any means of opening communication with the interior at all adequate to the wants of an extensive commerce. The quality in the soil that gave it fertility, rendered it entirely unfit for good earth-roads. The report made to the Legislature of this State in 1817, which laid the foundation for the construction of the Erie Canal, stated that the cost of transporting a ton of produce from Buffalo to Albany was $100, and the time required twenty days. At that time the produce of Western New York was either floated down the Susquehanna or Delaware Rivers to Baltimore or Philadelphia, or the St. Lawrence to Montreal and Quebec. The area of the trade of the City of New York, which, by virtue of its public works, now lays the whole country under tribute, did not extend in any direction twenty miles from the tributaries of the Hudson. All beyond is an acquisition of her enterprise and skill, which have annexed territories far exceeding those ever annexed by the sword, and hold them by a tenure ten times as firm—that of mutual interest and dependence.

The first well-matured plan for an improved line of communication between the Atlantic slope and the Great Valley, was the proposition for a canal upon the route of the Potomac and Monongahela rivers, by the Father of this country—Gen. WASHINGTON. This project was a subject uppermost in his mind in his first journey across the mountains. Upon his entrance into the House of Burgesses of Virginia, he called its special attention to the subject, and proposed a series of surveys of the route. It was not long, however, before it was ascertained that a much better route existed in the valley of the James and Kanawha rivers. The improvement of the first named river, with a view of ultimately carrying a water-line across the mountains, was commenced in the last century. But Virginia long since tired of the work. Even WASHINGTON himself lived to see that his own State was not to reap the glory or advantage of first opening through her own territory the great highway which was to be freighted with a commerce vastly richer than that even fabled of Ormus or of Ind. In after years, when he stood upon the summit of that vast plain from which the waters flow by gentle descent into the Lake Ontario and the Huron, and over which, through the Erie Canal, the waters of the St. Lawrence turned into the Atlantic, he saw that the march of empire was not to be through his beloved Virginia, but through distant lands, as a reward, seemingly by Providence for principles that make manly industry the honor as well as the welfare of every people.

It is this great depression in the continent through which the Erie Canal has been constructed, which is the great fact in the progress of this country in population and wealth, and in whatever really distinguishes it. It established the supremacy of the North upon the permanent basis of natural law. But for this depression, the Western States would have been unpeopled, and the greater proportion of their area still a desert. From the advantages taken of it, produce is grown, with profit to the farmer, upon the Upper Mississippi, two thousand miles from our harbor, and five thousand miles from the districts of consumption in Europe, the transportation of which, for three hundred miles, over ordinary roads, would fully equal its value. The cost in 1860, for transporting a ton of produce from Buffalo to Albany, including tolls was only $2 87, and from Chicago to Albany only about twice this sum. The greater part of the vegetable food we consume is grown in districts so far distant, that the cost of transporting a bushel of wheat from them to us, over ordinary earth-roads, would be three times greater than its present value in our market, and more than six times greater than the value of Indian corn. This statement is a striking illustration of what the country owes to its public works.

The success of the Erie Canal, connecting the great lakes with tide-water, immediately led to the commencement of a large number of similar works extending from thence to the Mississippi River and its tributaries. Of these seven have been completed and are in operation—the Erie Canal, extending from Erie, Penn., to Pittsburgh; the Sandy and Beaver Canal, connecting a tributray of the upper Ohio with Cleveland; the Ohio Canal, extending from Cleveland to Portsmouth on the Ohio River; the Miami Canal, extending from Toledo to Cincinnati; the Wabash and Erie Canal, extending from Toledo to Evansville on the Ohio; the Illinois and Michigan Canal, extending from Chicago and the head of navigation on the Illinois River, and the Canal connecting the Fox and Wisconsin Rivers.

The greater number of these works were commenced and either fully or partially completed before the railroad, that great wonder of modern civilization, had developed its vast capacity and usefulness. With the exception of the Erie, and perhaps we may say the Illinois and Michigan Canal, all the others named have been nearly superseded by railroads, which, in all the Northern States, have come to be the common highways. Two great lines of railway have been constructed between our own harbors and the Lakes Erie and Ontario, with branches to every available port upon them, and serving as trunk lines for the vast system that radiates from the lakes and striking the Ohio and Mississippi at numerous points, have partially turned these great rivers with their tributaries into our own harbor. There are thirteen great lines connecting the lakes with the Mississippi, and eight with the Ohio. All these are but prolongations of our own system, and are as much tributary to the commerce of our City

as if they radiated from it, and brings to us not only the commerce of the vast network of railroads, of which they form the trunk lines, but that of the 20,000 miles of navigable water line formed by the Mississippi and its tributaries.

The following statements show the extent of the lines of completed railroad in the United States on the 1st day of January last, and of the progress of the system for 30 years past:

States, &c.	Total length of line.	Miles in operation.	Cost of roads & equipment.
Maine	639.86	475.86	$16,238,261
N. Hampsh'e.	684.29	657.88	22,676,234
Vermont	555.37	575.37	23,240,097
Massachu't's	1,386.63	1,314.35	59,777,878
Rhode Island.	136.82	104.32	4,138,383
Connecticut	762.90	607.76	20,948,380
N. E. States	4,185.87	3,715.54	$147,014,233
New York	3,455.37	2,808.96	$145,259,792
New Jersey	844.76	627.28	30,395,031
Pennsylvania.	3,972.26	2,948.22	151,529,629
Delaware	170.69	136.69	4,370,766
Maryl. & D. C.	701.81	405.81	19,979,284
M. Atl. States.	9,144.89	6,921.96	$351,534,492
Virginia.	2,483.62	1,805.04	$69,580,696
N. Carolina	1,212.04	886.92	17,084,500
S. Carolina	1,074.47	978.47	22,045,435
Georgia	1,724.20	1,401.50	27,632,690
Florida.	736.50	326.50	6,561,000
S. Atl. States.	7,230.83	5,398.43	$142,904,321
Alabama.	1,438.90	643.40	$17,261,487
Mississippi	870.80	797.80	22,986,370
Louisiana	831.00	327.75	12 193,124
Texas	2,667.00	294.50	9,200,000
Gulf States	5,807.70	2,063.45	$61,640,981
Arkansas	701.33	38.56	$1,800,000
Missouri.	1,430.60	813.10	35,398,093
Tennessee.	1,412.63	1,283.54	30,793,180
Kentucky.	763.90	531.20	16,551,600
S. Int. States.	4,308.46	2,666.34	$84,542,873
Ohio	4,183.25	3,057.03	$117,353,116
Michigan	1,412.10	807.30	33,615,761
Indiana.	2,522.27	2,058.17	71,973,669

Wisconsin	2,272.09	937.09	37,580,881
Iowa	2,021.80	548.80	17,257,905
Minnesota	1,167.00	.....	2,000,000
N. Int. Stat.	17,080.41	10,332.99	$386,756,913
California.	343.23	70.05	$3,600,000
Total U. S.	48,100.89	31,168.76	$1,177,993,818

The following table exhibits the progress of railroads for the 30 years ending on the 1st of January, 1861:

Years.	Miles.	Years.	Miles.	Years.	Miles.
1832	131	1842	3,877	1852	10.873
1833	576	1843	4,174	1853	13,315
1834	762	1844	4,311	1854	15,511
1835	918	1855	4,522	1855	18,153
1836	1,102	1846	4,870	1856	21,440
1837	1,421	1847	5,336	1857	24,230
1838	1,483	1848	5,682	1858	26,210
1839	1,920	1849	6,350	1859	27,857
1840	2,197	1850	7,475	1860	29,401
1841	3,819	1851	8,856	1861	31,179

The following statement will show the length of Canals in the United States at the period named:

	Length in miles.	
Northeastern States.		
Maine	50.50	
New Hampshire.	2.13	
Vermont.	1.06	
Massachusetts	6.60	
Connecticut	5.50—	65.19
Middle Atlantic States.		
New York	1,039.86	
New Jersey	148.70	
Pennsylvania	1,349.00	
Delaware	13.50	
Maryland and Dist. of Columb.	191.00—	2,742.06
Southern Atlantic States.		
Virginia	188.98	
North Carolina	13.50	
South Carolina	52.50	
Georgia	28.00—	382.98
Gulf States.		
Louisiana	24.74—	24.75
Southern Interior States.		
Tennessee	51.70	
Kentucky	486.50—	538.20
Northern Interior States.		
Ohio	796.00	
Michigan.	543.00	
Indiana	102.00	
Illinois	20.00—	1,461.00
Total.		5,214.18
Add railroads		31,168.76
Total mileage of railroads and canals.		36,382.94

But what chiefly concerns us are the results of this vast system—the commerce and wealth it has created. It is here that conjecture becomes an element in our calculations. The Federal Government utterly ignores what is regarded a most important function with others—a knowledge of the extent and value of the internal commerce of the country. State Governments have been almost equally indifferent. It is to make up for such neglects that our Society was instituted. What individuals and institutions like our own do not accomplish, will be left undone. We have in this State, fortunately, some data with which we can commence, and which, with statements furnished by Railroad and Canal Companies, will enable us to estimate approximately the value of the tonnage of our public works. Upon the canals the tonnage is both classified and its value estimated as a basis for the imposition of tolls. This tonnage for 1860, with the valuation, was as follows:

CANALS.

	Tons transported.	Val. per ton.	Aggregate value.
Prod. of the forest	1,509,977	$7	$10,554,723
Prod. of animals.	19,882	253	5,030,061
Vegetable food	1,659,158	30	49,710,833
Other agricul. prod'ts.	3,714	29	1,098,072
Manufactures	268,759	30	8,413,177
Merchandise	250,360	337	84,250,425
Other articles	938,364	13	11,389,907
Total.	4,650,214	$37	$170,840,198

The Railroad Companies are required to classify a report of the amount of their tonnage, but not the value of the same. I give the classification and amount, with the estimates by myself.

RAILROADS.

Kinds of freight.	Tons carried.	Val. per ton.	Total value.
Prod. of the forest	373,424	$20	$7,468,480
Prod. of animals.	895,519	200	179,103,800
Vegetable food	1,103,640	50	55,183,000
Other agricul. prod.	143,219	15	2,148,055
Manufactures	511,916	250	127,979,000
Merchandise	783,811	500	391,905,500
Other articles	980,244	10	9,802,440
Totals	4,741,773	$163	$773,086,500
Add ton'ge of canals.	4,659,214	37	170,849,198
Totals.	9,391,987	$104	$943,935,698

The value of the tonnage carried on Railroads is from estimates of experienced forwarders. The correctness of these estimates is an important subject of inquiry as furnishing data applicable to the tonnage of all the public works of the United States.

The products of the forests, which embrace the more valuable kinds of lumber, are put at $20 per ton, which is about equivalent to a thousand feet, board measure. The products of animals are estimated at $200 per ton, or ten cents per pound. As butter and cheese make a considerabe portion of this class of tonnage, the estimate is not probably out of the way. It is lower than that of the products of animals carried by the canals. Vegetable food, which is chiefly flour, is estimated at $50 per ton, which is at the rate of $5 per barrel. The greatest difficulty in arriving at absolute correctness is in reference to manufactures and merchandise. The former is estimated at $250 per ton, while that transported by the canal is estimated at only $30 per ton. But the great proportion of manufactures carried by the former is *salt*, which is never transported on railroads. Another important item of manufactures transported on the canals is made up of pig and bar iron. The manufactures transported by railroad, on the other hand, are of entirely a different class of articles, being iron and wood wrought into various forms, fitting them for use, such as utensils and machinery, furniture, leather and domestic woolens and cottons. The term merchandise is applied to a higher grade of manufactures, and embraces all the more valuable kind of goods. The estimate for this class of tonnage is $500 per ton. A very large proportion of our imports come under this head. A merchant, with the system of classification adopted by the railroad companies, could probably give a very accurate estimate, and, perhaps, point out fallacies in my own.

I am aware that the results deduced from the calculations may seem almost incredible. I believe they are not exaggerated, and am sustained, I think, by reference to the railroads of Massachusetts. These transported in 1860, 4,094,369 tons. At the value estimated for the tonnage of the New York railroads, that of Massachusetts would equal $667,382,147. If we take off one-quarter of this tonnage as duplications being reported by more than one road, we shall reach 3,070,027 as the absolute tonnage of the railroads of the State, having a value of $500,524,201. The products of the State for the same year, entering into consumption, were fully up to $300,000,000. In 1855, according to an accurate census, they were probably $200,000,000. If we estimate the raw material used, almost the whole of which is imported, the aggregate value of the tonnage would be $450,000,000. The tonnage passing over the roads of the State, from other States, probably exceeded in value $50,000,000, making the aggregate of $500,000,000.

In estimationg the value of the tonnage of the railroads of New York, we must make certain deductions for duplications, though probably not so great a percentage as for the railroads of Massachusetts. Of the total tonnage of the former 2,107,737 tons were carried by the Erie and Central Railroads. The roads tributary to these are the Buffalo and State line, the Buffalo, New York and Erie, and the Watertown and Rome, the aggregate tonnage of which was 678,767 tons. If we deduct 25 per cent. for duplications from the total tonnage of the State there will be left 3,556,330 tons, having a valuation of $598,681,798. With the deductions the absolute tonnage of the railroads of the two States was $6,626,357, having an aggregate value of $1,080,205,991. Adding this tonnage and value to the freight transported by the public works of the two States will be 11,276,571 tons, having a total value of $1,250,055,179.

The total length of the railroads of the two States transporting freight was 3,886 miles, 1317 being in the former and 2,569 in the latter. The freight carried per mile of road was, consequently, 1,700 tons. There are in the United States 33,000 miles of railroad. If we assume a tonnage for the whole equal to one-half that for the railroads of New York and Massachusetts, or 850 tons per mile of road, the total tonnage will be 28,050,000 tons, having a value of $4,542,150,000.

If to these aggregates we add the tonnage of the Canals of the country, estimating the same and their value at twice those for the New York Canals, the aggregates for all the Canals will be 9,300,428 tons, having a value of $341,698,396. Adding these amounts to the Railroads of the country, the former will be swelled to 37,350,428 tons, having a value of $4,883,848,396. These aggregates, vast as they are, do not include the coastwise trade of the country, or that of its navigable lakes and rivers. There is no doubt that the tonnage is greatly under-estimated, whatever may be thought of its value. The average ton-

nage per mile of the railroads of the Eastern States, embracing coal roads, is fully 2,000 tons per mile of road. The tonnage of the Western roads will equal fully 1,000 tons per mile, as is proved by the following statement of the length and tonnage of several roads:

Road.	L'gth, Miles.	Tons Transported.
Cleveland, Columbus & Cincinnati	141	295,835
Little Miami	120	343,961
Cleveland and Toledo	147	250,483
Michigan Central	282	378,570
Michigan Southern	525	398,679
Illinois Central	700	496,390
Chicago, Burlington and Quincy	310	538,670
Chicago and Rock Island	228	301,668
Galena and Chicago	259	381,188
Total	2,712	3,386,393

Average per mile, 1,250 tons.

As conditions precedent to an accurate estimate of the value of the internal commerce of a country, we must first know the amount and value of the products, and the degree to which subdivision of labor is carried. But no adequate census of the country has been taken in view of ascertaining these facts. We have had only one thoroughly complete census—that of the State of Massachusetts, taken in 1855. The total value of all the products was $295,820,825. The rate of production was equal to $200 per head. One-half this rate for the whole country would equal $4,000,000,000. Assuming that one-half the values produced went into channels of commerce, the return values being equal to those outgoing in any direction, and we should have a result corresponding very nearly to that already given.

The next step, assuming the correctness of the calculations in reference to the commerce of the railroads and canals of the country, is to determine the value of the coastwise trade, and that of the natural water-courses—the lakes and rivers. But here we are thrown almost entirely upon conjecture. Take, for example, the value of the merchandise brought to, and carried from this city on the Sound boats, of which, in connection with railroads, there are three first class lines. The steamers of these arrive and depart daily, almost always heavily laden. We have not here the elements for making a calculation approximately correct. Such is the case with the whole coastwise trade. We are no better off in reference to the river trade. With regard to the lake-trade, a great many reports have been got up, but the calculations of many of them seem to be extravagant and fallacious. That of Mr. I. D. Andrews is the most complete work of the kind ever executed, as few are willing to bring to such an undertaking an equal amount of patient industry, and few are so well acquainted with the subject discussed. But his report was prepared ten years ago, since which the internal commerce of the country has doubled in value. In 1855, an elaborate report was submitted to Congress in reference to this trade, which gave the following aggregates, for the several lake ports:

Districts.	Ton'ge enter'd and cleared.	Value of Imp'ts & Exp'ts
Cuyahoga	1,782,493	$162,185,640
Buffalo Creek	3,330,232	303,023,000
Sandusky	—	59,966,000
Maumee	1,034,644	94,107,000
Chicago	2,632,000	238,878,000
Detroit	1,538,000	140,000,000
Milwaukee	—	35,000,000
Oswego	1,607,000	146,235,000
Sackett's Habor, Cape Vincent, Oswegatchie, Genesee, Niagara.	.... —	42,226,000
Presque Isle, Michilimackinac	Omitted.	
Exports and Imports		$1,216,620,640
Total value of Lake Commerce excluding Presque Isle and Michilimackinac		$608,310,320

Tonnage of the Lakes for 1854 *and* 1855, *including the Steam Tonnage for* 1855.

	—Tonnage— 1854.	1855.	Steam Ton'ge. 1855.
Sackett's Harbor	7,570	6,227	1,944
Oswego	24,365	42,460	5,199
Genesee	—	233	128
Niagara	868	403	128
Oswegatchie	3,744	4,485	3,042
Buffalo Creek	82,678	76,952	38,262
Cape Vincent	4,866	6,609	1,143
Presque Isle	8,210	9,269	4,720
Cuyahoga	45,483	51,078	15,012
Sandusky	6,084	8,051	306
Miami	5,479	3,763	115
Detroit	52,363	65,058	32,180
Mackinaw	3,393	4,431	2,397
Milwaukee	14,117	15,673	288
Chicago	31,041	50,972	3,207
Total tonnage	291,231	345,729	108,243

Increase of Lake tonnage (steam and sail) from June 30, 1854, to June 30, 1855, a fraction over 18.8 per cent.

Ratio of steam to sail tonnage for 1855, a small fraction less than ⅓.

With regard to the commerce of the rivers we have nothing better than the estimates and statements of the Boards of Trade, and of Prices Current of a few cities lying upon them. According to these, the value of the imports into Cincinnati for 1860 was $107,647,216; exports, $119,637,188. Those of St. Louis were still greater. Of smaller ports we have no account whatever, and this branch of the subject is referred to, rather as an important field of inquiry, which should immediately engage the attention of the General Government, than with any purpose of giving estimates of such commerce even approximately correct.

Assuming the correctness of the estimates given, a most important lesson is taught as to the relative value of the crops and wealth of different portions of the country. I do not desire to introduce political or social questions, but there is no doubt that the value of the tonnage of the public works of New York is four times greater than that of a full cotton crop. Very exaggerated notions have been entertained as to the value of this crop compared with that of the products of the whole country. It is doubtful whether it equals in value *one-twenty fifth* of the whole. The strength displayed by the North in the present contest fully confirms this estimate. With one half, in area of the United States actually isolated from it, the strength of the Government does not seem to be weakened either in men or money. There has been a great amount of individual loss and suffering, but the North carries the load imposed upon it without feeling the burden, and has for the first time in its history, come to something like a consciousness of its real strength. The concurrence of a dearth in Europe, with abundant crops in the Northern States, undoubtedly proved our salvation; but all this would not have availed us, had we not accumulated the means for their transportation. If the North, twenty years ago, had foreseen the rebellion, and commenced what would have been deemed adequate preparation for the crisis, it must have succumbed, as such preparations would have checked the progress of its public works and wealth to such a degree as to have left it incapable to putting forth the strength necessary to crush a gigantic insurrection. If it had happened that the Erie Canal had had four feet of water instead of *seven*, the demand for breadstuffs could not have been supplied. The balance of trade would probably have been so largely against us as to have forced the Banks to suspend specie payment and perhaps involved people and Government in a common ruin. But this great work, so silent in its operations that hardly any one is conscious of its existence, has safely carried us through a storm which all intelligent foreigners believed would soon make financial, and then political shipwrecks of our country. Under incredible difficulties, the strength it has displayed is the most marvelous thing in this land of marvels.

Since the construction of the Erie Canal, and our system of railroads, every year has greatly added to the area from which this City draws its trade. The possible extent of this area becomes a question of the utmost importance, in view of the closing of Southern harbors, either by a temporary or permanent blockade—by a stone or a steam fleet. It is a remarkable fact that, however important it may be to keep Southern ports open to preserve capital already invested in them, and for the purpose of maintaining an established route, they might all be closed without reducing, except temporarily, the volume or value of Southern products, especially *cotton* and sugar. Previous to the rebellion, nearly all the sugar grown in Louisiana went up the Mississippi River. Cotton had begun to move largely in the same direction. New Orleans had almost entirely ceased to be the port of export, either coast-wise or foreign, for the grain or food crops of the West. The total exports of these articles from that city the past year was as follows:

Exports to	Flour, bbls.	Pork, bbls.	Bacon, casks.	Lard, bbls.	Beef, bbls.	Corn, sacks.
New York	10,862	868	271	9,948	9,878	37,243
Boston	41,524	2,097	91	1,061	1,696	22,410
Philadelphia	—	—	—	280	10	—
Baltimore	—	—	—	—	—	—
Oth. constw. p'ts	247,231	45,572	28,565	7,396	3,019	498,916
Great Britain	6,341	89	—	7,846	5,496	52,448
Cuba	6,478	1,307	1,461	37,380	735	27,065
Oth. foreign ports	74,115	3,120	305	6,461	863	14,288
Total	386,511	53,050	30,693	70,852	21,699	652,370

Of the Breadstuffs exported from New Orleans the past year, only 58,727 barrels of Flour and 112,101 sacks of Corn were sent to the Eastern States and Great Britain, the value of which did not exceed $576,564. Of Provisions there were exported in the same direction 3,055 barrels of Pork, 362 casks of Bacon, 18,871 barrels of Lard, and 17,082 barrels of Beef, the value of the whole not exceeding $600,000. In other words, the total exports of Breadstuffs and Provisions, the products of the Mississippi Valley, sent to the Eastern States and Great Britain, the past year, did not exceed $1,200,000 in value, against a tonnage of the same articles, equaling $200,000,000 in value coming to the water, over the public works of New York. Already has this city swept clean the northwest. The same law of attraction that had turned to its harbor the food grown in the great valley, was bringing its cotton, and would have soon brought to us a large portion of the crop, had peace and harmony in domestic relations continued. From Cairo cotton can be forwarded to Liverpool as cheaply through New York as through New Orleans. The belt for the production of this staple lies midway between this point and New Orleans, and it can be laid down as cheaply at one place as the other. The same thing may be affirmed of the crop grown in Western Alabama as well as in the States lying upon the Mississippi and its tributaries. The cotton of South Carolina and Georgia can go forward to Liverpool through the interior routes, and by way of New York, at a cost not exceeding one cent per pound that of sending it direct from Savannah and Charleston. These statements could be easily demonstrated by the introduction of a few freight bills of railroad companies and forwarders. By closing Southern ports we need not fear any harm to commerce, the moment the people there make up their mind to trade.

Lexington, Nicholasville, Danville and Knoxville Railroad.

It is said that a contractor is now in Kentucky who will proceed immediately to construct the military railroad from Nicholasville on to Knoxville, and that he expects to complete the road to Danville in sixty days, and the balance of the route in "double quick." It will be recollected that the lower House of Congress repealed the law authorizing the President to construct the road, but the Senate refused to concur.—*Lexington Observer.*

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bonds fall due at different periods

American Railroad Journal.

Saturday, April 5, 1862.

Share and Money Market.

The Share Market the past week has been regular, with a slightly declining tendency. No other explanation is offered but the prevailing uncertainty in reference to military events, which are now pending on a grand scale. There has been but slight fluctuations in prices. Governments have shared in the decline, although investments in these continue very active, and they have been and still are, regarded with great favor. Money is abundant, and must become more so by the rapid issue of the new Treasury Notes, which are now rapidly coming upon the market. It is the general conviction that these must exert a strong influence upon prices of all kinds, though we can hardly expect much of a movement in stocks, till some decisive event takes place. Exchange shows an upward tendency, as does gold—the price of the two naturally keeping pace with each other. The price of the former may be quoted at 112 to 112½; the latter at 102 to 102¼.

Locomotive for Sale.

See Advertisement of Messrs. Holden, Hawley & Co., in Advertising columns.

Northern Central Railway.

We give elsewhere an abstract of the report of this company for the year 1861. It will be seen that the gross revenue exceeds that of the previous year $399,874 35, with a diminution in expenditures of $52,643 34. The following is a comparative statement of the revenue of the past and preceding years, with the sources from whence it was derived:

	1860.	1861.
Freight	$674,142 31	$682,062 98
Passengers	242,819 28	280,359 24
Mail	25,450 00	25,450 00
Express	14,400 59	24,885 92
United States	.....	336,835 49
State of Pennsylvania.	.....	24,039 84
W., Y. & G. R. R.....	25,529 50	23,440 33
Sunbury & Erie R. R.	27,951 91	.....
Sundries	7,809 12	20,903 76
	$1,018,102 71	$1,417,977 06

The following is a comparative statement of working expenses during the same time:

	1860.	1861.
Transportation expenses.	$291,501 18	$306,023 00
Repairs of machinery...	168,183 41	149,295 52
" railway.....	239,431 15	179,117 09
General expenses.....	35,259 80	47,396 59
	$734,475 54	$681,832 20

The following is a condensed monthly statement of the revenue and expenses for the year 1861:

	Gross revenue.	Working expenses.	Net revenue.
January ...	$66,890 49	$46,014 40	$20,876 09
February...	69,265 23	44,119 15	25,146 08
March	77,796 44	53,775 88	24,020 56
April	83,306 98	41,259 56	42,047 32
May	70,278 82	38,178 84	32,099 98
June.....	108,914 74	47,460 98	61,453 76
July.....	171,251 10	49,845 22	121,405 88
August	148,594 83	50,875 49	97,719 34
September..	150,334 57	52,727 06	97,607 52
October....	153,045 97	80,677 35	72,368 62
November..	147,654 92	65,221 59	82,433 33
December..	170,643 07	111,676 68	58,966 39
Totals.	$1,417,977 06	$681,832 20	$736,144 86

The following will show the cost, earnings and expenses yearly from 1855 to 1861, including earnings and expenses of leased roads:

	Cost of road, etc.	Miles opera'd.	Gross earnings.	Operating expe's.	Net earn'gs.
	$		$	$	$
1855..	5,272,367	132.5	688,026	405,844	282,182
1856..	6,451,946	132.5	789,853	477,862	301,991
1857..	7,238,540	157.0	840,675	557,391	283,284
1858..	7,941,180	218.0	815,373	422,822	392,551
1859..	8,244,636	222.0	929,527	589,012	340,515
1860..	8,409,505	222.0	1,018,102	734,475	283,627
1861..	8,228,731	155.0	1,417,977	681,832	736,145

From the commencement of 1855 to the close of 1858 the company operated the Westminister branch and the Hanover branch roads. The contract with the Wrightsville, York and Gettysburg Railroad, which commenced with 1855, terminates with the year 1864. The company also commenced running the Sunbury and Erie Railroad, from Sunbury to Williamsport, 40 miles, in July, 1858, and from Williamsport to Lock Haven, 25 miles, in July, 1859. The company ceased to operate the Sunbury and Erie Railroad at the 30th of June, 1860.

The Fairmount Rolling Mill.

By reference to the advertisment of Messrs. M. Thomas & Sons, in another column, it will be seen that this mill is to be sold by auction at the Merchant's Exchange, Philadelphia, on Tuesday, the 6th of May next, to close the affairs of the firm of Charles E. Smith & Co. The mill is so well described in the advertisement, and so well known to the community at large as to render it needless for us to do more than call the attention of the public to it. The sale will be without reserve. Terms easy. Title indisputable. The mill is now in full operation; and ample time is afforded before the day of sale for purchasers to view the premises.

Jersey City Locomotive Works.

There are now on hand and for sale at these works, four first class new locomotives, constructed with the latest improvements, and of the best material and workmanship. These works furnish Low Moor Tires, and Portable and Stationary Steam Engines of all sizes. See advertisements of Wm. G. Hamilton, Esq., Vice-President and Engineer, in another column.

Illinois Central Railroad.

We give below a copy of the Report of the President of this Company for the year ending December 31, 1861:

The favorable condition of your property in the early months of last year arose largely from the through traffic with the South. The result of the completion of the connecting lines with Mobile and New Orleans, during the previous year, gave promise of a surplus beyond the interest of the debt, to provide a dividend on the Share Capital.

The net profits of the first quarter's traffic were $354,718 96, the land sales and collections were alike satisfactory, and we felt justified in the belief that the difficulties which had attended our enterprise had been surmounted.

The Government placed a force at Cairo in April. Communication with the South being prohibited, our through business was out off—the freight traffic at Cairo, from $117,000 per month the first 4 months, decreased to $103,-122 18 for the entire eight months following. Our interests suffered both in the loss of business (the transportation to Cairo having fallen off from 92,000 tons in the first four months to 20,000 tons in the last eight months), and in the lack of ability of the farmers upon our line to meet their engagements in consequence of the loss of their usual market. Our line for 253 miles south of the Terre Haute and Alton Road is now mainly of use for the transportation of Government troops and stores, and must remain so until the settlement of our national troubles.

With the very abundant harvest of wheat and corn, the local traffic of our line north of the point named would have supported the entire road, with ordinary market prices for the products of the country, but the surplus crops of the North-west were thrown on the lakes; the supply of vessels and canal boats was inadequate to the sudden unexampled demand for transportation, which consequently rose rapidly in price and reduced the net price of his products to the Illinois farmer to so low a point as to leave no margin for profit.

The bank issues in this State were largely based upon the securities of the Southern States. The overthrow of this currency caused the withdrawal of $12,000,000 of paper in circulation with great loss to the holders, thus adding to the general confusion caused by the unexpected war which has transferred in Illinois alone 65,000 to warlike pursuits from the ordinary occupations of civil life.

In this state of things, our first effort was to reduce the expenses; secondly, to secure grain from the purchasers of lands, in payment of their contracts.

The working expenses from the 1st of January to the 1st of July were $817,890 86; from the 1st of July to the 31st of December, $637,063 01; the expenditures on capital account, including $64,487 62 for one engine and sixty-three cars (constructed early in the year) are $297,597 31.

We have contracted for two iron bridges to be delivered this year, and shall construct a new bridge at Chicago, but the entire expense for capital account should not exceed $150,-000, and the working expense $1,450,000.

Receipts of grain for lands were commenced in August and 1,860,000 bushels of corn were delivered and shipped throughto New York for sale—the first shipments at a small profit. The great advance in lake and canal freights not only cut off this profit, but will produce a loss, which however will be compensated in some measure by the purchase of the construction bonds at a discount. We are now taking corn in the car, and have already 300,000 bushels stored near Chicago. From 10,000 to 15,000 bushels are sent in daily; and this appears to the most practical method in these hard times, for the Western farmer, of meeting his desire to pay his debts, and securing to the Company partial payments of the large amount of notes it has on hand.

The road forwarded last year 50 per cent. more grain than in 1860, and five times as much as the total of 1855. Fifteen millions of bushels in twelve months is the most striking proof of the rapid development of the prairies; and now, with the necessities growing out of the war, Sorghum (or Chinese Sugar Cane) is successfully cultivated; some 1,500,000 gallons of molasses were produced last year; and the cultivation of Cotton in Southern Illinois will be resumed if seed can be obtained—the culture of cotton was not abandoned in this State until the price of Upland declined below ten cents per lb., at this price it is generally believed that it can be grown profitably, and to a large extent. Three-fourths of the citizens of Southern Illinois, originated from the Southern States, and are familiar with its culture. The Agricultural Department of the general Government has taken steps to secure a supply of seed.

Illinois has eight or ten million acres of land, with the climate of Virginia and Kentucky, and will furnish, should the national troubles continue, large supplies of tobacco, besides other semi-tropical products. At no period has this State occupied so prominent a position in the public mind, its immense shipments of grain, cattle, and provisions, controlling the prices in the Eastern markets. Even during these Winter months, the sale of cattle, provisions, etc., are said to exceed one million dollars per week. The troubles and losses incident to the war must turn the attention more directly to these cheap and fertile lands, and concentrate population upon them.

It would be unjust to the distant owners of this property to shrink from an expression of apprehension in regard to the income of this year, especially from passenger traffic, so long as the Southern insurrection continues. The gross passenger receipts in 1861, were only $661,392 72 being less than the receipts of 1855, and $451,009 less than the receipts of 1856.

The War Department has agreed to allow the actual expense of transporting troops, but the major part of this service $207,128 64 performed in 1861, is still unpaid. The first quarter will show a large decrease in freight earnings, for there is no way to recover the loss of business at Cairo, and while our communications with the South are cut off, we cannot escape the inevitable consequences of loss and uncertainty.

The unexpected intervention of special causes has arrestedthe prosperity of the company, at the moment when it seemed upon the most secure footing. It is beyond individual power to re-establish it until the relations with the South are renewed, or until higher prices for the produce of the country place our farmers in better circumstances.

The general balance sheet is as follows:

	DR.	
Permanent expenditures		$27,492,988 12
Interest account	$6,425,498 40	
Less avail of int'st fund	1,447,132 18	—4,978,366 22
Working stock of supplies		488,103 50
Miscellaneous assets, New York	$442,900 88	
Miscellan's assets, Chicago	101,665 02	— 544,565 90
Total		$33,504,023 74

	CR.
Capital stock	$15,829,095 00
Funded Debt:	
Construction bonds, due April 1, 1875 — $14,913,500	
Optional right bonds, due Feb. 20, 1868 — 38,000	
Eight per cent. bonds due March 1, 1865 — 326,000	—15,277,500 00
Construction bonds canceled by land department collections	2,086,500 00
Free land bonds canceled by land department collections, to June 1, 1859	138,000 00
Net floating liabilities	172,928 74
Total	$33,504,023 74

CAPITAL STOCK.

Of the 255,000 shares, 179,454 have been issued represented by 87,633 shares of $100 paid				$8,763,300
Do. do.	87,798	"	80 "	7,023,840

Add balance at debit of the account in last report	4,996,213 68
Total amount of debit as shown in general balance sheet	$6,425,498 40

The report of the Superintendent says:

The operations of the Illinois Central Railroad for the year 1861 have been seriously deranged by the service required by the State of Illinois and the General Government. The demand for trains for troops and munitions of war have ever had preference over our regular business, and the necessity to make up large trains for troops, munitions, &c., has obliged us to sacrifice at times our local traffic. The allowance made by the War Department is about two-fifths of our regular tariff charges for troops and two-thirds for munitions, and is thus entered in the subjoined tables, viz: $207,128 64. This sum, with $66,155 23 earned over the Peoria and Oquawka Road, not credited in the Treasurer's statement, make the total earnings $2,965,767 87—an increase of $187,434 38 over the earnings of 1860, per following table:

COMPARATIVE STATEMENT OF EARNINGS IN THE YEARS 1860 AND 1861.

	1861. Total earnings.	1860. Total earnings.
Freight	$1,976,136 20	$1,737,196 34
Passengers	804,769 19	846,693 06
Extra Baggage	1,454 28	2,002 59
Mails	76,300 00	76,300 00
Express	29,042 52	29,336 28
Rents	5,587 11	4,594 44
Rent of Property	69,792 15	68,293 30
Rent of Property & Cars	2,453 15	13,748 80
Storage & Dockage	236 27	163 58
Total	$2,965,767 87	$2,778,333 49

In the working expenses as shown in the following comparative statement with those of 1860, the items of Charter Tax, Loss on Currency, Loss and Damage by Fire, Interest and Insurance, are not included:

The reduction in expenses is $193,570 38, and the proportion of expenses to gross earnings in 1861 is 49 1-10 per cent. against 59 35-100 per cent in 1860.

COMPARATIVE STATEMENT OF OPERATION EXPENDITURES FOR 1860 AND 1861.

	1860.	1861.
Salaries	$73,248 90	$72,168 03
General expenses	75,031 89	74,729 60
Legal expenses	12,383 10	10,043 58
Claims and damages	21,537 10	18,602 53
Station expenses	259,563 76	244,315 02
Train expenses	375,306 15	362,636 37
Maintenance—machinery	328,336 35	319,592 53
Maintenance—road	496,470 19	341,444 53
Repairs of fencing	3,301 13	11,904 69
Operating St. Charles Air Line	1,523 96	685 77
Total	$1,649,693 03	$1,456,122 66

The total land sales for 1861 were 102,247 acres, for $1,541,041. The aggregate sales since the formation of the Company have been 1,236,971 acres, for $16,161,203 15. The unsold acres amount to $1,358,549.

General Statement of Accounts of the Land Department I. C. Railroad Co., Dec. 31, 1861.

STATEMENT OF BONDS CANCELLED.

The amount of Construction Bonds surrendered to us by the Company, is		$2,086,500 00
Of which we applied on the issue of deeds, as per last annual report, the sum of	$305,452 88	
Applied in the same manner during the year 1861	437,569 54	
		741,022 42
Leaving canceled Construction Bonds in our hands, January 1st, 1862		$1,345,477 58

Atlantic and Great Western Railroad.

At a meeting of the stockholders of the Atlantic and Great Western Railroad in Pa., held in Meadville, Jan. 27th, 1862, the following gentlemen were chosen directors for the present year:

President—WM. REYNOLDS, of Meadville.

Directors—G. Church, Jas. E. McFarland, Jno. McFarland, John Dick, James J. Shryock, A. W. Mumford, O. Hastings, and D. A. Finney, Meadville; G. A. Bittenbanner, West Greenville; Robt. Thallon, New York; Marvin Kent, Ohio; Jules Levita, Paris, France.

Responsibility of Common Carriers of Money.

IN THE ABSENCE OF NOTICE THE CARRIER IS AUTHORIZED TO TREAT THE CONSIGNEE AS ENTITLED TO CONTROL THE MANNER OF DELIVERY. IN SUCH CASE A DELIVERY TO AN AUTHORIZED AGENT OF THE CONSIGNEE DISCHARGES THE CARRIER.

The action (Sweet *et al. vs.* Barney *et al.*) was brought against the defendant, an Express Company, as common carriers, to recover the amount of a package of money, received by the defendants directed to the "People's Bank, 173 Canal Street, New York.

Upon the trial of the cause the following facts appeared: The plaintiffs were bankers at Dansville, Livirgston County. They kept an account with the People's Bank, "in which they were in the habit of making deposits and drawing bills of exchange or checks against the same. A package containing $2,892 was delivered by them to the defendant, directed People's Bank, 173 Canal Street, New York; to be forwarded as directed. The package was taken to New York, and delivered at the defendant's office in that city to one Messenger, an employee of the Bank. Messenger had been a porter in the Bank for several years, and was accustomed to receive money brought by the defendant's company at the bank, at the Clearing House, and at the defendant's office. He was also accustomed to act for the Bank in making exchanges and collections with other Banks; and he acted as its representative at the Clearing House, at a desk labelled "People's Bank,"; had there often received packages of money from the defendants addressed to "People's Bank," and giving receipts for the same for said Bank. The defendant's office was in the same building with the Clearing House, and Messenger requested the defendants to keep the packages for the "People's Bank" at their office until he called for them. The defendants did so, and Messenger regularly called for them, and received them and gave receipts. In the eighteen days previous to the delivery of this, nine other packages for the People's Bank were delivered to and received by Messenger without any complaint or objection from the Bank. After the delivery to Messenger of the package in question, it was stolen from him.

It was contended in behalf of the plaintiffs that the duty of the defendants was to deliver the package at the Bank as directed, and that they were not authorized to deliver the same to any person at any place, other than at the Bank. That neither the Bank, nor the defendants were authorized to change the mode of delivery of the package without the consent or knowledge of the plaintiffs; and that such change if made without their knowledge or consent could not discharge the defendants.

The defendants had a verdict at the circuit, which was affirmed at the General Term of the New York Supreme Court, in the seventh Judical District, and the plaintiffs then appealed to the Court of Appeals. The Court held, that a common carrier of money from bankers in the interior of the State to a Bank in New York City, having no notice of ownership, except what is implied from the address of the package, is authorized to treat the consignee as entitled to control the manner of its delivery; and that any delivery which discharges the carrier as between him and the consignee, is good as against the consignor.

The following opinion was delivered at the decision of the case by the Court of Appeals:

JAMES, J. That these defendants were common carriers can hardly be doubted. Persons whose business it is to receive packages of bullion, coin, bank notes, commercial paper, and such other articles of value as parties see fit to trust to their care for the purpose of transporting the same from one place to another for a compensation, are common carriers, and responsible as such for the safe delivery of property intrusted to them. Such was the business of these defendants, and such their responsibility.

The consignee is the presumptive owner of the thing consigned; and when the carrier is not advised that any different relation exists, he is bound so to treat the consignee; but this presumption may be rebutted; and if in an action for non-delivery by the consignor against the carrier, that presumption be overcome, the action is properly brought in the consignor's name. But in this case, unless a delivery of the money be established, the plaintiff's right to recover was made out.

There was no notice that the contents of the package in question belonged to the consignors: nor was there any fact proved, calculated to weaken the presumption of ownership in the consignee. The defendants were, therefore, not only authorized but fully justified in treating the consignment as the property of the bank. The defendants could not know that they were employed to make a deposit in the "Peoples Bank" for the benefit of the assignors; or that this package was entitled to demand a special delivery. There was in fact, nothing in the transaction to advise them that this package was to be treated differently from other packages actually belonging to the Bank; and therefore, any delivery good against the bank, discharged the carrier.

The principal question then is, was there a delivery good against the Bank; if there was the plaintiff must follow the Bank; they have no cause of action against these defendants. It is conceded that the liability of a carrier begins with the receipt of the goods by him, and continues until the delivery of the goods by him, subject to the general exceptions. And an express carrier is bound to deliver the goods at their destined place, to the consignee, or as the consignee may direct. In general, the delivery must be to the owner or consignee himself, or to his agent, or they must be carried to his residence, or they may be taken to his place of business, when from the nature of the parcels that is the appropriate place for their delivery. But there is no rule of law requiring a delivery at the consignees residence or place of business, when he is willing to accept it at a different place, or directs a delivery at another place. The consignee, or his authorized agent, may receive goods addressed to him in the hands of a carrier at any place, either before or after their arrival at their place of destination, and such acceptance operates as a discharge of the carrier from his liability. It was held in *Lewis vs. The Western Railroad*, (11 met. 509), that if A. for whom goods are transported, authorizes B to receive a delivery thereof, and to do all acts incident to the delivery and transportation thereof to A, and B instead of receiving the goods at the usual place of delivery, request the

agent of the Railroad to permit the car which contains the goods to be hauled to a near depot of another company, and such agent assents thereto, and assists B in hauling the car to such depot, and B then requests and obtains leave of that company to use its machinery to remove the goods from the car—the company that transported the goods is not answerable for the want of care or skill in the persons employed in so removing the goods from the car, nor for the want of strength in the machinery used for the removal of them, and cannot be charged with any loss that may happen in the course of such delivery to A.

Had the consignee in this case received the package in question at the defendants' office, I think no one would doubt the defendants were discharged. The case then turns upon Messenger's agency. If an authorized agent in the premises, a delivery to him was as effectual as a delivery to the principal. The question of agency was a question of fact, and was settled by the verdict of the jury.

We think the delivery at the office of the defendants to the authorized agent of the consignee was proper, and operated to discharge the defendants from their obligations as carriers.

This disposes of the case unless there was some error committed at circuit in submitting the question of Messenger's authority to the jury, or in the courts refusing to charge as requested. I have been unable to discover any such error. The evidence submitted was competent—it was of the most perfect and satisfactory kind, and not only justified but required the verdict rendered. The judgment should be affirmed.

Interest and Dividends.

The Panama Railroad Company has declared a dividend of 3 per cent. out of the earnings of the road for the three months ending 31st ult., payable to stockholders or their legal representatives on and after the 5th of April.

The Lowell and Lawrence Railroad Company has declared a dividend of $3 per share, payable April 1.

The Rensselaer and Saratoga Railroad Company has made its thirty-seventh dividend—3 per cent.—payable April 1.

Interest on Brooklyn Central and Jamaica Railroad Bonds, due on April 1, will be paid at the City Bank of Brooklyn.

The Cleveland and Toledo Railroad Company have declared a dividend of 3 per cent. payable April 25th, at the office of Messrs. Vermilye & Co., New York. After the 25th day of May next, the dividends remaining unpaid will be paid at the office of the Company in Cleveland, in sight exchange on New York.

The coupons on the mortgage bonds of the New York and New Haven Railroad, due on the 1st of April, will be paid at the office of the company, corner of Fourth avenue and Twenty-seventh street, or at the Bank of the Republic.

Messrs. Duncan, Sherman & Co., pay the April coupons of the Buffalo and State Line Railroad Company, as well as the income bonds due 1st inst.; also, the coupon on the bonds of the St. Mary's Falls Ship Canal Company.

The holders of the coupons of the St. Louis county bonds, due June 1st, 1862, are officially notified that they can now receive the money for them in current funds, upon application at the Treasury in St. Louis, thus anticipating their maturity for two months.

The Philadelphia, Germantown and Norristown Railroad Company has declared a dividend of 3 per cent., payable April 1.

We learn that this company has accepted the act of the Legislature authorizing it to make a loan not exceeding $450,000 for the purpose of paying off loans about falling due, amounting to $374,800, and to pay off other indebtedness, as mortgages and ground rents. All of said new loan to be convertible into the stock of the company at any time within five years of the maturity of said loan.

Railroad Earnings--Weekly.

The earnings of the Toledo and Wabash Railroad for 3d week of March, 1862, were.	$12,094 13

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.				Sheet No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
2.	For Side Hill Cuts and Fills.			14.	" 20 "		1½ to 1
3.	Base 12 ft.	Slopes	1½ to 1	15.	" 24 "		¼ to 1
4.	" 14	"	1½ to 1	16.	" 24 "		1½ to 1
5.	" 15	"	¼ to 1	17.	" 25 "		1½ to 1
6.	" 15	"	1 to 1	18.	" 26 "		1½ to 1
7.	" 15	"	1½ to 1	19.	" 28 "		¼ to 1
8.	" 16	"	¼ to 1	20.	" 30 "		1 to 1
9	" 16	"	1 to 1	21.	" 30 "		1¼ to 1
10.	" 18	"	¼ to 1	22.	" 30 "		1½ to 1
11.	" 18	"	½ to 1	23.	" 32 "		1 to 1
12.	" 18	"	1 to 1	24.	" 34 "		1¼ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

MANUFACTURE to order all kinds of Light and Heavy Forgings and Hammered Shapes, such as

Car Axles, Crank Axles,

TRUCK AND DRIVING AXLES,

Steamboat and Propeller Shafts and Cranks.

MILL SHAFTS, LOCOMOTIVE FRAMES, CONNECTING RODS, PISTON RODS, CRANK PINS,

Wrought Shafting of any Length and Size, etc., etc.

Also, Every Description of HEAVY BLACKSMITHING.

Orders or inquiry by mail, will receive prompt attention.

Address T. D. PATCHIN, BUFFALO, N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

RAILROAD IRON.

THE
RENSSELAER IRON COMPANY,
TROY, N. Y.,

OFFER RAILS of their own manufacture deliverable as may be desired by purchasers.

OLD RAILS

received in exchange for new, or for re-manufacturing.

JOHN A. GRISWOLD, Agent,
TROY, N. Y.

New York Agency:
BUSSING, CROCKER & CO.,

American Railroad Journal.

New York, Saturday, April 12, 1862.

Boston and Lowell Railroad.

We have received a copy of the report of this company for the fiscal year ending September 30, 1861, from which we learn that the gross receipts from operation of the road during that time were:

From passengers	$187,055 44
" freight, etc	279,088 76
" mails and express	13,112 44
" rents	329 86
	$479,586 50

And the expenses were:

Repairs of road	$58 113 57	
" engines	17,095 04	
" cars	31 326 71	
" bridges	5,690 57	
" depots, etc.	13,162 96	
Merchandise expenses	30,929 02	
Wages	51,303 05	
Taxes, insurance, etc.	14,050 35	
Fuel	37,890 42	
Rents to all other roads	39,316 20	
All other expenses	35,080 72	
	$333,948 61	
Balance interest account.	26,341 73	
		360,290 34
Net income		$119,296 16

The gross income for the year from traffic of the road has been $479,256 64; and the net income $145,308 03. The decrease in gross receipts compared with those of the previous year, has been $64,440 14; in expenses, $25,468 08; and in net income, $38,972 06.

Since the last annual report, two dividends have been ordered, one of which, 3 per cent. was paid July 1, 1861, and the other 2¾ per cent. January 1, 1862.

The balance of the interest account, and all dividends payable to stockholders during the year have been placed to the debit of profit and loss before that account was made up.

The balance to credit of profit and loss September 30, 1860, was	$375,757 38	
The net receipts from the traffic of the year have been	145,308 03	
The net receipts from other sources have been	329 86	
		$521,395 27
During the year that account has been charged with the amount of two dividends paid	$128,000 00	
Balance of interest acc't.	26,341 73	
		154,441 73
Leaving present balance to that acc't.		$366,953 54
From which is to be deducted the amount of a dividend payable January 1, 1862		50,325 00
Surplus		$316,628 54
Add balance " accumulation of sinking fund"		11,707 69
Making the whole amount of the reserved funds		$328,336 23

The amount of the sinking fund September 30, 1861, was $112,357 69, which was to have been increased on the 31st of December, by the amount of a semi-annual deposit of $9,150, and of one year's accumulation. In accordance with the terms of the contract with the holders of the bonds of the company, that fund has been increased during the past year, by payment to the trustee of $18,300, and by accumulation $4,507 28. The whole amount of the fund is invested by the trustee in policies at the Massachusetts Hospital Life Insurance Company.

The whole debt of the corporation, as stated in the annexed balance sheet is $462,382 50.

No addition has been made to the construction account—all sums expended having been charged to the current expenses of the year.

The condition of the corporation is as follows:

ASSETS.

Cost of road, depots and equipment	$2,428 592 79
Notes receivable	3,588 87
Trustee of sinking fund	112,357 69
Flats at East Cambridge	6,796 33
Fuel, materials, etc., on hand	86,685 73
Cash	33,022 32
	$2,671,043 73

LIABILITIES.

Capital stock	$1,830 000 00
Bonds, 1873	440,000 00
Notes payable	18 000 00
Dividends, etc	4,382 50
Balance profit and loss	366,953 53
Bal. accumulation of sinking fund.	11,707 69
	$2,671,043 73

President—F. B. CROWNINSHIELD.

Directors—F. B. Crowninshield, J. G. Abbott, Isaac Hinckley.

Treasurer—J. THOMAS STEVENSON.

Manager—GEO. STARK.

Superintendent—J. B. WINSLOW.

The Trade and Commerce of Montreal.

The first annual statement of the trade, commerce, etc., of Montreal is a very large document, filling four pages of the *Gazette*. Some valuable improvements for the collection and arrangement of statistics have been made in that city, under the direction of its Board of Trade. Like most of our own cities we find that in Montreal business of all kinds vacillated greatly in 1861. In the beginning of it, the prospects were bright, owing to the previous good harvest; but the severe storms of the winter had a very depressing effect, obstructing the Grand Trunk Railroad, with its vast supplies of grain, etc., coming forward. Next was the outbreak of war in the United States, and about the same time some of the heaviest floods ever experienced in the Provinces. When the navigation opened, Montreal had an immense flood of produce poured into her, but serious delays took place from the opening of the canals. In spite of these drawbacks, however, it is believed that city sustained fewer losses than those situated further westward.

During the year three ocean steamers running

on the St. Lawrence route have been lost—the United States, the Canadian and the North Briton, the second and third belonging to the Montreal Steamship Company. The want of more lights in the Gulf is deeply felt. In the city, a horse railroad has gone into successful operation, having been opened in November last. The Grand Trunk Railway Company are making arrangements to establish a permanent terminus, which will be a great convenience to the place.

The following table shows thet otal value of imports into Montreal for the past ten years:

1851	$9,178,840
1852	9,245,884
1853	14,014,788
1854	16,221,004
1855	12,372,580
1856	16,144,696
1857	16,848,536
1858	11,584,068
1859	15,690,340
1860	15,479,448
1861	16,814,161

The amount of duties collected last year was $2,391,819, against $2,452,249 in 1860. This decrease is said to arise from two causes—a serious reduction in the duties on tea and sugar, and from a considerable amount of imports being held over in bond, the duties on which will go to swell the present year's returns. The annexed statement shows the exports of Montreal, Coaticook and St. Johns for the last three years:

PORTS.	1859.	1860.	1861.
Montreal	$3,044,762	$6,956,236	$10,415,738
Coaticook	1,487,217	2,576,222	.....
St. Johns	1,867,868	2,800,633	719,367
Montreal, articles, produce of U.S.	56,376	781,651	3,505,611

The falling-off of exports from St. Johns is believed to be due to the troubles existing in this country: and show how intimately the prosperity of each community is bound up in that of its neigbors.

The arrivals at Montreal last year were 503 vessels, with an aggregate tonnage of 245,562 tons, against 240 vessels and 118,216 tons in 1860. The latter exceeded any previous year's tonnage by nearly fifty per cent.

The river trade returns are presented for the first time. Its extent is said to be a great deal larger than was generally believed. Below we give a few of the principal exports down the river to Quebec, Three Rivers, Terrebonne, etc.

Flour	Bags 36,070; Bbls.	273,526
Oatmeal	"	2,220
Pork	"	7,059
Butter	Tubs	1,871
Wheat	Bushels	176,281
Barley	"	22,587
Peas	"	28,009
Hides		16,722
Cattle		1,185
Sheep		1,272

Among imports up the river we observe the following:

Potatoes	Bushels	57,452
Oats	"	153,104
Peas	"	18,193
Seeds	"	12,734
Butter	Tubs	4,332
Cattle		3,385
Sheep		20,764

There is still a large city trade which can only be guessed at, that of produce sold to parties outside of the regular markets. Thus, while the receipts of grain last year, reducing flour into wheat, were equal to 18,779,071 bushels, it is stated that at least five million bushels additional were sold to distilleries, breweries, etc., bringing the whole up to nearly twenty millions of bushels.

The population of Montreal last year was 91,006, against 57,715 in 1852—an increase of 56 per cent. in nine years. Of the inhabitants 42,886 are of French and 21,647 of British Lower Canadian origin, 4,394 are natives of England, 3,235 of Scotland, 14,469 of Ireland, 1,208 of the Upper Province, and 1,706 from the United States. The numbers from other countries are comparatively small.

Attention is called to the lack of harbor accommodations, the port having been inconveniently crowded last year by the unusually large number of vessels arriving. It is suggested that the basins on the eastern side of the city might be easily dredged so as to admit sea going vessels. The number of elevators was also too small; but three new ones are soon to be built, making eight for the ensuing season. An officer is also to be appointed for the inspection of grain, and a Port Warden to see that vessels are properly lined and dunnaged. As a good deal of grain was shipped in an unfit condition, last year, it is believed this abuse will be henceforth prevented. Some reforms in the piloting of vessels are pointed out.

The following table shows the number of vessels which arrived from the principal European ports trading with Montreal, whether bringing general cargoes, coal and iron, or in ballast.

Ports.	Gen. Cargo.	Coal, etc.	In Ballast.
Liverpool	68	40	17
Glasgow	39	9	7
London	14	1	14
Sunderland	1	10	2
Bristol	..	2	7
Maryport	..	3	2
Shields	2	5	..
Newcastle	1	5	..
Lower Ports	107	..	12
Quebec	..	..	22

The principal points to which exports were sent were as follows:

	Vessels.	Tons.
Liverpool	146	126,327
Glasgow	68	45,883
London	57	27,551
Bristol	20	8,532
Cork	40	14,732
Lower Ports	102	7,862
Quebec	3	1,579

The aggregate amounted to 494 vessels and 250,281 tons, against 229 vessels and 116,748 tons in 1860.

Of the general tonnage carried by ocean steamers, the outward freight in 1860 was 35,229 tons, and for 1861, 38,054 tons.

The storage of Montreal has a capacity of 708,000 bushels of wheat and 333,100 barrels of flour. Although this shows a considerable amount, it is stated that at a slight expense very much increased accommodations could be provided. The various steamboat lines running inland have a total capacity of 66,450 barrels of flour; and the schooners, 819,000 bushels of wheat. The latter are exclusive of western schooners trading on the lakes, and of several which have been recently chartered

Underneath we give a condensed report of the various other subjects alluded to in this report:

Freights.—Freights to Liverpool ranged from 8*s.* 3*d.* sterl. per barrels of flour to 5*s.* For grain, from 6*s.* to 9*s.*, and at the close of navigation, to 12*s.* per quarter. Inland freights were on the whole satisfactory, but with high rates after the 10th of October, caused by the propellers being taken from the lakes.

Groceries.—The trade in groceries was subject to many fluctuations. In spring imports were heavy: but the sales did not equal exportations for reasons already stated. The business improved greatly in the fall season.

Sugar.—In spring the stock were small, and the prices fair for a time, but declined until June. Next month a rally took place and continued till September. The year closed with but moderate stock on hand. Total imports, cwts. 222,242.

Teas.—The causes which led to such fluctuations in the price of teas are of a too general character to require special notice.

Tobacco.—The trade in manufactured tobacco has never been more prosperous. The quantity imported last year was lbs. 709,924.

Coffee.—This article does not yet enter largely into consumption in the market, though the demand is on the increase. The quantity of green coffee imported last year was lbs. 794,935.

Molasses.—The imports last spring were considerably in excess of those in 1860; but later in the season they fell. Total for the year, gals. 790,298.

Dry Goods.—The trade in these has continued to be one of the most important branches of business. Montreal must continue the chief depot of dry goods for Canada, says the report, as the supply comes mainly from Great Britain. During the year the trade was generally remunerative; though the political and other events "caused a very serious crisis among the merchants," during the summer. Last Fall the importations were light and the goods mostly sold at fair prices. Lower Canadian manufactures are rapidly supplanting the foreign articles. The total value of these imports in 1861, is given at $6,559,097, of which $3,051,560 were cotton goods, $2,452,776 woolen, $494,233 silk, and $192,858 linen.

Hardware.—The imports of hardware were full though not in excess. Sales exceeded those of 1860, and were pretty steady all the year round. Value of aggregate imports, $1,528,584.

Liquors.—The imports of these are said to be annually becoming less. The quality of wines is also inferior to that called for during the late speculative period. As the liquors produced in Canada are less liable to adulteration than those imported, the former are gradually supplanting the latter. The imports of brandy were 62,619 gallons; of gin, 89,975; of rum, 12,576 and of whiskey, 6,974 gallons.

Grain and Flour.—The import of flour from all parts last year was 939,064 barrels, and the quantity ground in city mills, 192,652 barrels. Of the exports 651,945 were sent directly to foreign ports and 273,526 to Quebec and intermediate river ports. "Superfine" ranged in price from $4 40 to $5 60, and "Extra" from $5 50 to $6 25. The shipments of wheat were to foreign ports, 5,936,643 bushels, and to Quebec, etc., 176,261, making an aggregate of 6,112,914 bushels.

The manufactures of Montreal are assuming a degree of importance. Among the establishments are two rolling mills for making nail-plate iron, with a capital of $300,000. They employ 220 men and boys and turn out 3,600 tons of sheet

iron annually. There are also several nail-making factories, giving employment to 120 persons and producing every year about 3,000 tons of nails. Three establishments are engaged in the manufacture of saws, axes and other edge tools, and have earned a good reputation. Thirteen other foundries turn out large quantities of steam engines, patent safes and castings of all kinds. Besides these are numerous saw-mills and wood factories, ship-yards, an extensive sugar refinery, two India rubber factories, a mill for making drugs and dye-stuffs, a cotton mill, a woolen mill, a rope factory and several large grist mills. But from a considerable number of these works the statistics of capital, productions, etc., could not be obtained.

Relation of the Political Unity of the Country to its Financial Strength.

We give elsewhere from the Circular of a leading financial house in this city, an argument to show the relation that the political unity of the country bears to the financial and commercial prosperity of the Government and the people, and that the contest is one for order, without which we shall, like the republics of Spanish-America, relapse into anarchy, barbarism and poverty. This fact has been most strikingly illustrated by the rapid rise in the market value of the securities of the Rebel States, as they are reduced to subjection to the national authority. The theory is that protection will be extended and obedience to law enforced, under which, society will be soon restored to its normal condition, and resume the discharge of the obligations resting upon it, among the most sacred of which is the public faith. Left to itself it is felt that the disintegrating process would go on, till no considerable body of men would acknowledge any common head; so that, at no distant day, communities would be broken up into numberless clans, each hostile to the other, and all dwarfed in their means, aims and ideas by the petty and personal objects which would necessarily engross attention. All such tendencies, so universal at the South, are abhorrent to the truly national sentiment of the North, and must, if need be, be curbed by a strong hand. As our armies progress, consequently State Stocks rise, while those of the Confederate Government fall. We have only to capture Richmond and a few other important places to render the latter utterly worthless.

The whole contest is one for the maintenance of property under the guise of the maintenance of law. As we have natural resources vastly greater than those of any other people, and as property in the Northern States is much more equally distributed than anywhere else, society there must rest on foundations more stable than in any other country. Civilized society rests upon no other basis. Property is the true conservative, and that community, consequently, is the least exposed to change where property exists in the greatest measure, and is the most equally shared. We can have no violent and radical changes at the North; because these are believed to be injurious to all and beneficial to none. Change there is rapid only as it results from growth. No man at the North can see any way by which his condition would be bettered by any important alteration of the social structure. This section is now an unit in feeling and ideas, because it is an unit in interest. Society at the South, notwithstanding its assumed conservatism, rests upon a volcano, because one-half of the people would gladly witness its complete subversion. Some European nations are obnoxious to a similar charge. There are in all numerous classes rendered discontented by a belief that their humiliation is caused by unjust laws and institutions. But where the people are almost universally well to do, as in this country, and where universal equality exists, every member forms a portion of the base of the pyramid of society, which cannot be overturned without overturning and destroying all.

We have only to look at the public debts of this country in the light stated, which is the true one, to see that they really exceed in the excellence of their security those of any other nation, or certainly those of any other community that does not rest upon an equally immutable basis. With us every expenditure is identified with the preservation of what is dearest to man—his property and the order and ideas to which he has been trained. The debt will soon add another 'tie to bind still closer the governmept and the people. Being issued in sums of five dollars and upwards, it will soon be distributed as widely as property itself, so that nearly every voter, which with us, means every citizen, will see in the maintenance of the government the preservation of the means upon which he depends, in part or whole, for support. These securities will be regarded all the more valuable from provisions that are certain to be made for their ultimate payment, in accordance with the universal practice of the States, as well as the nation. The public debts of all have, almost without exception, been treated as commercial transactions, to be paid off at an early day. We shall, in the present instance be true to precedent and tradition. Government has reserved to itself the right to pay off all the debts contracted, or authorized to be contracted within a period of five years, with the exception of some $70,000,000 of 20 years bonds. The object of this was two-fold—not to burden itself with a debt running through a long course of years; or, in case it became necessary to borrow on long time, to wait till the credit of government was fully restored, when it would be enabled to make loans at the rates of interest which, for nearly twenty years past, its securities have yielded the purchaser, and which have not exceeded four and one half per cent. Such, we are confident it will be enabled to do, even before its 7 3-10 per cents. fall due. We are to have no more long bonds, bearing a high rate of interest unless sold at par. With the progress of our arms those issued of this class must advance to the figures the six per cents. so long held, and serve as standards of price for other securities. The small amount issued, and the certainty that no more will be issued yielding so high a rate of interest, are important elements in the value of those outstanding, and must cause their steady, if not rapid appreciation.

Another important element in the value of the public securities is the rapid progress of the country in population and wealth. The ratio of increase of the former from 1850 to 1860, was 36.5 per cent.; the total increase being 8,300,000. The ratio of increase of the value of property of the country was considerably more than 100 per cent.; the aggregate for 1850 being $7,066,562,966; for 1860 $16,102,524,116. There will be a slight check to the progress of population, though not a permanent one. In the Northern States the conditions are favorable to a rapid increase—abundant food, remunerative prices for labor, and cheap fertile lands, were never more perfect and complete. Their wealth will probably increase faster in the next ten, than it has in the last ten years. The agencies to which the marvellous increase for the last ten are due—steam as applied to production and locomotion—have only just begun to be put in motion, to convert our natural wealth into forms fitting for use. In the North the demon of discord has not shown its head, and industry pursues its objects with the same confidence and success that it did before secession was dreamed of. The strength that the North has displayed showed that secession took off only a very small fraction of that of the whole country. But the burdens that we can bear to day, will become light to-morrow, enabling us, as on two former occasions to commence, after a brief pause, the rapid retirement of our liabilities. At the close of the war it is not probable that we shall have a larger debt, in ratio to our population, than we had at the formation of our government, while the means of our people compared with their numbers are certainly five-fold greater, and are increasing in a vastly greater ratio.

Milwaukee and Prairie du Chien Railroad.

The Legislature of Wisconsin has repealed the seventh section of the act reorganizing the Road, which gives new value to the common stock. Under that section, all surplus earnings above interest must be used in buying preferred stock, until the whole amount of common and preferred stock is reduced to six millions. Now, all the income, after interest, expenses, and dividend on the preferred stock can be divided on the common stock. The Governor is stated to have signed the repealing act, and vetoed the act previously passed, requiring a portion of the earnings to be devoted to paying off the farm mortages.

The earnings of this Road in 1861 were	$1,108,333 78
Expenses, ordinary & extraordin'ry	672,314 87
Net income	$436,019 41

The Bonded debt is ... $2,526,000
First Preferred Stock .. 1,068,800
Second Preferred Stock 1,020,000—$4,606,800 000
The amount of common stock is $2,761,000.

Triumph of Mechanical Skill.

An English paper states that a railway carriage was built complete, filled with goods for the forthcoming Exhibition, and conveyed from Manchester to London—all in the course of twenty-four hours. The experiment was made at the works of Mr. Ashbury, Manchester, several scientific men being present to witness the operations. At 7 o'clock, a.m., the iron to be used was in the pig and the timber in logs. In 43 minutes the latter was cut. The planing, mortising, &c. was finished a few minutes after 10, when the smiths began. Their work ended at 2.45 p.m. At one o'clock the wrought iron work, such as axles, tires, &c. was done, and at 6.16 this had left the planing shop finished. The car was completed at 6.35 p.m., and half an hour subsequently it started for the great Metropolis, with a load of articles for the Exhibition. The whole work was accomplished without interfering in any degree with the ordinary operations of the establishment. This is, we suppose, the most hasty piece of such workmanship ever heard of, and might well entitle the vehicle to be named the Car of Progress.

Madison and Indianapolis Railroad.

The Madison and Indianapolis Railroad was sold on the 27th ult. by the United States Marshal for $325,000. On the 28th ult. the purchasers organized a new company, styled the Indianapolis and Madison Railroad Company.

Annexed is a list of the directors under the new organization: Frederick H. Smith, John Ferguson, Peter McMartin, Edmond H. Miller, E. Cauldwell, Elihu Day, Nathan Powell, W. M. Dunn, and Jacob B. McChesney. The Board was organized by the appointment of F. H. Smith, President; and T. Pollock, Secretary. T. P. Mathews was appointed Treasurer, and D. C. Branham, Superintendent.

Delaware, Lackawanna and Western R. R.

From the annual report of this company for the fiscal year ending December 31, 1861, we learn that the revenue derived from the several branches of the transportation department was as follows:

From transportation of coal	$1,770,124 29
" " merchandize	253,027 85
" " exp. freight.	8,621 32
" " mails	10,217 75
" " passengers	101,099 18
" storage, rents, telegraph, etc.	1,250 06
" use of locomotives	13,758 09
" " cars	11,847 46
Total	$2,169,946 00
Cost of operating the road, repairs of track, equipments, buildings, etc., including all extraordinary expenditures for renewals	830,266 22
Profit	$1,339,679 78
The profits for 1860 were	1,316,688 60
Increase	$22,991 18

The number of tons of coal on hand December 31, 1861, was 67,456 15

Mined by the company from lands owned and leased by them	572,015 13
Purchased from other parties	532,303 06
Net tons	1,171,775 14
Of which there were sold and delivered	1,042,109 14
Leaving on hand Dec. 31, 1861	129,666 00

The quantity sent to market in 1861, was 24,091 09 net tons in excess of 1860; and the stock on hand December 31, 1861, is 62,210 net tons more than the previous year.

The value of coal on hand December 31, 1861, was $211,214 85

Paid for mining, purchase and transportation of coal, and all other expenses of coal department in 1861.	3,591,836 11
	$3,803,050 96
Received for coal sold, rents, etc.	$3,196,114 23
Value of coal on hand, Dec. 31, 1861	346,337 88
	3,542,452 11
Loss	$260,598 85

No allowance is made for the coal mined from the lands owned by the company; and the freight is calculated at two cents per *gross* ton on the Southern division, two cents per *net* ton on the Northern division, what is actually paid on connecting roads, and a charge on the latter for use of cars.

INCOME ACCOUNT.

Balance December 31, 1860	$275,325 39
Reversion of interest by forfeiture of scrip stock	16,458 00
Profit in transportation department.	1,339,679 78
Interest on Warren R. R. stock.	4,728 50
Sundry other items of income	4,668 00
	$1,640,859 67
Interest on bonds	$343,550 79
" Warren R. R. stock	86,177 88
" " " bonds	42,000 00
Rent of Cayuga & Susquehanna R.R.	54,600 00
Loss in coal department	260,598 85
Insurance taxes, etc.	38,072 39
Balance of general interest account	22,208 77
One years's interest at six per cent. on capital stock, paid July 10, 1861, in Warren R. R. stock	317,592 00
Balance December 31, 1861	476,058 99
	$1,640,859 67

The total amount of capital stock outstanding is 105,895 shares; of which, 105,864 shares are paid in full, and 31 shares are partly paid. The 1,812 shares of scrip stock remaining unsettled, have been forfeited. The interest to have been endorsed on the forfeited stock has, therefore, re-reverted to the income account of the company.

The expenditures on construction account during the year (exclusive of Warren Railroad) amounted to $27,515 01, of which $18,900 was for two new locomotives.

The equipment consists of 74 locomotives; 20 passenger, 7 baggage and express, 379 freight, 4,010 coal, and 24 wreck, caboose and derrick cars.

The expenditures on the Warren Railroad during the year amounted to	$137,162 94
Previously expended	1,703,548 60
	$1,840,711 54

Moneys expended on this road are refunded in the stock of the company at par. The chief engineer confidently expects that the tunnel will be open for the passage of trains during the month of May next.

The vessel property has been increased by the purchase of one barge, at a cost of $4,150. This property now consists of 19 barges and 1 schooner.

The renewal fund has been increased by the sum of $78,498 42.

Of the Eastern Extension 1st mortgage bonds, of 1875, $117,000 have been retired, and the mortgage satisfied to that amount by entry on the records. The interest accruing on that sum will continued to be paid to the trustees for the benefit of the fund.

The condition of the railroad, coal works and other property of the company, is as good as at any previous time; and the cost of all repairs and renewals, both ordinary and extraordinary, necessary to keep them in such excellent order, is as usual included in the current expenses.

BALANCE SHEET, DECEMBER 31, 1861.

Cost of Railroad and Equipment		$9,173,466 42
" Coal Lands & Improvements		453,958 19
" Barges and schooner		64,106 42
" House and lot in Oswego, (taken for debt)		1,400 00
Cash on hand		69,912 81
Bills receivable		137,072 48
Accounts receivable		321,012 53
Coal on hand		346,337 88
Materials on hand		474,852 30
Advanced for new openings not yet available		54,353 00
Renewal fund assets, (cost)		416,650 00
Reserved fund assets, (cost)		156,778 06
Trustees of sinking fund of 1875		102,542 58
Suspense account (notes and claims past due		8,508 02
		$11,780,945 69
Capital stock paid in		$5,293,552 50
Mortgage bonds, (including all bonds retired in the several funds, upon which interest is paid)		4,915,500 00
Income bonds, (including certificates unredeemed)		14,101 57
Fractional certificates of Warren R. R. stock		1,249 23
Renewal funds		335,904 29
Bills payable		409,584 58
Accounts payable		334,994 53
Income account		476,058 99
		$11,780,945 69

The officers and directors for 1862 are:—

President—CHRISTOPHER R. ROBERT.

Vice-President—DRAKE MILLS.

Managers—Drake Mills, John J. Phelps, Wm. E. Dodge, Moses Taylor, George Bulkley, John I. Blair, Henry Young, Charles H. Marshall, Samuel L. Mitchill, Rufus R. Graves, Lowell Holbrook, Simeon B. Chittenden, Samuel Wetmore, David Thompson.

Superintendent—JOHN BRISBIN.

Treasurer and Secretary—ANDREW J. ODELL.

Railroads of the State of New York.

REPORT OF STATE ENGINEER.

OFFICE OF THE STATE ENGINEER & SURVEYOR,
ALBANY, February 18, 1862.

To the Hon. the Legislature of the State of New York:

In compliance with section 103, chapter 140, Laws of 1850, I respectfully submit the Annual Report on Railroads, for the year ending September 30, 1861, as prepared by my Deputy, George R. Perkins, as follows:

REPORT.

During the year, sixteen companies have been organized and their articles of association have been filed as required by law, in the office of the Secretary of State. They are as follows:

Albany Railroad Company.—Articles of association filed March 2, 1861.

Brooklyn City and Ridgewood Railroad Company.—Articles of association filed February 1, 1861.

Buffalo Branch of the Erie Railroad Company.—Articles of association filed June 13, 1861. On the twenty-first of March, 1861, that portion of the Buffalo and New York City Railroad lying between Attica and Hornellsville was sold under foreclosure of mortgage and a new company formed under the above name.

Coney Island and Brooklyn Railroad Company.—Articles of association filed December 10, 1860.

East New York and Jamaica Railroad Company.—Articles of association filed November 22, 1860.

East and North River Railroad Company.—Articles of association filed April 2, 1861.

Erie Railway Company.—Articles of association filed June 15, 1861. Pursuant to chap. 160, Laws of 1860, and chap. 119, Laws of 1861, the New York and Erie Railroad was sold under foreclosure of mortgage, and a new corporation formed under the above name.

Hudson and West Shore Railroad Company.—Articles of association filed October 3, 1860.

International Railroad Company.—Articles of association filed February 16, 1861.

New York Railroad Company.—Articles of association filed Dec. 24, 1860.

New York and Lake Mahopac Railroad Company.—Articles of association filed January 11, 1861.

Port Morris and Westchester Railroad Company.—Articles of association filed April 2, 1861.

Rome, Watertown and Ogdensburgh Railroad Company.—Pursuant to chap. 273, Laws of 1860, the Watertown and Rome Railroad Company purchased the Potsdam and Watertown Railroad and annexed it to, and consolidated it with its road, and changed the corporate name to the above. Certificate of the change of corporate name, &c., filed in the office of the State Engineer and Surveyor, July 10, 1861. The road is to be extended to the St. Lawrence River at Ogdensburgh.

Third Avenue and Fordham Railroad Company.—Articles of association filed April 2, 1861.

Utica and Black River Railroad Company.—Articles of association filed May 22, 1861. Pursuant to chap. 134, Laws of 1860, the Black River and Utica Railroad was sold under foreclosure of mortgage, and a new corporation formed under the above name.

Van Brunt Street and Erie Basin Railroad Company.—Articles of association filed February 15, 1861.

List of companies organized under the general railroad act which are exempt from making annual reports by special Legislative enactments.

Buffalo Street Railroad Company, by sec. 6, chap. 145, Laws of 1860.

Central City Railroad Company (Syracuse), by sec. 6, chap. 483 Laws of 1859.

Grand Street and Newtown Railroad Company (Brooklyn), by sec. 5. chap. 462 Laws of 1860.

Hicksville and Cold Spring Branch Railroad Company, by sec. 2, chap. 306, Laws of 1851.

Main and Ohio Street Railroad Company (Buffalo,) by sec. 6, chap. 145, Laws of 1860.

Niagara Street Railroad Company (Buffalo,) by sec. 1, chap. 145, Laws of 1860.

Troy and Lansingburgh Railroad Company, by chap. 295, Laws of 1861.

List of roads in operation using horse-power, that are obliged by law, to make annual reports to this Department.

Broadway Railroad of Brooklyn; Brooklyn Central and Jamaica; Brooklyn City; Eighth Avenue; New York and Harlem, (the portion within the city of New York); Ninth Avenue; Second Avenue; Sixth Avenue; Third Avenue.

List of companies organised which contemplate the use of horse-power, so far as ascertained:

Albany; Brooklyn City and Newtown; Brooklyn City and Ridgewood; Buffalo Street, (Buffalo); Central Park North and East river; Coney Island and Brooklyn; East and North river; East New York and Jamaica; Grand Street (Brooklyn); Grand Street and Maspeth (Brooklyn); Grand Street and Newtown; Hudson and West Shore; International; Main and Ohio Street (Buffalo); New York; New York and Lake Mahopac; New York Westchester; New York and Yonkers; Niagara Street (Buffalo); Port Morris and Westchester; Tenth Avenue and Grand Street Ferry (New York); Third Avenue and Fordham; Troy and Lansingburgh; Union R. R. of Westchester county; Van Brunt Street and Erie Basin; Westchester county and New York city.

From the tables accompanying this report, I have deduced the following results;

ABSTRACT OF THE REPORTS OF THE RAILROAD CORPORATIONS FOR THE YEAR ENDING SEPTEMBER 30, 1861.

TABLE A.—*Stocks and Debts.*

Amount of capital stock per charter and acts of the Legislature.	$97,973,200 00
Amount of capital stock subscribed for	84,655,039 12
Amount of capital stock paid in per last report	76,352,939 92
Amount of capital stock now paid in	82,445,253 51
Amount of funded debt as by last report	72,842,828 98
Amount now of funded debt	74,451,614 02
Amount of floating debt as by last report	2,112,152 44
Amount now of floating debt	2,082,030 91
Total amount now of funded and floating debt	79,533,544 93

TABLE B.—*Cost of Construction and Equipment.*

For graduation and masonry	$54,303,701 92
For bridges	2,192,671 18
For superstructure, including iron	29,407,057 62
For passenger and freight stations, buildings and fixtures	5,320,625 52
For engine & car houses, machine shops, machinery and fixtures	2,741,814 40
For land, land damages and fences	9,810,498 78
For locomotives and fixtures, and snow plows	7,381,489 06
For passenger and baggage cars	3,017,030 59
For freight and other cars	5,563,974 19
For engineering and agencies	12,816,022 60
Total cost of construction & equipment	138,966,753 82
Total cost of same, excluding city roads	130,786,818 06

TABLE C.—*Characteristics.*

Length of roads in miles	3,475.99
Length of roads laid	2,727.64
Length of roads in operation, excluding city roads	2,654.12
Length of double track, including sidings	841.77
Length of branches laid	465.32
Length of double track on same	22.87
Length of equivalent single track, exclusive of city roads	3,984.03
Number of engine houses and shops	185
Number of engines	755
Number of first class passenger cars	1,223
Number of first class passengers cars, excluding city roads	709
Number of second class and emigrant cars	223
Number of second class cars, excluding city roads	158
Number of baggage, mail and express cars	244
Number of freight cars	9,592

TABLE D.—*Business of the Year.*

Passenger Transportation:		
Miles run by passenger trains	17,241,021	
The same, excluding city roads	6,058,126	
Number of passengers of all classes carried in cars	58,128,679	
The same, excluding city roads	8,684,189	
Number of miles traveled by passengers or number of passengers carried one mile, city roads not included	337,954,686	
Freight Transportation:		
Miles run by freight trains	7,973,800	
Number of tons carried in freight trains	5,460,409	
Total movement of freight, or number of tons carried one mile	660,558,865	
Classification of Freight:		Tons.
Products of the forest		540,079
Products of animals		1,067,070
Vegetable food		1,220,332
Other agricultural products		221,209
Manufactures		568,691
Merchandize		719,017
Other articles		1,138,691
Total tonnage		5,460,409

Excluding City Roads:	Miles.
Average rate of speed of ordinary passenger trains, including stops	20.26
Average rate of same when in motion	24.89
Average rate of speed of express passenger trains, including stops	27.50
Average rate of same when in motion	31.87
Average rate of speed of freight trains, including stops	11.29
Average rate of same when in motion	14.42
	Tons.
Average weight, in tons, of passenger trains, exclusive of passengers and baggage	63.78
Average weight, in tons, of freight trains, exclusive of freight	127.16

TABLE E.—*Cost of Maintenance of Roadway.*

Allotted to Passenger Transportation:		
Repairs of road-bed and way, exclusive of iron	$950.624 24	
Cost of iron for repairs	397.347 72	
Repairs of buildings	125,876 29	
Repairs of fences and gates	28,268 50	
Taxes on real estate	147,014 19	
	$1,649,130 94	
Allotted to Freight Transportation:		
Repairs of road-bed and way, exclusive of iron	$1,373,095 40	
Cost of iron for repairs	607,949 65	
Repairs of buildings	190,141 06	
Repairs of fences and gates	43 526 26	
Taxes on real estate	211,749 40	
	$2,426,461 86	
Allotted to passenger transportation	$1,649.130 94	
Allotted to freight transportation	2,426.461 86	
Other costs not allotted	432,795 11	
Total cost of maintenance of roadw'y	$4,508 387 91	
Total cost, excluding city roads	$4,374,217 54	

TABLE F.—*Cost of Repairs of Machinery.*

Repairs of engines	$445,689 80	
Repairs of cars	454,873 10	
Repairs of tools, &c	39,252 37	
Incidental expenses, oil, fuel, &c	47.610 50	
	$987,425 77	
Allotted to freight Transportation:		
Repairs of engines	$659,032 91	
Repairs of cars	848,533 78	
Repairs of tools, &c	51,722 27	
Incidental expenses, oil, fuel, &c	67,908 84	
	$1,627,197 75	
Allotted to passenger transportation	$987,425 77	
Allotted to freight transportation	1,627,197 75	
Other costs not allotted	68,709 04	
Total cost of repairs of machinery	$2,683,332 56	
Total cost, excluding city roads	$2,624,586 35	

TABLE G.—*Cost of Operating the Roads.*

Allotted to Passenger Transportation:	
Office expenses, stationery	$62,676 22
Agents and clerks	321,208 23
Labor, loading & unloading freight	11,731 64
Attendance of Porters, watchmen and switchmen	192,003 76
Wood and water station attendance	33,757 98
Conductors, baggagemen & brakemen	286,559 80
Enginemen and firemen	266,112 41
Fuel, and cost of labor in preparing for use	721,536 37
Oil and waste for engines & tenders	84,276 22
Oil and waste for cars	15,137 88
Loss & damage of goods & baggage	2,170 51
Damages for injuries to persons	49,104 08
Damages for property and for cattle killed	14 007 49
General superintendence	85,001 68
Contingencies	865,745 23
	$2,511,023 50

Allotted to Freight Transportation:	
Office expenses, stationery, &c....	$49,004 59
Agents and clerks.....	448,182 48
Labor, loading & unloading freight	634,140 14
Attendance of porters, watchmen and switchmen.....	257,095 59
Wood and water station attendance	45,734 41
Conductors, baggagemen & brakemen	356,026 01
Enginemen and firemen	401,581 03
Fuel, and cost of labor in preparing for use.....	996,741 20
Oil and waste for engnes & tenders	127,848 66
Oil and waste for cars.....	45,528 55
Loss & damage of goods & baggage	66,344 97
Damages for injuries to persons ...	13,633 78
Damages for property and cattle killed.....	24,513 03
General superintendence	106,810 69
Contingencies.....	327,001 99
	$3,900,188 02
Allotted to passenger transportation	$2,511,022 50
Allotted to freight transportation .	3,900,188 02
Other costs not allotted.....	1,461,277 06
Total costs of operating roads....	$7,872,488 58
Total cost, excluding city roads..	$6,467,918 89

TABLE H.—*Earnings and Payments.*

Earnings:	
From passenger business.....	$9,533,934 82
The same, excluding city roads..	7,264,160 57
From freight business, city roads excluded.....	13,009,783 99
From other sources	991,750 60
The same, excluding city roads ..	937,398 16
Total earnings.....	$23,535,469 41
The same, excluding city roads..	$21,211,242 72
Payments other than for Construction:	
For transportation expenses.....	$15,575,532 87
The same, excluding city roads..	13,766,066 09
For interest	4,892,121 03
The same, excluding city roads..	4,811,141 79
For dividends on stock	2,413,929 00
The same, excluding city roads..	1,974,618 00
Amount carried to surplus fund .	73,042 80

TABLE I.—*Accidents.*

Number of passengers killed.....	12
Number of passengers killed, excluding city roads.....	7
Number of passengers injured	34
Number of passengers injured, excluding city roads.....	20
Number of employees killed.....	59
Number of employees injured	23
Number of others killed.....	91
Number of others injured.....	60
Total number killed.....	162
Total number injured.....	117
Total number killed, excluding city roads...	147
Total number injured, excluding city roads ..	83

Deductions from the foregoing Results.

If we exclude the city roads we have as follows:

Average cost per mile of road	$49,276 90
Average cost per mile of single track	32,827 85
Average number of miles traveled by each passenger.....	38.91
Average number of passengers in each train.....	55.78
Average number of miles each ton of freight was transported	120.97
Average number of tons in each freight train	82.84
Aggregate movement of passenger trains is equivalent to passing over the road	1,942 times.
Aggregate movement of freight trains is equivalent to passing over the road	2,556 times.
Average number of trains passing daily, over the road, about.....	12½ times.
Average cost per mile of road for maintaining roadway	$1,648 08
Average cost per mile of road for repairs of machinery	988 87
Average cost per mile of road for operating road	2,436 93
Average cost per mile of single track for maintaining roadway	1,097 92
Average cost per mile of single track for repairs of machinery	658 76
Average cost per mile of single track for operating road.....	1,623 44
Average sum received for carrying one passenger one mile.....	2.14 cents.
Average sum received for transporting one ton of freight one mile....	1.96 cent.
Average number of miles of travel for each passenger killed.....	48,279,240
Average number of miles of travel for each passenger either killed or injured	12,516,840
Average number of passengers carried for each one killed	1,240,598
Average amount of dead weight moved for each passenger carried .	1.14 tons.
Average number of dead weight moved for each ton of freight transported	1.53 tons.

Average expense is 64.87 per cent. of all the earnings.

There will be found among the documents accompanying this report, in addition to those usually given, an alphabetical list of all the railroad corporations in the State, now existing, as well as of those which ever have had an existence, under each of which, reference is made to all essential legislative enactments, etc., connected with the same.

Also, an abstract of titles, etc., of such general laws as relate to railroad corporations, is given. These documents will serve as an index to all the laws relating to railroads.

For several years past the Legislature have passed many acts authorizing the formation of railroad corporation, and have not required such corporations to comply with the General Railroad Act of 1850 in regard to making annual reports to this Department.

This is specially the case in regard to such roads as are operated in our larger cities by horse-power. Many of these companies are not even required to file Articles of Association with the Secretary of State.

Were all the railroad corporations brought under the same general and uniform rules, in regard to making annual reports, as was provided for by the general act of 1850, our annual reports tabulations, and deductions would be much more satisfactory than we are now able to make them.

At the time of the passage of the General Railroad Act of 1850, it was not foreseen that city railroads would be to any great extent introduced, and no special provisions were made in reference to this class of roads. The passenger business of the city railroads, operated by horse-power, is now very large, compared with the interior roads of long transit, operated by steam power. The whole number of passengers carried on the city roads during the past year is 49,444,490, while upon the other roads only 8,684,189 have been carried; and the amount received from passenger business on the city roads is $2,269,774 25, while the amount from the other roads is $7,264,160 57. Since 1850 great and important changes have been made in the management of railroads; and there are now many conditions and circumstances connected with the business operations of our railroads which cannot be brought out under the present form of reporting. For instance, we are unable to distinguish the way freight from that which passes over the entire length of the road; neither can we determine whether the movement is to or from tide water. We have no separate account of the live stock which is transported, no special account of the milk business, and there are many other particulars which it is important to have given in detail which cannot now be reached.

I would, therefore, suggest, that the General Railroad Act of 1850 be revised, especially that portion which relates to the form of the annual report to be made to this department, and that a special form be adopted for city roads.

Respectfully submitted,

VAN R. RICHMOND.

DOCUMENTS

Accompanying the Annual Report on Railroads.

1. Reports of the different railroad companies, for the year ending September 30, 1861, from No. 1 to No. 64 inclusive.

2. Tabulated results compiled from the reports of the respective companies, comprised in tables, A, B, C, D, E, F, G, H and I.

3. Tables of comparative statements, for five consecutive years, 1857, 1858, 1859, 1860, 1861, of the most important statistics, as reported by the respective companies.

4. An alphabetical list of all the railroad corporations now existing, as well as of those which ever had an existence, under each of which reference is made to all essential legislative enactments, etc., connected with the same.

5. An abstract of titles, etc., of such general laws as relate to railroad corporations.

6. Comptroller's apportionment of expenses charged to railroad companies, for the year ending September 30, 1861.

7. A map of the State, 22 inches by 29 inches, on which is given the position of all the railroads of the State.

Delaware and Hudson Canal Company.

The business of this Company for the year ending March 1, 1862, was as follows:

Sales of coal to March 1, 1862		$2,406,514 37
Canal and Railroad tolls collected.		367,953 56
Profits of barges, etc		31,215 45
Coal on hand at Honesdale, Rondout, and New York, and on line of canal.....		354,446 00
		$3,160,129 38
Coal on hand March 1, 1861.....	$248,821 40	
Mining coal	681,614 64	
Railroad transportation and repairs.....	292,265 14	
Canal repairs & superintendence.....	259,029 70	
Freight of coal on canal	544,278 56	
Labor and expense at Rondout.....	58,461 22	
Rent, salaries, current expenses, etc., New York office.....	34,084 99	
Coal yard and harbor expenses, taxes, interest, etc.....	313,722 58	
Depreciation account .	86,268 54	
		2,468,045 85
Net profit.....		$692,083 53

—being a little over 9 per cent. on the capital stock of the Company.

The canal was opened for navigation on the 23d day of April, and closed on the 3d of December, During the season, navigation was interrupted by freshets seven days, and by breaks six days. On the 13th February, 1861, an extraordinary ice flood occurred in the streams adjacent to the canal, causing—in addition to other slighter injuries—a breach in the dam of the Smith Hill reservoir, near Honesdale; the damage thus occasioned—about $25,000—has been included in the ordinary canal expenditures for the year 1861.

The total quantity of coal shipped from Honesdale by the canal was 724,160 15-20 tons; for all of which a ready market has been found, at full current prices. This fact furnishes a strong and satisfactory indication that the Lackawana coal is still steadily gaining favor with the public.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bon is fall due at different periods

American Railroad Journal.

Saturday, April 12, 1862.

Share and Money Market.

After a good deal of activity the first part of the week, the market closed dull at a very slight decline. The recent advance has led to realizations, which have brought out large quantities of stock. The threatened appearance of the Merrimac at Hampton Roads, tends very strongly to check operations, till her defeat or capture shall be made certain. We cannot say that much real apprehension is felt as to the result, but the mere contingency of her success is enough to check operations, and depress prices. In all other respects matters are favorable. The triumph of the government forces is far greater than was anticipated. In money, there is a steadily increasing ease. In fact there is every reason to fear that money may become too abundant, relieved as our Banks are from the wholesome check of paying specie. Exchange is quoted at 112 to 113. Gold is a trifle weaker, selling at 101¾ to 101⅞.

Interest and Dividends.

The Cumberland Valley Railroad Company have declared a semi-annual dividend of four per cent., payable on demand, at the office of Thomas Biddle & Co., Philadelphia. The coupons due on the 1st inst. are also paid at the same place.

A dividend of 75 cents per share upon the stock of the Long Island Railroad Company will be paid at the office of M. Morgan & Son, 37 William-st., New York, on the 21st inst.

☞ A meeting of the stockholders of the Chicago, Burlington and Quincy Road is to be held at Boston on the 15th May, to consider the propriety of extending that road from Aurora into Chicago, and to authorize the issue of a million of bonds for that purpose.

☞ We understand the suit of Bates vs. The Illinois Central Railroad Company, to recover possession of depot grounds in Chicago, has been finally decided, on appeal, by the Supreme Court at Washington, in favor of the Company.

Boyd's Patent Hose.

The attention of Railroad Managers and others in want of *hose*, is called to the advertisement of Mr. G. Wheelwright, agent for Boyd's Patent Hose in this city. The article is made of heavy, closely woven, four and five ply cotton twine, the inner surface being coated with Gutta-percha, the edges of which are perfectly true and riveted together strongly with copper rivets. By these means an article is obtained which combines the utmost strength with lightness, flexibility, cheapness and freedom from mill dew. By virtue of positive tests, it has been ascertained to be stronger than any other hose ever manufactured, while it is one-third lighter than leather, and can be spliced or repaired with ease, which is not the ease with some other articles of the sort. Its cost is less than the best quality of leather hose. We have before us several testimonials, all of which speak of Boyd's Patent Hose in the highest terms. One fact, vouched for by Mr. J. T. P. Hunt, Chief Engineer of the Fire Department, Manchester, N. H., will be worth a dozen opinions. He says: "The trial on the second day we consider to have been still more marked, when the same length of this hose was used by our steam fire engines, running it to the extreme pressure of 220 lbs. to the square inch"—without breaking. It is now used on most of the steam fire engines in this city, with entire success.

Locomotives and Steam Engines for Sale.

There are now on hand and for sale at the *Jersey City Locomotive Works*, two first class new Locomotives—one wood-burner, and one coal-burner—constructed with the latest improvements and of the best material and workmanship. These works furnish Low Moor Tires, and Portable and Stationary Steam Engines, of all sizes. We understand that these works are rapidly filling with orders, and are busy in building Locomotives, Propellers and Stationary Engines; also a large coal-burner for the N. J. R. R. and Transportation Co. See Advertisements of Wm. G. Hamilton, Esq., Vice President and Engineer, in another column.

Cattawissa Railroad Company.

The annual meeting of the stockholders was held in Philadelphia on the 1st inst., at which the report of the directors for the fiscal year ending December 31, 1861, was presented and read. From this we learn that the gross receipts were $279,075 86. Deducting rent of four other roads, they amounted to $219,548 37. The expenses of all kinds, covering ordinary and extraordinary expenses, were $197,058 04—leaving as net earnings, $22,490 33. These were disposed of as follows: Paid on charter bonds $3,650; discount and interest $163 26; advertising, etc., $756 24; sundry claims against old company $3,112 07; balance Receiving Com., Trustees Com., etc., $11,475; C. W. & E. R. R. labor and material debt, $1,080 39; uncollected duty December 31, 1861, $2,253 37. The total expenditures for repairs during the year amounted to $91,114 80. One new bridge has been built, 11 miles of new cross ties placed in the road, 190 tons of new rails, and a corresponding amount of other materials. The repairs of locomotives amounted to $27,093 62, and the repairs of cars to $28,472 50.

The amount of cash payments made by this company since its organization for and on account

of the old company have been $28,613 23; debts of old company negotiated away $9,112 15—making a total reduction of the old company's debts of $37,725 38. There is yet due for labor, material, etc., $65,246 91. On its own account the company does not owe a dollar.

The decrease of gross receipts for 1861, compared with the average of the past three years, is 14.4 per cent.; and the decrease in expenses, 8.9 per cent. This result is considered very favorable under all the circumstances.

The road had no share whatever, owing to its geographical position, in the business furnished by government, yet its earnings have much exceeded expectation, and large expenditures have been made in improving the road.

Finances of St. Louis.

From the Comptroller's Report, we learn that the receipts of the City of St. Louis, for the year ending February 28, 1862, amounted to $1,108 693, or, including balances on hand, $1,136,187, of which $156,202 were derived from temporary loans and $137,022 from city warrants issued. The expenditures were $678,008 for new, and $228,692 for old claims, making an aggregate of $906,700, and leaving a balance of $254,533 at the end of the fiscal year. The larger part of this consisted of depreciated Missouri currency. The sum of $20,095 is comprised in it for exchange paid to the Union Bank for converting its issues, and which the municipal authorities are asked to legalize as a regular asset.

During the year the floating debt has been increased to the extent of $56,911 of new charges; while the sum of $228,692 of *entailed* floating debt has been paid off in the same period. The total amount of this now due is $193,380.

The exposed situation of St. Louis last summer operated seriously on its finances during most of the year. No new contracts on streets or other city work, other than necessary repairs, have been issued since April last; and a reduction of $50,000 per month has been made in municipal expenditures. Notwithstanding which, the city was unable to pay its interest claims as they fell due last August. At the commencement of the year the floating debt, estimated by the late Comptroller at $100,000, amounted to $365,000, in round numbers, embarrassing every branch of the city government, and preventing the negotiation of loans during the crises which took place. Property of all kinds naturally depreciated, and capitalists feared to part with their money, not foreseeing the issue of the war. At the same time taxes of all kinds were difficult to collect, caused by the general suspension of trade. In ordinary years it would have been arderous to meet such a load of obligations as they fell due. Every effort to main tain the credit of the city appears to have been made; but the task was clearly impossible. Of the bonded debt $120,000 fell due during the year; the interest claims, increased by the rate of exchange, was $360,000; the monthly expenditures at first averaged $90,000. It will be seen that the last alone almost equalled the average receipts of the city treasury, from all sources.

Three resources, observes the Comptroller, were open—to effect a loan, to make an issue of Treasury Warrants, and to cut down expenditures. But the first two were only of limited application. Strennous efforts were made to raise money by both methods; but by the 10th of June both resources had been exhausted at home, and there was no disposition abroad to render assistance. At the 1st of August, after expending $69,000 on interest and exchange, $125,000 more was required, to get through the month. In its then exhausted condition the Treasury was driven to suspend payment of interest. Since then none has been paid, except on small sums to settle up an account in Philadelphia. The Mayor and Common Council have, however, been making every exertion to create a surplus, out of which to provide for the bonded debt. It is stated as a highly gratifying fact that among the thousands of bondholders both in Europe and this country, the only individual who has undertaken to prosecute the city for its temporary non-payment of interest, is a resident of a neighboring State, whose claim is but for $60, and it is believed that he will withdraw his suit.

Of the ability of the city to discharge in a brief period, its obligations, the Comptroller states that the total differred bond or interest payments due in the current year are $363,650, to which must be added the sum of $306,110 for interest, &c., accruing the present year. Both are $300,000 *less* than the amount expended in 1859–60, through the Engineer's office alone. It is believed that the $50,000 per month, by which the ordinary expenses have been reduced, can be applied, without serious annoyance, toward the liquidation of interest over due and falling due, thus extinguishing the whole in little more than thirteen months. It has been resolved to undertake no public works until these claims shall have been equitabiy disposed of. The ordinary revenue for the present year can hardly fall short of $800,000; and will exceed that figure, should the sluggish stream of trade move more rapidly than it has lately done.

The following statement shows the assets and liabilities of the city:

ASSETS.	
Property (estimated at $25,000,000 two years ago,) say	$10,000,000
Delinquent taxes of former years	500,000
Delinquent taxes of 1861	220,000
Bills receivable	100,946
Treasury warrants unissued	62.978
	$10,883,924

LIABILITIES.	
Bills payable, (bonded debt)	$1,913,500
Deferred payments	353,650
Floating debt	193,380
Treasury warrants	137,022
	$5,597,552

Navigation on the Upper Lakes.

We have news from Mackinaw up to the 19th of March, on which day the ice was only twelve inches thick, with prospects of an unusually early opening.

Navigation on Lake Erie is now resumed, propellers running regularly between Detroit and Buffalo and Toledo and Dunkirk.

Accounts from the Welland Canal are not quite so favorable. At Port Robinson the ice was fourteen inches thick, and at Burlington Bay loaded teams were crossing the ice as in mid-winter.

From Detroit we learn that the ice still obstructs navigation between that port and Port Huron, but it was thought the strong north-east winds which have prevailed for the past few days would open a passage yesterday. The Sea Bird had made two or three attempts and failed to get through the ice.

From Green Bay we have advices up to the 1st inst. On that date the ice near Menominee river was firm, and teams were coming up on the ice from below.—*Chicago Tribune, April 4.*

Eastern Virginia and Maryland Railroad.

The bill which recently passed the Western Virginia Legislature, at Wheeling, to incorporate the Accomac and Northampton Air-Line Railroad Company, provides for a capital of $600,000, divided into shares of $50 each. The road is to commence at Cherry Stone Ferry, in Northampton county, Va., and to run to the Maryland line in the direction of Salisbury, Somerset county. The Snow Hill (Md.) Shield says:

The Hon. John W. Crisfield, president of the Eastern Shore Railroad Company, is much in favor of a plan contemplating a junction of the Virginia railroad via Worcester and Somerset counties, with that at Salisbury, as also other individuals of influence connected with this species of improvement.—*Delaware Gazette.*

Philadelphia and Erie Railroad.

The Warren *Mail* says that the work of laying the rails from Warren eastward, on the Philadelphia and Erie Road will be commenced in June, and that the whole line is expected to be completed in time to participate in the fall trade of the present year.

Chicago and North-Western Railroad.

The earnings of the Chicago and North-Western Railway Company for the fiscal years ending March 31, 1861 and 1862, were:

	1862.	1861.	Increase.
Passengers	$308,546 19	$241,226 36	$67,319 83
Fr'ht, Mails, &c	540,530 86	480,936 97	59,593 89
Totals	$849,077 05	$722,163 33	$126,913.72

Railroad Earnings--Weekly.

The receipts of the Grand Trunk Railway of Canada for the week ending March 29, 1862, were:

14,524 passengers	$27,548 84
Mails and sundries	4,301 85
13,390 tons of freight and live stock	60,233 48
Total	$92,083 37
Corresponding week, 1861	90,563 46
Increase	$1,519 91

—Including River du Loup Traffic.

The traffic of the Great Western Railway of Canada for the week ending April 4, 1862, was as follows:

Passenger	$17,424 69
Freight and live stock	41,111 97
Mails and sundries	1,326 49
Total	$59,863 16
Corresponding week of last year	55,398 53
Increase	$4,464 63

The earnings of the Cleveland and Toledo Railroad for the 1st week in April, 1862, were. $21,224
Do., 1861 22,939
Decrease $1,715

Railroad Earnings--Monthly.

The earnings of the Toledo and Wabash Railroad for March were:

	1861.	1862.
Passengers	$18,083 90	$14,525 39
Freight	42,966 87	41,480 49
Total	$61,050 77	$56,005 88
Decrease		$5,044 89

The receipts of the New York and Harlem Railroad for March are as follows:

March, 1862	$103,020 82
" 1861	88,790 72
Increase	$14,229 60

The statement of the Illinois Central Railroad for March is as follows:

Land Department.

Acres Construction Lands sold	6,755.98	for	$82,099 45
Acres Interest Fund L'ds sold	776.07	"	8,786 77
Acres Free Lands sold	2,591.05	"	33,981 80
Total sales during the month	10,123.10	for	$124,818 02
To which add Town Lot sales			614 25
Total of all			$125,432 27
Acres land sold since Jan'y 1, 1862	21,375.02	for	$260,044 20
Acres sold prev'sly (net sales)	1,236,971.08	for	16,161,203 15
Total	1,258,346.10	for	16,421,247 35
Construction bonds canceled previous to February 28			$2,096,500 00
Cash collected in March			18,965 87
87,000 bushels corn received on hand.			
Net collections to Feb. 28, 1862			4,159,458 03

Traffic Department.

Receipts from Passengers		$72,268 34
" Freight		74,142 65
" Mails		6,358 34
" Rent of road		6,333 00
" Other sources		2,699 62
Total receipts for March, 1862		$161,801 95
Do. do. 1861		226,966 76

Original land grant, 2,595,000 acres; railway, 706 miles of main track, and 97 miles of sidings, 113 engines, 2,456 cars. Funded debt, $15,235,500.

The earnings and expenses of the Cleveland and Mahoning Railroad for January, February and March were as follows:

	1861.	1862.
Passengers	$13,363 93	$10,402 28
Miscellaneous freight	17,322 10	17,222 63
Ore	9,529 07	8,386 81
Coal	25,603 44	31,071 42
Mail	1,256 25	837 51
Gross earnings	$67,074 79	$67,930 65
Expenses	31,355 21	33,122 82
Net earnings	$35,719 58	$34,797 83

The earnings of the Galena and Chicago Railroad for March, 1862, were $76,137 59
Do., 1861 101,600 24
Decrease $25,462 65

Corrected earnings for February, $105,423 42.

The earnings of the Michigan Central Railroad for March, 1862, were $152,901 62
Do., 1861 151,670 54
Increase $1,231 08

The earnings of this year do not include the earning of the New Albany and Salem Railroad.

The earnings of the Cleveland and Toledo Railroad in March, 1862, were $99,359
Do., 1861 85,873
Increase $13,486

The earnings of the Detroit and Milwaukee Railroad from January 1st to March 29th were $136,489 48 against 102,805 15 for the corresponding period in 1861.

The earnings of the Buffalo, New York and Erie Railway, for the month of March were:

1862 $81,144 97
1861 49,194 46
Increase $31,950 51

The earnings by the Chicago, Burlington an Quincy Railroad (310 miles) in March, 1862, were $121,272 89
March, 1861 158,007 83
Decrease $36,734 94

The earnings of the Hudson River Railroad for March, 1862, were $308,963 46
Do., 1861 167,559 96
Increase $141,403 50

The earnings for six months ending March 31, 1861 and 1862 were:

	1860 1.	1861-2.
October	$193,950 63	$173,260 89
November	169,548 71	197,761 77
December	220,370 19	246,282 92
January	223,157 37	307,330 18
February	205,342 69	281,568 16
March	167,559 96	308,963 46
Totals	$1,179,929 55	$1,515,167 38
		1,179,929 55
Increase in six months		$325,287 83

The earnings of the Chicago and Rock Island Railroad for March, 1862, were $71,604
Do., 1861 75,275
Decrease $3,671

The State Loan to the Long Island Railroad.

LOANS REIMBURSABLE AT THE PLEASURE OF THE STATE, MUST HAVE THEIR DATE OF PAYMENT FIXED BY THE LEGISLATURE. THE LOAN HAVING BEEN GIVEN PRIOR TO 1846—THE LAW OF 1858 FIXING THE DATE OF PAYMENT IS CONSTITUTIONAL.

The Legislature of the State of New York in 1840 enacted that, whenever the Long Island Railroad Company should produce to the Comptroller the joint affidavits of five directors of the company, that the sum of $400,000 of the moneys paid in on the capital stock of the company, had been actually expended by them in the construction of their road, he should issue and deliver to the Treasurer of said company, special certificates of stock to the amount of $100,000, bearing an interest not exceeding six per cent., payable semi-annually. This amount was made a lien upon the road in favor of the State, and the money accruing from the sale of the certificates was to be applied to the construction of the road. The 7th section of the act was as follows: "The said stock shall be reimbursable at the pleasure of the Legislature at any time after twenty years from the date of the respective issues thereof." The certificates issued were all dated July 27th, 1841, bearing interest from Aug., 1841 reimbursable at the pleasure of the State, at any time after the 1st day of August, 1861.

By the laws of 1858, chap. 36, it is enacted as follows: The stock of the State of New York, issued to the Long Island Railroad Company, in pursuance of the provisions of chapter 193 of the laws of said State for the year 1840, is hereby made payable on the first day of August, 1876, provided any party who may hold certificates of such stock, who may desire the same made payable on the said first day of August, 1876 shall, on or before the first day of January, 1861 present such certificates to the Comptroller for indorsement, whereupon the Comptroller shall indorse on such of the said certificates the following words, namely: "The principle of this bond is payable on the first day of August, 1876, and the rate of interest thereon is to be five per cent. per annum, after the first day of August, 1861, payable semi-annually, as heretofore;" attesting the same by his signature, and stating the date of the act of the Legislature, authorizing such indorsement.

"§ 2. Such certificates as shall not be presented and indorsed, shall be payable on the first day of August, 1861, from the funds to the credit of the railroad company then held by the Comptroller, or other additional funds if necessary, to be furnished by said company."

Section 4 provides that this law shall not release the said railroad company from any liability imposed by the law of 1840, but the provisions and conditions thereof, not herein modified, shall remain in full force and effect.

On or about the 1st day of December, 1860, the Long Island Railroad Company filed with the Comptroller its consent that he should indorse such bonds as should be presented to him for that purpose, and requested the Comptroller to make the indorsement prescribed by the act of 1858. On the same day the relator, being the owner and holder of one of said bonds, No. 16, presented the same to the defendant, and demanded that he should indorse it pursuant to the act of 1858, which the defendant refused to do on the ground that said act was a nullity.

The relator then applied to the Supreme Court at Special Term, for a writ of mandamus to compel the Comptroller to indorse said stock; and after hearing the motion, the court awarded the pre-emptory writ, which was accordingly issued. The case was then carried to the General Term, where the decision of the Special Term was affirmed; the case now came up before the New York Court of Appeals, and the following opinion rendered, declaring the act of 1858 constitutional, and re-affirming the decision of the courts below.

JAMES, J.—The ground upon which the Comptroller placed his refusal to do the act required, was, that the act of March, 1858, authorizing it, was in conflict with the 9th section of article vii of the Constitution of this State, and therefore void. That section of the constitution declares that the credit of the State shall not, in any manner, be given or loaned to, or in aid of, any individual, association or corporation. The constitution was adopted in 1846, and by the 17th section of article first, it was declared that such acts of the Legislature of the State as were then in force, should be and continue the law of the State, subject to such alterations as the Legislature should make concerning the same. The operation of the constitution was therefore wholly prospective. The Comptroller's refusal rests on the assumption that the act of 1858, was a loaning of the credit of the State to the Long Island Railroad Company, and unless that assumption be correct, he is without excuse.

To determine this question, it is necessary to ascertain the duration of the loan as authorized by the act of 1840. The argument of the Attorney General is, that by the true construction of the statute, it falls due on the 1st day of August, 1861; that the words "at the pleasure of the Legislature," contained in the act, are mere surplusage, and that such has been the uniform construction given to acts containing similar provisions by the State officers. I cannot concur in that construction. In construing a statute, it is the

duty of the court, if possible, to give force and effect to every word used, if it can be done without a violation of the organic law. The words employed are to be understood according to their natural signification and import. When the words are plain and clear, and their sense distinct and perfect, there is generally no necessity to resort to any constructive means of interpretation. There is no room for construction. The words themselves declare the meaning of the instrument, and courts have no right to add to, or take away from that meaning. In this case, the words used are plain and clear: they embody a meaning precise and distinct, and that meaning cannot well be misunderstood. Taking the language of the act, and giving to every word its full force, according to its most common and popular signification, the the intention of the Legislature is plain and clear—it makes the stock reimbursable at the pleasure of the Legislature after twenty years from its issue. No other construction can be given to the act, unless a part of its words are omitted. To give it the construction contended for by the defendant, the words "at the pleasure of the Legislature at any time after," would have to be erased. I cannot think those words were inserted by the Legislature, without a purpose, and that purpose was, as hereinbefore stated, to vest in the Legislature the power to fix the time for the reimbursement of said stock, after a period of twenty years from their issue.

The conclusion of the court below, that the act of 1858 was not a loan of the credit of the State was therefore correct. The credit of the State had been previously loaned. The stock had a valid existence, its holders were the legal creditors of the State, yet they could not call for its redemption until after the expiration of twenty years from its issue; nor then until the legislature should fix a period for its payment. The statute of 1858 was enacted for that purpose, and it designated two periods when the stock might be redeemed; one present the other future, leaving the option of accepting the one or the other with the holders of the bonds, if that option was made manifest within the period limited by the act.

Of the power of the Legislature to do this. I have no doubt. The whole law-making power is vested in the Legislature, which is omnipotent, unless restricted by the express or implied provisions of the constitution. It is for those who claim that a statute is unconstitutional to show that it is forbidden. The section, which it is claimed prohibited the enactment of 1858, does not reach the case. Had this act simply declared that the bonds in question should become due in 1876, the option being with the Legislature, no one would have deemed it a loan of the credit of the State. If it were fixing any period after the lapse of twenty years from the issue of the bonds, would be equally void; and thus the option vested in the Legislature by the act of 1840, entirely defeated. Fixing two periods instead of one for the redemption of the bonds, with the conditions given to the holders, did not change the nature of the act, nor render the law for that reason unconstitutional.

It is true, that the original loan, if the holders so elect, may, under the act of 1858, continue fifteen years after the first twenty years have expired, and so it might had not the act of 1858 been passed. The option was with the Legislature, and it had the power, either by affirmative or negative acts, to allow the loan to run; and having seen fit to act affirmatively in the matter, the act is not without the limits of the constitution, nor the law invalid.

I fully agree with the learned Attorney General that "the whole scope and object of the seventh article of the constitution was to pay the public debt at the earliest practicable period, and to extricate the State from its liabilities, incurred for the benefit of Corporations," and I trust that the object will never be departed from. Although it may be that the Legislature in fixing a day so remote for the redemption of these bonds has acted unwisely, and departed from the intent of the framers of the constitution, in allowing the credit of the State to be continued for the benefit of the Corporation; still the power being vested in that body, its unwise exercise affords no ground for the courts to nullify it. In my judgment the act of 1858 was constitutional, and the Comptroller should have indorsed the bonds presented to him for that purpose, as required by the provisions of the act. The order must be affirmed, with costs.

Relation of the Political to the Financial and Commercial Condition of the Country.

The steady improvement in prices of the securities of the United States is but another name for the growing confidence in the integrity of the government. It is a case where the financial question includes the political. The same is true of interests equal in magnitude to the entire property of the nation—to its vast investments in highways; and in the works and agencies upon which all our commercial, manufacturing, and agricultural industries rest. In writing upon financial matters it has, consequently, been necessary to refer constantly to political ones—an extraordinary feature, perhaps, in a Commercial Circular, as the former only results from the latter. We think we cannot now perform a more useful service to our readers, than to state in a manner more formal than we have yet done, the relation that prices of all kinds bear to our political unity; and, consequently, the significance in the eyes of the North of the existing struggle, which now, happily, appears to be near its termination.

The question at issue is only the old struggle, as old as society itself, between the two tendencies in man—one toward centralization and progress; the other toward isolation and anarchy. The people of the North seek a consolidated government because this is the only government which can give a field for industry and enterprise coextensive with their ambition and interests. A manufacturer of New England, or a merchant of New York, is utterly opposed to political boundaries on this continent, the crossing of which shall wring from him a duty or tax upon his merchandise or wares. As a necessary consequence, he desires to be subject, in reference both to his property and person, wherever these may happen to be placed, to identical laws. If he sells a bill of goods to a customer in South Carolina, he desires a common arbitrator—the courts of the United States, should any dispute arise as to payment. These laws too, he desires should reflect the spirit of the age, which is one of constant change resulting from growth. He has fully committed himself to the inductive principal of modern society, and follows wherever this leads as unreservedly as does the man of science in his investigations of nature. Under the guidance of principle permanence rests simply on excellence. He is wedded to nothing from habit, or tradition, or necessity; but is ready to throw away any past mode, or contrivance, the moment a better can be shown. He is equally facile in changing his own locality. He desires to see called into action any agency that can create capital, as a means of enhancing the value of his own—railroads; telegraphs; manufacturing establishments; improvements in navigation; tariffs; and anything that can give a spur to industry, or add a dollar to the general wealth.

Such is the genius of the North. No one from a Northern States plumes himself upon being a New Yorker, a Pennsylvanian, or a citizen of Massachusetts. To do so, he would be conscious of reducing his importance in ratio that his own State bore to the whole. He is a citizen of the *United States*, and if he has not interests in all, he desires to have all before him as fields for his enterprise, or that of his children. Each in turn may become his place of abode. Wherever this may, he desires to see wave over him the same emblem of nationality, so that change of residence shall bring no restriction, in the routine of his habits; in his pursuits, modes, or rewards of industry.

The moment we go South we find to a certain extent a contrast of all this—a contrast that brought on the present civil war. The South has an institution founded in force: of course, an institution that cannot be subject to the inductive method to which the North has committed itself, and by which it has grown to its present colossal proportions. To give the inductive principle free play South, would end in the destruction of its great institution in the larger part of its territory. Consequently, its great interest must rest under the ban of perpetual silence. But the antagonism does not end here. As the South blindfolds its labor, it can derive little or no advantage from the encouragement of its industries by government. The two sections have therefore always been at issue upon questions of tariff and internal improvements. The construction of a railroad to the Pacific would, necessarily, inure more to the benefit of the North than the South; to intelligence than ignorance; consequently it is strenuously opposed by the latter. In almost every question that could arise, the two sections were diametrically opposed—the North seeking to secure the aid of the government in promotion of its objects, by what may be termed a liberal construction of the constitution—the South to hold its rival in check by restricting the functions of government to as few subjects, and within as limited a range as possible. It was felt too, by the ruling classes at the South, that government could do but little for them. The markets for their crops were chiefly abroad. They desired no protection that their local governments could not supply. No act of the Federal Government could make the labor on their estates more productive. They fancied themselves oppressed by being compelled to contribute out of all proportion, as they believed, to the expenses of establishments in which they professed to have no interest. They saw nothing but danger in the free spirit of the North that alike challenged every institution and opinion, and stood ready to supersede whatever might stand in the way of its own advancement. Caprice or fancied interest might in time, turn this free, and to the South licentious spirit, against slavery. Every day was it relatively becoming stronger and stronger. The only way to avert the catastrophe was the destruction of the government itself, to affirm that the States were really the paramount power, and to restore the country to its chaotic condition before the adoption of the constitution, as a means of increasing the importance of the individual at the expense of the State. To the South the more negative and restricted the form of government, the better. Its highest ideal was the *plantation*, to be the owner and master of which was the most independent existence, as he fancied, on the globe. He owned his soil and the labor that cultivated it. Accident for years had given him exorbitant prices for his products. He felt no need of protection. To a person so situated, government, unless he could control it, was an oppressor instead of a benefactor. The government of the United States ceased to be a benefactor when the hold of the South upon it was lost

and was thrown off without compunction or sense of loss. In the formation of the new one ample provision was made in favor of the individual as represented by States, and against the risks of oppression, by the clause in its constitution, that each State might, at will, withdraw from the new confederacy and resume its sovereignty. This declaration fairly made up the issue between the two sections. It is a question between *nationality* or *tribes*—the North supporting the former, the South the latter proposition. The result is to determine whether we can combine or fuse into one people, with a nationality co-extensive with our present wide domain; with all the advantages that must flow from homogeneous laws, ideas, aims and pursuits; or whether we shall crumble into petty communities, like the contemptible republics of Spanish America, and waste our means in border strifes; and, as we sink in the scale of civilization, in intestine feuds.

We wonder that foreigners have not taken this obvious view of the question. With the success of the rebellion, this country ceases to be of commercial value or importance to them. It would become exhausted by the infinite causes of discord in store. The people of the North see the mighty interests imperilled and are fighting manfully and successfully for other nations as well as themselves. Already are they reaping the rewards of success. Prices are rapidly advancing to their normal standard under the most stable government. With a partial reclamation, by main force, of the Border States the market value of their stocks have risen at least 50 per cent. upon their prices a short time since. Everywhere, even among the Confederate States, is the military success of our arms financial success, in which the capitalists in London as well as in New York is interested, and in many cases in an equal degree. With the success of the rebellion the bonds of any Southern State are utterly worthless. What we have already gained only makes us the more anxious for complete success, which is unity—consolidation—a nationality as broad as the whole territory over which our flag ever waved. Nothing is to stand in the way of such result. No present defeat or disaster will weigh an ounce in the scale. We well know what is at stake, and that every success pays for itself a hundred times over. In the advance in prices of all kinds of property at the North, we have already demonstrated the value of our aims and policy. Securities of all kinds are steadily advancing in value, while at the South the Confederate Government is already tasting the bitter fruits of the subdivision principle it has introduced into its constitution, by seeing securities selling at one-third their nominal value, while within a year from the date of their issue, they will be utterly valueless.—*Hallett's Financial Circular.*

VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase the Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

12.	" 18 "	1 to 1	24.	" 32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, April 19, 1862.

Long Island Railroad.

At an election for directors of this company held in Philadelphia on the 8th inst., the following gentlemen were chosen: Coffin Colket, William E. Morris, Charles Emory, Charles J. Smith, H. W. Titus, H. L. Gaw, J. B. Ryers, George Neales, Joseph H. Trotter, M. Morgan, G. L. Willard, A. E. Dougherty, C. Godfrey Gunther. Mr. William E. Morris, who has for many years been President, has retired from that position, and is succeeded by Mr. Coffin Colket. Mr. Morris retains his place as a member of the Board of Directors. He assumed the management of the road when its affairs were in a very embarrassed condition, and having succeeded in placing it in a position to commence payment of dividends, which are expected to be continued hereafter, he now retires from his post. At the meeting of the Company, its affairs were stated to be in a prosperous condition and an expectation expressed that the dividend of 75 cents per share, which we have already noticed, will at least be maintained hereafter, while it may be greater.

☞ The New York Canal Board has resolved to reduce the toll on all westward-bound freight except sugars, molasses, railroad iron and railroad chairs, from two mills to one mill per mile for six thousand pounds.

Toledo and Wabash Railway.

We have received the report of this company for the fiscal year ending August 31, 1861. Many and insuperable obstacles have interposed to delay the publication of it beyond the usual period; it is hoped, however, that the facts and information now communicated will prove none the less valuable and interesting on that account. The total revenues of the company for the year, derived from all sources, were $1,012,235 72—showing an increase of $150,513 28 over those of the preceding year. The following statement presents a brief analysis of such revenue:

From passengers	$223,386 13
" freight	717,812 04
" mail	24,275 00
" express	16,702 48
" rent of cars and engines	6,177 62
" miscellaneous collections	4,651 91
" fuel account	19,230 54
Total	$1,012,235 72

And the expenditures were:

Repairs of road	$180,047 93	
" bridges	7,654 88	
" engines	49,109 73	
" cars	45,630 07	
" buildings, etc	12,748 68	
Fuel	64,795 47	
Oil and waste	11,847 40	
Loss and damage	8,107 70	
Agents and clerks	27,257 54	
Conductors, engin'rs, etc.	81,902 43	
Handling freight	18,408 16	
Taxes and insurance	12,160 23	
Salaries of officers	10,946 49	
Rent of depots, etc	6,005 00	
Advertising & agencies.	10,419 99	
Gen. superintendence	5,000 00	
Car service	12,432 47	
Overcharges on freight.	9,647 21	
All other expenses	42,554 86	
		611,676 24
Balance of net income		$400,559 48

The expenditures includes all renewals of iron, chairs, rebuilding of bridges, etc. They are divided as follows: to Superintendent, for transportation expenses, $543,862 71; and to Treasurer, for taxes, rents, insurance, salaries, etc., $67,813 53. The net surplus has been applied to the purchase of equipment, the erection of grain and freight buildings, the payment of interest on the funded debt of the company, and the further adjustment of some minor accruing obligations, as will more clearly appear in the following statement:

For equipment, buildings, cars, etc.		$87,712 28
" contract of Stebbens & Co., assumed		2,000 00
" additional right of way		171 00
" unpaid claims of previous year		635 25
First mortgage coupons	$232,229 00	
Funded coupons (notes)	11.715 24	
Sinking fund coupons	12,646 66	
Instalment of principal on notes	27,749 01	
Coupons of previous year paid	2,358 41	
		286,698 32
Balance		23,342 68
		$400,559 48

The company has no over-due obligations. Its bills payable having been promptly retired as they became due. The amount of these named in the annexed balance sheet is $55,247 68. The matured coupons, which are payable, but which have not been presented for payment, and hence constitute a pending liability upon the company, amount in the aggregate to $8,766 98.

The capital of the company, and which primarily represents the cost of the road and equipment, amounts to $8,284,595 86. The general stock is composed of 27,413 shares of $50 each, amounting to $1,370,650: and the preferred stock of 17,174 shares of $50 each, amounting to $858,700—making a total stock capital of $2,229,350.

The funded obligations of the company consist of $3,400,000 first mortgage bonds, $2,500,000 second mortgage bonds, and $180,705 sinking fund bonds. Of the issue of first mortgage bonds, $900,000 are secured by a mortgage upon that portion of the road lying in the State of Ohio; and $2,500,000 upon that portion lying in the State of Indiana—the former being entitled the Toledo and Illinois Railroad bonds; and the latter, the Lake Erie, Wabash and St. Louis Railroad bonds. The second mortgage bonds were issued by the companies organized in 1858, and which became the owners, by purchase, of the franchises and also the personal and real property of the road, in pursuance of a decree and order of court for the sale thereof. Of this issue of bonds, $1,000,000 are secured by a mortgage upon the Ohio division; and $1,500,000 upon the Indiana division—the first named being designated the second mortgage

bonds of the Toledo and Wabash Railroad Co.; and the last, the second mortgage bonds of the Wabash and Western Railroad Co. The mortgage upon which both classes of bonds are predicated constitute a lien upon the entire real and personal property of the company, rateably apportioned between the States of Ohio and Indiana, and are the only mortgage liens now existing upon the road.

The sinking fund bonds are a funded obligation created by the present company for the sole purpose of retiring coupons Nos. 2, 3 and 4 of the second mortgage bonds, maturing Nov. 1, 1859, and May 1, and Nov. 1, 1860. The total amount of the issue has been permanently fixed at $249,-112 50. There have thus far been executed and issued of these bonds for the redemption of the coupons designated $180,705—leaving a residue of $68,407 50 to be issued for those still outstanding. The coupons attached to the sinking fund bonds have been promptly paid as they matured.

The remaining element of capital liability comprises the funded and unfunded coupons Nos. 8 and 9 originally attached to the first mortgage bonds, and which matured Aug. 1, 1857, and Feb. 1, 1858. Of these there remains still outstanding and subject to redemption by the substitution of the promissory notes of the company, the sum of $8,045 45, which includes the interest accrued on such coupons to the dates of the notes issued therefor. These notes are dated Nov. 1, 1858, and March 1, 1859, bear 7 per cent. interest, and are made payable in five equal annual installments, commencing Nov. 1, 1860. The aggregate amount of these notes thus far issued is $139,643 92, and the first instalment of principal having been paid, there now remains a net principal outstanding of $111,894 91. The interest upon these notes has been promptly met. There were outstanding of the coupons at the commencement of the fiscal year $52,389 49—showing that the company have redeemed during that time $44,344 04.

The coupons of the second mortgage bonds, maturing May 1, 1861, amounting to $83,037 50, together with those maturing Nov. 1, 1861, of corresponding amount, it is proposed to pay in second mortgage bonds, of which bonds the company hold nearly a sufficient amount unappropriated to redeem and pay both instalments. The necessary diversions during the year of over $90,-000 from the earnings of the road to procure additional equipment, etc., will in some degree serve to explain why the company now seeks this temporary concession of the holders of the second mortgage bonds. It is hoped that it will be cheerfully and promptly granted, since it will have the effect of placing the finances of the company upon a sound basis, thus enabling it to meet its funded interest with regularity; and by the establishment of this fact, at once give to its securities a settled market value, that will much more than compensate for the concession asked.

Among the assets mentioned in the annexed balance sheet are $3,000 of the 1st mortgage bonds of the Quincy and Toledo Railroad Company, which were obtained through a subscription originally made by a former company, and assumed by this. The asset designated as bills receivable, amounting to $3,208 19, embraces several promissory notes obtained in 1856 and 1857, which are held as collaterals to claims upon which judgments have been obtained, and are being pressed to adjustment with all practicable dispatch. The charge against the T., L. and B. R. R. Co., of $11,454 94, is for balances due for the transportation of iron used in the construction of that road, and delivered at Logansport in 1859, and for which this company hold as collateral sundry notes executed by stockholders of that company, in payment of their respective stock subscriptions, amounting nearly to $15,000. It is hoped that a part, if not the whole of the claim may be realized.

The company experienced considerable inconvenience during the early part of the year, by reason of the unsettled condition of the Western currency; but by a prompt and decided refusal to receive and pay out all depreciated money of every description, the company was not subjected to any very severe losses.

The entire length of the road is 242.4 miles, of which 75.5 miles are in Ohio, and 166.9 miles in Indiana. The gauge of track is 4 ft. 8½ inches.

The equipment consists of 35 locomotives; 18 passenger, 10 mail and baggage, 564 freight, and 90 platform cars. The number miles run by engines with passenger trains was 304,097, by freight trains, 501,917, by wood and gravel trains, 59,488 —total miles run, $865,502. No. of passengers carried 186,759. Among the articles of freight carried east were: 4,459,320 bushels of grain, 3,-874 car loads of live stock, 667,097 feet lumber, and 102,126,100 lbs. sundries. Among the articles carried west were: 7,011,204 ft. lumber, 97 cars hogs and 72,268,979 lbs. sundries. The results of the passenger traffic show a falling off of $10,159 68, while the increase in freight earnings has been $149,741 51. The report says:

The most encouraging feature of this increase is that it has been derived from the legitimate and natural business of the line, and not as has been the case with other roads, from a temporary diversion caused by the closing of the Mississippi river and Southern lines of Railroads. In fact, the closing of these great thoroughfares has so far operated to our prejudice instead of advantage, since the carrying capacity of our principal Eastern connections has been greatly overtasked by the unusual amount of South-western freight suddenly thrown upon them, and consequently our facilities for forwarding from Toledo have not been nearly equal to our requirement.

The completion of the bridge of the Quincy and Toledo Railroad over the Illinois river at Meredosia, during the past winter, removes a serious obstruction to our connections with Quincy, and which has, hitherto, absolutely prevented the shipments of heavy and bulk freights. Immediately on the opening of this bridge for the passage of trains, a large grain traffic commenced from the various stations west of Meredosia, Quincy and towns contiguous thereto. In this connection it is a subject of regret that for want of transportation facilities, only a small portion of the freight offered, during the year, could be transported, and hence it has been without our power to fully determine the actual value and importance of this new auxiliary connection. However, the large traffic already developed, sufficiently demonstrates the fact, that when ample equipment is provided, the business to be derived from this route will at all times constitute a prominent and staple element in our freight traffic, and largely contribute to our current revenues.

The steady growth and development of the grain traffic of the road is highly gratifying, and the large increase in freight for the year, is chiefly owing to this cause. During the present year there have been transported about 4,200,000 bushels of grain against 2,971,000 in the previous year, and yet the Company have by no means possessed sufficient facilities to move all that has been offered for shipment. Owing to the want of cars and the still greater want of Elevator capacity at Toledo, a large share of the grain business accumulating upon the Great Western and Logansport and Peoria routes has been forced off to Chicago, notwithstanding the preferences of those wishing to forward, were strongly in favor of Toledo as a market. It is of the highest importance that our Company should provide facilities for transporting and storing grain, greatly superior to those now possessed, and, also, that particular care and effort be bestowed in fostering and promoting this most important and staple branch of our traffic. The development of the business of the road thus far, forces the conviction, that the cereal products of the country tributary to the line, are to constitute the real elements of its success and future prosperity, and it is equally apparent that the vast extent of these products if fully secured upon the road will be sufficient to tax its utmost capacity, and demonstrate the ability of the Company, when free from financial embarrassments, to make ample and rewarding returns upon the property invested.

The tonnage of rolling freight moved, has far exceeded in amount, that of any previous year, and likewise continues to steadily increase with each succeeding month. The tonnage of the more staple commodities, such as flour, beef, pork and highwines, during the year, has been unprecedently large, and what is more gratifying, the rates obtained have been more satisfactory and remunerative than ever before, encouraging the hope that the period of violent and ruinous competition between rival routes for this class of traffic, has passed away. The recent erection of a new and commodious freight house at Toledo, has done much to increase and attract this class of freight to the road, indeed, it is believed that no corresponding investment of the Company has been equally effective in popularizing the road with the shippers of rolling freight. The advantages of this additional storage room to our business, especially during the latter part of the season, has been inestimable, and it is apparent, if the capacity of the building was doubled, the Company would soon be reimbursed by a large increase of business and other benfits more than equal to such an outlay.

The expenses of the operating department have been considerably increased over those of the preceding year, owing to the necessity of making some important renewals of the track, and also the re-building of other original structures. Among the most prominent renewals mentioned are: the purchase and laying down of 670 tons of new iron, the re-rolling of 500 tons of old rails, and the repairing of 2,700 bars. There have been used 21,000 superior wrought iron chairs, 681 kegs of spike and 73,000 cross-ties. Several of the bridges have been either wholly rebuilt, or a large portion of the timber renewed. The operating expenses have also been further increased by the rebuilding of cars, and other general renewals made in the equipment of the road.

Sec'y and Treas.—JOHN A. DRUMMOND, Toledo.

General Sup't—GEO. H. BURROWS, Toledo.

American Trade with Canada.

The report of the Committee on Commerce of the House of Representatives on the subject of the Reciprocity Treaty with Canada contains some statements of much interest that have not received the attention which they deserve. The document altogether is very elaborate, and the suggestions appear to us to be fair and practicable. We condense from it the principal facts stated as to the extent and productiveness of British America and its commercial relations to the United States.

The provinces comprise altogether a territorial area of 8,478,380 square miles—more than the extent of the United States, and nearly equal to all Europe. Though a considerable portion of that immense country is uninhabitable, yet as a recompense the arid plains extending northward through Texas and Kansas almost disappear on passing the boundary line between us and Canada. The isothermal line of 60° for summer rises almost to the 61st parallel of latitude in the interior plains. It is asserted by those who have given close attention to the subject that the habitable but undeveloped area of the British possessions on this continent comprise sufficient territory to make twenty-five States equal in size to Illinois.

The report touches on the several provinces, their extent, population, resources, etc. After referring to the advantages of a home market and the fact that the Canadian Parliament had, in 1858, recommended the establishment of a *complete* reciprocity, it shows the signal benefits which the present imperfect measure has conferred upon Canada. For cattle, sheep, swine, the coarse grains and several kinds of lumber, this country constitutes for Canada the only market worth naming. In 1859, only two per cent. of the large amount of wheat received at Toronto was sent off by the river St. Lawrence, the rest passing through American ports.

The following statement shows the course of trade between this country and Canada since the beginning of 1856, when the treaty went into full operation. The second column shows the products of the United States on which duty was paid in Canada; the third, Canadian products which paid duty in American ports, and the fourth, the excess of the first named above the other. The statistics of 1861 have not yet been received.

Year.	U.S. Products.	Canadian do.	Excess of U.S.
1856	$7,981,284	$136,370	$7,844,914
1857	6,203,320	160,086	6,043,234
1858	4,524,403	119,358	4,405,145
1859	4,197,815	173,478	4,023,838
1860	4,425,011	174,259	4,250,742

The report observes here that while we have levied annually only about $40,000 on Canadian productions, the average amount of duties on American productions in Canada has been more than $1,000,000 annually.

Complaint is made that while, in accordance with the terms of the treaty, Canada was to grant the use of her canals to American vessels on the same terms as those enjoyed by British subjects, a method of refunding certain duties has been established, by which a discrimination of ninety per cent. is made against our vessels. The fact that the Canadian Parliament has created several free ports is adduced to show that the want of revenue is not the only motive impelling to this unfriendly legislation.

NAVIGATION OF THE ST. LAWRENCE.

At the commencement of the treaty 1,600 vessels, with an aggregate tonnage of 400,000 tons, were employed on our Northern "inland seas;" but during a period of six years only forty American vessels, with a burden of about 12,550 tons, have passed seaward through the St. Lawrence, and less than one-half of them ever returned. The number of British vessels, however, which cleared from the port of Chicago alone in 1857 was 109. It may be observed that the privileges on Lake Michigan granted to the Canadians are similar to those confirmed upon us in Canadia waters, including the canals.

The following table shows the comparative imports and exports into and from Canada by way of the St. Lawrence, from 1853 to 1860 inclusive:

	Imports.	Goods in transitu for U. S.	Exports.
1853	$19,268,260	$1,047,964	$15,556,594
1854	21,171,735	495,326	14,709,621
1855	11,494,028	18,014	8,195,500
1856	15,319,361	13,492	11,817,187
1857	14,561,884	183,789	13,756,786
1858	10,795,077	26,916	9,727,413
1859	11,472,754	76,314	8,983,773
1860	13,527,160	21,505	8,400,096

The trade between Canada and this country continues to increase from year to year. The following statement shows that a major part of all her exports are sent to the United States:—

Years.	Total exports from Canada to the U. States, G't Britain and all other countries.	Exports from Canada to the United States.
1855	$28,108,461	$20,002,290
1856	32,047,016	20,218,653
1857	27,006,624	14,762,641
1858	23,472,609	13,373,138
1859	28,102,378	13,922,314
1860	34,631,890	20,698,398
Total exports	$168,368,978	$97,955,504
Total exports to the U. S.	97,955,504	

It will thus be seen that as against all other countries, including Great Britain, the balance is $27,542,080 in our favor. The importations into Canada for the same period tell an equally favorable tale:

Years.	Imports into Canada from the U. S. and all other countries.	Imports into Canada from the U. S.
1855	$36,086,189	$20,878,676
1856	43,584,387	22,704,509
1857	39,430,597	20,224,650
1858	29,078,527	15,685,565
1859	33,555,161	17,592,916
1860	34,447,935	17,273,029
Total imports	$215,982,776	$114,259,345
Imports from the U. S.	114,259,345	
Imports from all other countries.	$101,723,431	

—Showing an excess in favor of the United States, amounting to $12,535,914.

The following table shows the imports and exports between Canada and the United States, of articles *free* from 1855 to 1860 inclusive:

Year.	Imports into U. S.	Imports into Canada.	Excess in favor of Canada.
1855	$16,476,093	$7,725,561	$8,750,532
1856	17,810,684	7,909,554	9,901,130
1857	12,812,308	8,642,030	4,170,278
1858	11,514,364	5,564,615	5,949,749
1859	15,289,070	7,106,116	8,182,953
1860	20,365,829	7,069,689	13,296,140
Totals	$94,268,348	$44,017,565	$50,250,783

Complaint is made that in this unequal condition of trade Canada should have increased so greatly her tariff against American products as is shown in the annexed statement of duties levied since the treaty went into effect:

Articles.	1855. p. ct.	1856. p.ct.	1857. p. ct.	1858. p. ct.	1859. p.ct.
Molasses	16	11	11	18	30
Sugar, refined	32	28	26	26½	40
Sugar, other	27½	20	17½	21	30
Boots & Shoes	12½	14½	20	21	25
Harness	12½	17	20	21	25
Cotton goods	12½	13½	15	15	20
Iron "	12½	13½	15	16	20
Silk "	12½	13½	15	17	20
Wool "	12½	14	15	18	20

The Committee, accordingly propose the establishment of a treaty between the two countries, resembling the *Zollverein*, which has done so much for the interests of Northern Germany and has stood the test of nearly half a century.

Since writing the above, Mr. Galt, the Canadian Minister of Finance, has presented to the Provincial Parliament the Trade and Navigation returns for 1861. From an abstract of these given in a Toronto paper we learn that the total value of importations into Canada that year was $43,064,836, being an increase over 1860, of $3,006,900. Of this excess, however, $3,304,675 consisted of bullion. The duties collected in 1861 amounted to $4,768,192, against $4,758,465, the year before. During the first five months of the year it is stated that the excess of revenue amounted to $400,000, showing a corresponding decline in consequence of the outbreak of war in this country. The exports foot up to $34,717,248, to which Mr. Galt adds 12½ per cent. to cover such goods as are apt to find their way clandestinely across the frontier, making the aggregate $36,611,195, an increase of $1,982,305, as compared with 1860.

The troubles in this country seem to have had the effect of greatly stimulating business on the St. Lawrence. Last year the imports by that channel amounted to $17,249,055, against 13,548,-

665 the preceding year. The imports show a still larger increase, having been $22,524,735, against $14,037,043 in 1860. The entire trade thus shows an increase on that great artery amounting to $12,187,772—the result partly of disturbances in the United States; partly of the excellent crop of last year and the greater demand for them in Europe.

Pittsburgh and Erie Railroad.

Work is shortly to be resumed on this road, at its South end and it is thought it will be finished to New Castle with as little delay as possible. A strong effort is being made at the point last named to secure the means of building the New Castle and Beaver Valley Railroad.

Communication between New York and Washington.

To the Editors of the AM. RAILROAD JOURNAL:

Not only the importance but the absolute necessity of a more direct and uninterrupted communication between New York and Washington is universally admitted. There is not, certainly, a route of such importance in the world at the present time, politically, socially and commercially. Nor is there I venture to say any other route of its length of any importance subject to so many vexations, delays and annoyances. To quote the memorial of the New York Board of Trade to Congress:—"This line of travel, commercial traffic, and postal conveyance, comprises within a distance of two hundred and forty miles the capital of the nation, the three largest cities of the Union and forms the central and most important link of commercial communication between the Northeast and Southwest. The entire population of five or six millions in all the Eastern States, and a large portion of the States of New York and New Jersey, including the city of New York, with a still larger population in all the States south of the Potomac and Ohio, are under the necessity of using this line of conveyance in all of their intercourse with the opposite region; and this communication includes the varied operations of commerce, postal affairs and travel."—All this immense intercourse is carried on subject to six complete transfers in a distance but five miles more than the distance from New York to Boston and requiring 12 hours' time. Either all these embarrassments must be encountered, or a longer and more circuitous route must be adopted on which distance alone involves delay. Can there be a project of greater importance to the country than the improvement of this great thoroughfare to the fullest extent possible; and ought not this route to combine every feature of directness, speed, capacity and freedom from delay, of which a railway is capable? Whether we look to the present imminent wants of the country or to the future, there can be but one reply to these questions. There are no doubt local interests to be affected by any such changes as are required, but ought not interests of this kind to be secondary in a great question like this involving the interests of the whole country?

It is to be hoped that the present war will cease so soon, that it cannot long be held up as an argument for any enlargement of accommodations upon this route, but there are necessities outside of this exigency sufficient to warrant the most lavish expenditure. No patching up of the breaks in the various links now existing will answer the purpose.

True a slight increase of speed might be adopted. The connections might possibly be made more certain and reliable. The cars might run through or around Philadelphia. A bridge might be constructed at Havre de Grace. The cars might be run through or around Baltimore, and thus an hour or two might possibly be gained.

Still would we have a narrow, contracted and meagre means of communication between these two great points, not at all commensurate with their importance and utterly incapable of fulfilling either present or future requirements.

Who can foretell how soon a foreign war may render necessary tenfold the facilities we now have? Who will not say that a highway from New York to Washington over which cars could be run at the rate of 80 to 100 miles per hour with perfect safety, would not within the past year have been worth more to the nation than its entire cost.

I have indulged in these few remarks preliminary to suggesting as particularly applicable for this route a plan heretofore suggested by me for the Pacific Railroad, and published in your columns three or four years ago. I noticed in the *New York Daily Times* some weeks since, a similar suggestion over the signature of Silas Seymour, late Chief Engineer of the State of New York, as follows: "A question may soon arise as to whether roads connecting large towns like New York, Philadelphia, Baltimore and Washington should not be constructed with a narrow gauge double track under each truck so as to give a width of at least 20 feet to the cars and a capacity to the engine which will enable it to haul trains at a speed of one hundred miles per hour with safety. This I have long regarded as the next great step to be taken in the improvement of railways."

This is precisely the plan I then suggested, and I am pleased that it should have been endorsed by Mr. Seymour.

Nothing can be more simply mechanical, nothing more perfectly practicable, nothing more certain to attain desired results.

Believing it to be precisely what is needed on the route in question, as well as on the Pacific line, I give you the description substantially as before, having seen no reason to change any important feature.

In these startling times, when the creation of a hundred days has demonstrated the comparative uselessness of the navies of the world, I may not, perhaps, be considered quite so visionary in thus arguing the practicability of such speed and capacity in a railway as I might have been one year ago.

What is needed is—

1st, Greatly increased speed, with at least the same safety as at the present rates.

2d, Greatly increased safety if possible.

3d, Increased capacity for passengers and freight with accommodations and comforts for travelers, far beyond any that can possibly be obtained upon our present roads.

And all these conditions must be obtained, with a durable and substantial road, laid upon *terra firma*.

By the method I suggest, the very elements out of which any one condition is complied with, are the elements out of which all the others are fulfilled, and there can be no question, as to obtaining the following results, viz:

The attainment of a speed at least twice as great per hour, as is now attained on our best roads.

Increased safety, even almost to the extent of absolute immunity from derailment, by reason of unseen imperfections in the track, and from the breaking of axles. Immensely increased capacity and increased accommodations and conveniences, even to the extent of sleeping rooms, eating rooms, sitting rooms, and all the comforts with may be had in our steamers.

This, at first, may seem rather a startling proposition, but is it half as startling, as was deemed the first proposition of running a locomotive engine at a speed of ten miles an hour?

With all that has been accomplished since that time, I am yet unable to sit quietly down, in the conclusion, that perfection has been obtained in the manner of constructing railroads, or railroad machinery, but I have faith to believe, that as many and as great improvements are yet to be made, as have been made since the "Rocket" made her first memorable trip.

Both theoretically and practically, the obstacles which prevent a regular speed of even 50 miles per hour upon our present roads, are sufficiently obvious.

It is an indisputable fact, that in order to increase the speed of locomotive engines, increased diameter of driving-wheel is necessary, and then increased boiler, or evaporating surface is necessary to create power for these large wheels.

Granting that this increased power could be obtained, to the extent required for a speed of 100 miles per hour, it is manifest that with driving-wheels of the proper size, say 10 to 12 feet in diameter, engines upon the ordinary general plan of construction, would be so high in proportion to their base, that the speed would be unsafe.

The speed would be unattainable, for the reason, that the engine could not be kept upon the track. Absolute perfection in a railway track is not to be attained, or if it was, it could not be maintained.

The crushing of the timber under the rails, the giving away and settling of the joints, the settling of the earthwork, the crushing and wearing of the rails—all these are contingencies not to be avoided, and occurring more or less, as the materials are better or worse, out of which the road-bed and tracks are constructed. With our best railways, thoroughly ballasted with the cleanest gravel, and of the best materials throughout, these difficulties occur on every rod, and a speed of 100 miles per hour would not be safe, even if the required wheels and power could be obtained.

But the power cannot be obtained, to the required extent for any useful service, upon the ordinary gauge of road. These difficulties would naturally bring us to the conclusion, that a wider gauge is necessary.

Increased width, would, of course, give more space for boiler—would admit larger wheels, without raising the centre of gravity, and would thus permit increased speed, with safety. That is to say, the inequalities and imperfections of the track remaining the same, a higher rate of speed would be allowable and attainable, upon a wide, than upon a narrow gauge. This theory, however, only applies in its fullest extent, upon a straight line of road. An increase of gauge brings up other difficulties, viz: increased friction upon curves, increased tortion of axles, increased wear and tear of road, by reason of the necessarily increased weight of engines, etc., etc., and all these without attaining advantages of speed, safety, capacity and convenience, to the extent required. I consider any material increase of gauge, therefore, inadmissable, although I deem an increase of base an absolute condition, in obtaining these advantages.

To establish this assertion I have made, with regard to the limit of speed of engines, with limited drivers, I beg to state the results of experiments made in England a few years ago, with an engine constructed upon the most approved proportions, having drivers seven feet in diameter. The experiments were first upon a cold inclement

day, a wet rail, with an unfavorable wind, and under circumstances entirely at variance with the necessary conditions for making high speed. The result was 71 miles per hour, the engine having a surplus of steam, and "blowing-off" constantly.

A few days subsequent to this trial, it was again taken out, under what were considered the most favorable circumstances, fair weather, dry rail, no wind. The result was precisely the same—a speed of 71 miles per hour, and with no apparent difference in amount of surplus steam. The conclusion is irresistible.

The speed of the engine was not limited by outside conditions, of track or weather, but depended entirely upon something inherent in the engine itself.

The absolute incapacity of the pistons and connections to move any faster—the inability of the steam to enter the cylinders and exhaust with greater rapidity—that is to say, the resistence of the blast, and the unbalanced pistons and connecting rods. It follows therefore, that had the engine been constructed with larger driving wheels, it would have had capacity for a higher rate of speed, for there was no difficulty experienced in generating steam.

But it is questionable whether, with the increased drivers, and the consequent increased height of boiler, it would have been compatible with safety, to have driven it even at so great a speed as 71 miles per hour.

It may not, therefore, be impossible to build an engine, simply as an experiment, which could be driven at a speed of perhaps 100 miles per hour, provided the condition of the track did not present insurmountable difficulties.

These I have before referred to. To a certain extent, they are unavoidable, and the motion, both vertical and lateral, thereby created, will always present an insuperable obstacle to any great increase of speed, upon the ordinary gauges, even if power for useful purposes could be obtained.

The most perfect track, if examined critically, will show a succession of vertical curves, produced by settling at the joints, even if depressions are found at no other point.

These low joints, if equally depressed when opposite, create a vertical motion only, and when laid alternate, or not opposite, create a lateral or vibratory motion, still more inconsistent with high speed.

It is found, that in consequence of the loose nature of the material, near the sides of the road-bed, the harder and more compact material in the centre, becomes a fulcrum, upon which the track vibrates, and where a depression is found in one rail, a corresponding elevation is very generally found in the opposite one. This is more particularly the case, where the joints of the rails are laid alternate.

There is, then, at the centre a neutral point, where there is no disturbance.

Could a load be sustained at this point, it is evident that no motion, under such conditions, would be communicated to it; or taking the worst feature, viz: a settling of one rail, without the corresponding elevation of the other, and it is evident, that but one half as much disturbance occurs at the centre as at the depressed rail.

Under the present mode of construction, the car-bodies and their loads are sustained at points nearly over each rail, and as a necessary result, a disturbance of the level of the track, causes a disturbance of the level of the car and its load—the higher and wider those are, the greater and more dangerous is the motion.

Now, if a car body could be balanced on a single point, only at the centre of each of the trucks under it, its level would not be disturbed by any difference in the elevation of the opposite rails. Then if this car body be of sufficient width to extend out on one side, projecting beyond the two rails, far enough to be sustained by other trucks, upon two other rails having bearings at their centres only, either of these trucks might be disturbed in its level, by a depression in one rail, and a corresponding elevation in the other, without in the least disturbing the level of the car-body.

It is precisely upon this principle that I have designed a road.

I propose to lay four parallel rails, of the ordinary pattern and weight, forming two distinct tracks, each of a gauge of 3 to 4 feet, and having an intermediate space of 5 to 6 feet. These tracks, I propose to lay upon distinct and separate sleepers, having a trench or ditch between them, but to connect them by ties of iron, or other suitable material, so as to preserve a uniform gauge, in the intermediate space. I propose to construct narrow trucks for each track, and rest each car-body upon four trucks, sustained by a single bearing only, at the centre of each. It is perfectly evident that the car-body and its load, would have no vibratory motion communicated to it, by the inequalities incidental to each independent track, and that its load could not be seriously disturbed, unless one track should be absolutely lower than the other; against this latter contingency, we have a base of 12 feet, for a car no higher than is now used, upon a base of less than 5 feet.

By an arrangement of this kind, the friction upon curves is greatly reduced, (for we have only a gauge of 3 to 4 feet,) the vibration and tortion of the axles is lessened, while, at the same time, the capacity of the axles to resist all strains, is immensely increased. And yet, we have the indispensable condition required for high speed—a wide base. Thus are combined all the advantages ever claimed for the wide gauge, with all the advantages that can possibly be claimed for the narrow gauge, and yet, all the disadvantages ever argued by the respective champions of either, as belonging to the other, are entirely avoided.

I propose, also, a peculiar system of laying these four rails, and that is, with the joints of the outside rails opposite each other, but alternated with the joints of the inner rails, which shall also be opposite each other. It will be perceived, that by this system, each independent track is laid with alternate joints, but, always, occupying the same relative position, with the joints of the opposite track. The inevitable depression of the joint, causing a corresponding elevation of its opposite rail, at its centre, the middle of each track, or the half-way point between the two rails, is a neutral point, where is no motion, and the inequalities of each track are such, that the opposite trucks are either inclined towards each other, or from each other, at precisely the same moment, thus counteracting each other, and avoiding both the vertical and lateral movement of the car-body, caused upon an ordinary road, by either opposite or alternate joints. There would be, of course, a tendency of the centre bearings, upon which the car-body rests, to approach each other, or recede from each other, as the inclination of the tracks should be inwards or outwards. The simple apparatus used in all well constructed car-trucks, provides fully for this tendency, permitting the truck to move a short distance, laterally, or to incline, without moving the centre bearing at all. Upon curves, where it is now found necessary to incline the cars, by raising the outer rail so much, as oftentimes to create alarm among passengers, the level of the car-body may be perfectly preserved, and the object fully gained, by inclining each distinct track, but keeping the centres always upon a level.

I propose to construct opposite trucks in such a manner, that one shall act as a guide for its mate. The most dangerous causes of derailment, are not great obstacles, extending across a track, because such obstacles, whether placed by design or accident, are to be guarded against by a suitable police; but, by far the most serious danger, is from unseen defects in the track itself, or rather in a single rail of the track, such defects as would not be apparent to the casual and careless glance of the repairers, or as could not readily be seen by the guard or engine-driver of a train.

A broken chair, allowing the ends of the rails to slip by each other; a short and sudden crook in a rail; a worn rail, with a short depression, crushed in its surface; the breaking of a rail; the sudden settling of a joint, under a passing load—all these are causes of derailment, at high speed, and causes, too, from which the most serious accidents may occur, because, not being readily perceived, they are met with while running with entire confidence.

The connection I propose, would prevent any truck meeting with such obstacles, from turning upon its centre, so as to leave the line of rails, without the opposite truck, to which it is attached, should turn also.

Take, for instance, the case of the broken chair and defective joint. This condition to cause derailment, must not only occur upon both the tracks at precisely *opposite* points, but *must* occur on alternate rails. This is impossible, for the joints are *not opposite* in alternate rails.

The probability of conditions of this kind, sufficient to cause derailment, occurring upon both tracks, at precisely opposite points, is so remote a contingency, that I think I am warranted in claiming, that the plan involves almost absolute safety.

As a general thing, the ends of the rails, it is well know, are the points where they first fail, and this, simply because they are generally the lowest points. An unavoidable effect, from the manner of constructing our present roads is, that when a wheel sinks into the depression caused by a yielding joint, the car-body receives a "cant" in that direction, and the impingement upon the rail is increased, by the whole impetus of the load. If we keep the load still, and resting upon a single point, precisely in the centre of each truck, it is manifest, that no matter how much the truck may be twisted, or distorted out of level, by the inequalities of the track, the weight is distributed alike upon all the wheels, and the joint, or depression, is not subjected to any greater impingement than any other part of the rail. Both rails and machinery are thus relieved, and an immense saving made in the *most important* item of cost, in operating railways, even at a far higher than ordinary rate of speed.

It is found practicable, upon all roads, to run cars constructed with a width, about double that of the guage.

Taking this as a proper proportion, I consider it safe to construct cars of 20 feet width, to a base of 12 feet, particularly as it is not necessary to increase the height materially. Carrying out the proportion in full—if we double the width of track, we may not only double the width of car but may also double the height, the centre of gravity remaining in the same relative position. But as the height is not increased seriously, with the increased base, the centre of gravity is much lower, than in cars of ordinary construction. In *proportion to base*, these cars would be but 4-5ths the width, and *one half* the height of cars on ordinary roads.

This, independent of any other consideration, would permit increased speed. The cars may be of any length, within the limits of the required strength, but say, for example, 60 feet. You can readily imagine, what conveniences and accommodations, may be provided upon cars of these dimensions, and it is, perhaps, unnecessary for me to make any suggestions. Sixty passengers may have comfortable sleeping accommodations, in a night-car of this size, not upon shelves hung around the sides of the car, but in state-rooms. More than that number could sleep in a car, if arranged with births upon the sides, and with the portable apparatus used in our steamboat cabins, for the centre. Other cars may be finished, for cooking and eating rooms. Cars for day trains, may be divided into saloons and sitting-rooms, with sofas, tables, &c., &c., or may be provided with uniformly arranged seats, as in our present cars. All the accommodations that can possibly be required by travelers, can be had, to such an extent, as to render it unnecessary for them to alight even between the Atlantic and Pacific.

Am I not warranted, therefore, in saying that the proposed method of constructing railways, and railway machinery, will give ease of motion to the

car; will lessen the wear and tear of both road and machinery; will largely increase comforts and accommodations of travelers; will immensely increase the capacity of the road, for any kind of traffic, and will permit a speed of 80 to 100 miles per hour, with increased safety. It remains to be seen, whether the proper arrangement of machinery can be had, and the power generated, to accomplish this speed.

I propose to construct a double locomotive, reserving the centre space between the tracks, exclusively for the boiler.

There would be two distinct sets of driving wheels, opposite each other, two cylinders on each side, with all the requisite machinery and trucks, forming substantially, two distinct locomotive engines, constructed for a guage of 3 to 4 feet, with a large and capacious boiler between them, the two sides acting entirely independent of each other, and having no connection whatever, except that they would be attached to the same boiler, and would have a common throttle-valve and reverse-lever.

The axles of the driving-wheels, not extending across the space occupied by the boiler, it matters not how large the drivers are. The boiler remains in the same position, placed as *near* the surface of the road-bed, as the fire-box will permit. Immense power for propelling the large drivers, is obtained by the four cylinders, and in order to supply steam, we have room for inserting a boiler of 5 feet in diameter, if required, The fire-box being directly in the rear of the driving-wheels, may be enlarged even to the width of the track, and, if necessary, small anxiliary boilers may be placed between the driving-wheels, on each side of the main boiler.

Thus are obtained all the conditions for speed. Large drivers, powerful machinery, and unlimited capacity for generating steam, and at the same time, the centre of gravity is kept near the surface of the track, and the height of the engine, not at all dependent upon the size of the drivers.

The same principal of sustaining the load, at points precisely in the centre of each track, as arranged in the case of the cars, may be adopted in the construction of the locomotives, and the leading and trailing wheels may be connected, as a means of safety, in the same manner.

The weight of engine, and also the weight of cars, is increased beyond those now in use, but the number of rails for sustaining them is also proportionally increased. And this is a peculiar feature of this invention, to which I wish to call your attention. In enumerating the disadvantages attendant upon an increase of guage, I have mentioned the increased wear and tear of rails, by reason of the increased weight of machinery.

It might be asked, Why not make the rails heavier? Why not have two rails, weighing each 100 lbs. per yard, as well as four rails, weighing each 50 lbs. per yard?

The answer to this is, that all experience proves, the durability of a rail, or its capacity to resist the action of heavy loads, not to depend so much upon the weight per lineal foot, after reaching a certain limit, as upon the tenacity, or adhesiveness of the particles of the iron.

The rail itself may not break or bend, and yet its surface crushes and laminates under the action of heavy locomotives, so as to be unfit for use, and still nearly all of the original iron is left. Nothing is added to the capacity of the iron, to resist the crushing or lamination of the surface, by making it heavier or stiffer. Manifestly, the proper way, and the only sure way to preserve the rails, while increasing the weight and power of the engines, is not to increase the size of the rail, but to increase the number of wheels, or the number of rails, that is to say, to distribute the load upon a greater number of bearing points.

The centre space between the two tracks, is still available for way trains, running short distances, made up of the ordinary engines and cars, or it may be used for the repair and gravel trains of the road. For these latter, it is peculiarly apt, for the ballasting may be deposited in each track, where it is needed, instead of being wasted upon the slopes of the embankments, or in the ditches of the cuttings.

At stations in large and important towns, turnouts and branches from the narrow tracks may be constructed, upon which cars, propelled by horses, may be used, connecting the trucking operations in these towns, directly with the larger cars, at any point upon the track. I suggest these minor matters, as conveniences following directly in the wake of the construction of a road of this character. Or the two tracks may each be of the ordinary guage of 4 feet 8½ inches, and the Road is then available as a double-track railway, for ordinary trains for way business, permitting all the usual connections with ordinary roads. I have never yet heard an objection to the mechanics of the plan. The only objection made by a few individuals, is *its increased cost.*

Let me reply to this objection, by a few practical statements, and I have done.

The cars I propose to build, are about twice the size of our present cars. If provided with the same kind of seats, and no better or more luxurious accommodations, they will certainly contain twice as many passengers.

Having twice the number of rails and bearing-points under them, we may load them twice as heavily, and may we not as cheaply construct the one car, carrying 150 passengers, as the two cars carrying 75 each?

If we reflect a moment, we must decide, that the same capacity would be obtained for a less cost, in the large cars, than in the smaller. The increase is principally in the width. The same sides, and the same number of windows, that are required for the small car, answer for the large one.

So is it in the freight cars. If twice the size, and costing twice as much per car, it is sufficient to assert that they carry twice the load.

Suppose the engines each cost twice as much as the ordinary engine, they also have twice the capacity.

For an equal amount of traffic then, the equipment cannot possibly cost any more upon this, than upon any road.

I am prepared, not only to demonstrate that the equipment for such a Road would cost less in proportion to its capacity than the equipment of ordinary Roads, but that the proportion of dead weight to useful load carried would be reduced at least 20 per cent. in passenger cars, and 25 per cent. in freight cars. The economy of having the net load as great a proportion as possible of the gross load can hardly be realized by one who has not fully examined the subject.

There would be the extra cost of two rails, with the chairs and spikes, and the labor of laying them. Estimating these at 80 tons per mile, at present rates, and this additional track might cost $5,000 per mile. The additional width of road-bed would be about $5,000 per mile, upon an average road, making a total extra cost of $10,000 per mile only, while quadrupling its capacity. I cannot consider this objection as being worthy of any serious consideration, for once demonstrated, that by this plan, the results I claim can be obtained, and that New York and Washington can be brought within 3 or 4 hours of each other, or that the Mississippi River and the Pacific Ocean, can be brought within twenty-four hours, and, I say, *the magnificence of such an accomplishment, will warrant almost any expenditure.* Those who admit the feasibility of the plan, and yet object, on the ground of this comparatively trivial increase of cost, might, with equal propriety, object to the construction of our present railways, because they cost more than turnpike roads.

Safe, comfortable, speedy, and cheap locomotion is the grand idea of the age. Notwithstanding the vast improvements which have been made within the present century in the means of transporting passengers, produce and merchandise, and the facilities now offered for a speedy interchange of commodities over almost the entire civilized world, it cannot for a moment be supposed that our past progress has brought us to a point beyond which there is no improvement. On the contrary, the past is rather to be taken as a criterion by which to judge of the probable progress of the future. In view of the early and certain commencement of one or more Railroads from the Mississippi river to the Pacific ocean, and a new and vast system of roads in our Western territory, branching from and dependant upon the former as trunk lines, it may be considered of the utmost importance that any improvement in speed, safety, and capacity which our past experience has suggested should be fairly considered and fairly tried before such progress has been made in the constructon of these lines as would forbid the idea of change. It must be manifest to the most common perception, that for a work of such magnitude, some comprehensive plan giving greatly increased speed and safety as well as comfort and capacity is in fact an actual necessity. The ordinary road in use with all its delays and contingencies, its cramped and limited accommodations, it fatigues, and discomforts may be submitted to for short distances, but something more is required for a line running 2000 miles through a country that for some years yet must be comparatively a wilderness. Passengers must have better and more luxurious accommodations; and must be able to eat as well as sleep. Merchandise and produce must be carried in greater masses, must be forwarded more rapidly and certainly, and the risk of accident and delay must be lessened. Both in a political and a commercial, as well as social view, not merely a road is needed here, but a *great* road. The plan herein described has been designed with particular reference to *this* purpose, and it is believed that by its adoption and construction, passengers may be transported from the Mississippi river to the Pacific ocean in from twenty-four to thirty hours, with certainty and safety, and with no greater inconvenience and fatigue than would be experienced in any journey requiring the same time upon our most comfortable steamers.

The increased speed, capacity and certainty obtained by this plan, notwithstanding its increased cost, must have an important bearing upon the question of time necessary to construct the road.

This is not limited so much by any particular difficulties in the grading of the road bed, and its preparation for the rails, as by the laying of the track. The materials for this must be transported from its termini, and the contingencies attendant upon this transportation over any new road with incomplete and imperfect regulations, without frequent or convenient stations, without assistance in case of accident, except at long intervals, always delay and embarrass this portion of the work. If these difficulties occur upon short lines, how must they multiply upon a line from the Mississippi to the Pacific.

But if materials and supplies for the work, as it progresses, can be forwarded in larger quantities, with fewer trains, with twice the facility and dispatch, and without the risks and contingencies incurred upon ordinary roads, there can be no question but that the road can be constructed in a correspondingly less time. It does not follow that because the speed is increased and the accommodations and comforts of travellers improved, that the cost of transport must necessarily increase. Look back but a few years, and we find our roads built more expensively and permanently, the speed of our trains doubled, our cars enlarged, our accommodations improved, and yet the cost of transport decreased.

The very means by which one result has been obtained, have accomplished the other. Why should the rule stop now?—when up to this time every enlargement of power and capacity has decreased the cost. Witness, not only our railroads, but our steamers and canals.

Our past experience in Railroad transportation has determined precisely the conditions necessary to prolong the working of the rule, and I submit the foregoing combination as embodying all these conditions in the full confidence that the more it is examined and criticised, the more certainly will it inspire confidence in its practicability.

A. P. Robinson.
Civil Engineer.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bon is fall due at different periods.

American Railroad Journal.

Saturday, April 19, 1862.

Share and Money Market.

Communication between New York and Washington.

We trust the article in another column upon the subject of railway communication between New York and Washington will be attentively perused.

The importance of the highest capacity possible upon this route is beyond question.

This article enters into the mechanics of the plan suggested, in so popular a manner that a layman may understand it, and in view of the new impetus which the close of this unhappy war will give to every work of internal improvement, and particularly to the project of a railway to the Pacific, we hope the plan will be carefully examined. If such results can be accomplished by what seems to be so simple a mechanical arrangement, we shall have made a new advance not second to those made when the steam engine and telegraph were invented.

A mail from Washington to New York in three hours, or from San Francisco to St. Louis in twenty-four, would certainly be one of the most magnificent accomplishments of this or any other age, and we believe the present generation will yet see its realization.

Cincinnati, Hamilton and Dayton Railroad.

The following is an approximate statement of earnings, expenses, etc., of this road for the year ending March 31, 1862:

Gross earnings		$638,651 16
Transportation expenses.	$315,372 15	
Interest on bonds	95,030 84	
Taxes	12,636 40	423,039 39
Net earnings		$215,811 77
Out of which two dividends have been declared, as follows:		
For six months ending Sept. 30, 1861, 3½ per cent	$75,453 00	
For six months ending March 31, 1862, 4 per ct.	86,232 00	161,685 00
Leaving a surplus for the year of		$58,926 77

Erie Railway.

AGGREGATE EARNINGS FOR SIX MONTHS.

	1859 60.	1860-1.	1861-2.
October	$473,775	$585,598	$722,362
November	499,427	554,532	734,826
December	409,131	404,276	708,136
January	336,391	404,508	695,607
February	303,279	391,932	608,080
March	426,470	458,560	636,615
Total	$2,448,473	$2,799,406	$4,100,576

The earnings of the current six months of the fiscal year, it will be seen, show an increase of $1,300,000 on the same period of the previous year, and the gain, in consequence of the higher rates obtained has been made without any important increase in expenses. The above earnings are at the rate of $8,000,000 per annum, while during the past three years, on an average receipt of five millions and a half, the net earnings have been equal to a dividend on the Preferred stock, could they have been devoted to that purpose. The road, it is understood, is being operated at a cost of $400,000 per month, which leaves $1,700,000 profit on the past six months, which is nearly 5 per cent. on the whole general account of the road including common stock.

Pavonia Ferry and Erie Railway.

We had the pleasure of attending on Saturday last by invitation of Nathaniel Marsh, Esq., a trial trip of the new steamer Pavonia, just completed, for the Pavonia ferry. She is 200 feet long and 63 feet wide over all. The hull was constructed by Burtis of Red Hook and the engines by Murphy & Co. of New York. No pains have been spared to construct a staunch and commodious boat, in every respect in keeping with all the other appointments of the new terminus of this railway. Very little attention has been given to mere show but every detail shows a due regard to correct taste combined with the highest degree of accommodation of which such a steamer is susceptible.

The hour of 12 o'clock being the time appointed for the start found everything in readiness and the Pavonia started for her trip with a company of about 150 on board, all prepared to enjoy the delightful day, and the host of good things provided. She was headed for the narrows, when just opposite Governor's Island, the new Staten Island Steamer Clifton rounded to along side for a little trial of speed, and shooting a head led the way to her destination. With a moment's stop to report our object to the U. S. Revenue Cutter, stationed at the Narrows, we run down opposite Coney Island. We then turned passing through Buttermilk Channel, ran up the East river as far as Blackwell's Island, stopping occasionally to permit the invited guests to view the fortifications at the Narrows, and the new Iron clad steamer, Galena, at Green Point. Then back around the Battery to the slip at the foot of Chambers street. The whole trip occupied about three hours and was replete with enjoyment to all on board. The steamer performed admirably, the collation was excellent, the speeches and sentiments by the gentlemen present were enthusiastically received, and the services of the gentlemen who have so successfully managed the affairs of this road through its days of despondency, and brought order and prosperity out of chaos and adversity, were handsomely recognized and appropriately complimented.

The excursion was entirely successful. The new and enlarged accommodations afforded by this boat add no little to the splendid arrangements of the ferry, and to the new terminus of the Erie Railway, of which the ferry is an important part.

Ohio State Debt.

In accordance with the act recently passed by the Legislature, authorizing the funding of the public debt of Ohio, which was redeemable at the pleasure of the State after the 1st of January, 1861, the Commissioners of the sinking fund will issue new stock, redeemable in the city of New York at the pleasure of the State after the 30th of June, 1881, with interest at the rate of 6 per cent. per annum, payable semi-annually the first of January and July, in the city of New York.

To entitle holders to the exchange provided for in the 4th section of the act, the old certificates must be surrendered at the office of the Commissioners in the city of Columbus, or at the agency of the State, No. 25 William street, New York, on or before the 27th day of May, 1862, with the necessary authority to make the exchange. The following is a copy of the act:

SECTION 1. *Be it enacted by the General Assembly of the State of Ohio.* That the Commissioners of the sinking fund be, and they are hereby authorized, empowered, and required, to make and issue, in due form of law, certificates of the funded debt of the State, of such numbers and amount as shall be sufficient to redeem so much of the said debt as became payable on Jan. 1, 1861, and thereafter redeemable at the pleasure of the State, which remains unredeemed. Such certificates shall be made redeemable and payable at such times after being issued, not beyond the 1st day of January, 1882, as in the judgment of said Commissioners may be most convenient and advantageous for the final redemption and payment of the principal, and of the payment of the interest thereon, by the State. The rate of interest, not exceeding six per cent. shall be clearly expressed on the face of each certificate. The faith of the State of Ohio is hereby irrevocably pledged that the value of the certificates of the funded debt hereby authorized to be issued, shall in nowise be impaired or diminished by any enactment or authority of this State.

SEC. 2. All or any of such certificates of the funded debt of this State, herein authorized and described, may be made and issued as a domestic debt, the principal and interest thereof to be payable at the Treasury of the State; or as a foreign debt, the principal and interest of which shall be payable at the office of the agency of the State in the City of New York, and at no other place or places whatever. The certificates so issued as a domestic debt shall be issued and made transferable on the books of said Commissioners, at their office at the seat of government; the certificates issued as a foreign debt shall be transferred on the books of the Commissioners in manner prescribed by law.

SEC. 3. The interest of all such certificates issued as a domestic debt as aforesaid shall be made payable semi-annually, on the first of February and first of August in each year after the issuing thereof, until the final redemption and payment of the principal. The interest on all such certificates as shall be issued as a foreign debt shall be made payable semi-annually, on the first day of January and the first day of July in each year after the issuing of the same, until final redemption and payment of the principal thereof.

SEC. 4. The Commissioners of the sinking fund may, if in their opinion it should be most advisable for the interest of the State, receive from the holder of any portion of the certificates of the public debt of this State, payable Jan. 1, 1861, as aforesaid, at any time, a surrender of the same to the said Commissioners, and deliver in lieu thereof to said holder a certificate of an equal amount of the funded debt authorized by this act. *Provided*, That any holder of any portion of said certificates of the public debt aforesaid, may, at any time within sixty days after the passage of this act, at their option, surrender the same to the Commissioners aforesaid, and receive in lieu thereof a certificate of an equal amount of the funded debt authorized by this act; and said Commissioners shall make the necessary equalization, transfers, registers, and cancellation, with the necessary accounts and registers of the issue and transfers, payment of interest, and final payment and redemption of the principal of said certificates on their books.

SEC. 5. If, in the opinion of the Commissioners of the sinking fund, it should be most advisable for the interest of the State to offer all or any of said certificates aforesaid, of the public debt of the State aforesaid, unapplied by the proviso of the fourth section of this act, for sale, the Commissioners, in conducting said sale, and in all matters incident thereto, shall be governed by the applicable provisions of the act entitled "an act to provide for the final payment and redemption of the public debt of the State of Ohio," passed March 26, 1860, both as to the power and manner of the same, provided no such sale shall be made for less than par; and the proceeds of the sale of said certificates of the funded debt aforesaid, issued under this act, shall be applied to the redemption and payment of the public debt of the State aforesaid, which was payable the first of January aforesaid, and to no other purpose whatever.

SEC. 6. This act shall take effect and be in force from and after its passage.

The loan of 1860 is some $6,000,000.

Report of the Nova Scotia Railway.

The annual report of Hon. J. McCully, Commissioner of Railways in the Province of Nova Scotia, shows the business of that line, constructed by the Government, to have been in 1861 as follows:

Passengers	$56,884 56
Horse-wagon traffic	11,930 67
Freight traffic	47,212 95
Miscellaneous	4,889 48
Total	$120,917 66
Receipts for 1860	116,742 89
Increase	$4,174 77

The working expenses for 1861 amounted to $94,114 88, against $96,472 26 the preceding year, showing a decrease of $2,357 38.

The business of last year shows a falling off in receipts from passengers to the amount of $3,985 31, against which the freight shows an improvement of $8,443 07. The total number of passengers carried was 81,359. Considering the effects of the war on travel, it is considered satisfactory that the decrease has not been greater. It is not believed that the discovery of gold has done much to stimulate business along the line.

Among the items of expenditure we find that the maintenance of way last year cost $366 56 per mile, or 29 per cent. of the gross earnings. The Commissioner observes that "roads deeply and continuously covered with snow during the winter months, as in New Brunswick and Eastern Canada, are more difficult possibly to manage; but the road-bed is far less likely to be displaced by the action of frost, and trains may more safely travel upon them at ordinary rates of speed, than where, as on the peninsula of Nova Scotia, and nearer the sea, the permanent way is frequently bare and subjected to the severe action of sudden and heavy frosts." As an illustration he refers to a frost which took place in the winter of 1860–1, in one night destroying several thousand *chairs*, besides otherwise damaging the road. The expense of renewing ties is also heavy: but it is the policy of the managers to keep the road in the highest condition. About thirteen per cent. of the gross receipts have been expended on rolling stock, which is kept in excellent condition.

The passenger revenue would have been larger last year but for the circumstance that the road was required to furnish free passes to Members of the Provincial Parliament, and to the Halifax volunteers to and from Windsor; also to transport gratuitously goods destined for the interior to the forthcoming Exhibition, and persons employed in the Commissioner's service. The fatal accidents were only two in number, in both cases caused by the indiscretion of the sufferers.

During the year a new engine house has been erected at Richmond, at a cost of $14,557 29. It has a turn table and all other conveniences. Arrangements have also been made for the purpose of constructing a telegraph along the line, and it is believed that the different stations will soon be in communication with each other over the wires —an object the more desirable as the road has but a single track at present.

From the report of Mr. Smellie, the Engineer, we learn that a new wharf, 300 feet long by 30 feet in width, has been put up at Richmond to accommodate the increasing traffic in the products of the forest at that point. The wharf is accessible by engines and cars, the rails extending along its whole length. It is so situated that 400 feet additional can be put to it at any time. Along most of the outer front of this work there is a depth of twenty feet of water at low tide. The inside has a depth of five feet and will be valuable for mooring heavy timber. The expense of this was $5,335 07. Though several sidings have been laid down near Richmond, the want of more accommodations there is still felt.

The annexed statement shows the capital account of the road:

DR.	
Amount expended, as per last report, net	$4,233,568 85
New buildings, surveys, machinery, and other expenses for the year	35,147 81
	$4,268,716 66
Less per credit account	1,400 03
	$4,267,316 63
Balance	311 64
	$4,267,628 27
CR.	
Cash received from Receiver General to Dec. 31, 1860	$4,233,431 35
Do. for 1861	34,196 92
	$4,267,628 27

Terre Haute, Alton and St. Louis Railroad.

The sale, made under decree of the United States Court, of the Terre Haute, Alton and St. Louis Railroad to the Committee purchasing on account of the assenting stock and bondholders, has been confirmed by the Court. A new Company will be now formed; the second overdue coupons on the first mortgage bonds will be paid; and the balance of the overdue coupons on all the issues funded, and new securities issued in pursuance of the agreement of all parties in interest.

This will give to the holders as follows: About $6,000 new first mortgage bonds for $5,000 of the old issue and overdue interest; about $8,000 new second mortgage bonds for $5,000 of the old issue and interest; about $1,400 Preferred stock for $1,000 of the old third mortgage bonds, and 50 per cent of new stock to old stockholders. The road bed, under the management of Mr. Griswold, agent for the Receivers, is represented as having been put in first-rate condition.

Railroad Earnings for February.

We give below the earnings of a number of our more important lines of railroad for February, compared with the same month for 1861. The per centage of increase is equal to 10 per cent.; or, if we exclude the Illinois Central the earnings of which have fallen off from no other cause but the blockade of the Mississippi River, 20 per cent. The latter is the rate for the whole country, and presents a most gratifying contrast to 1861, and shows the universal activity of our internal commerce.

The month of March compared with 1861 will also show a large increase, not so large, perhaps as in February. The falling off, whenever it has taken place, has been due to the inability of the road to dispose of the freights offered. In the city of Milwaukee, for example, the storage capacity for grain is fully exhausted. The roads, consequently, were compelled to discontinue its transportation, which accounts for the slight decrease in their traffic. The same is the case at numerous other points. On the other hand the great lines connecting the interior with the seaboard will show a rate of increase of earnings quite as large for March as for February. The prospect for the roads in the interior was never more favorable. Their earnings during the winter have been large from the immense amount of produce transported. This has already commenced moving on the lakes, and in a month more the elevators and warehouses will be cleared and in readiness to receive new supplies. There is still a large amount of the old crop in the hands of the farmers, quite enough to keep our roads fully employed till the next crop. The foreign demand is not at the present moment very active, while the consumption is very great. Foreigners understand our markets as well as we do, and it is natural they should postpone orders when they see the effect will be to depress the prices, under very large receipts. The price of exchange shows that our shipments are still large, and prices for export will undoubtedly remain at remunerating rates till the result of the next crop in Europe is known.

The increased earnings the past year have been entirely from the movement of produce. Those arising from the transportation of general merchandise and passengers, havebeen less than for the year previous. Passenger traffic is still light, but there is a gratifying increase in western bound freight, showing a revival in the consumption of merchandise. The shock of the rebellion for a time, put an end to the purchase of anything but necessaries. As apprehension is relieved, they are rapidly assuming their normal condition. We are having a civil war, while its effects are ceasing to be felt injuriously in all the Northern States. As our government proceeds in the restoration of order, commerce will assume its wonted volume; while the new direction given to a considerable portion of it, will prove a lasting advantage to the public works of the North.

RAILROAD EARNINGS FOR FEBRUARY.

Roads.	1862.	1861.	Increase.
Michigan Central	$159,688 59	$119,763 97	$39,894 62

† Decrease. Increase 10 per cent.

Railroad Earnings—Monthly.

The March earnings of the Chicago, Burlington and Quincy Railroad were as follows:

	1861.	1862.
Freight	$78,849 83	$56,336 60
Passengers	24,465 40	21,751 04
Mails and miscellan's.	3,309 67	3,971 21
Total	$106,624 90	$82,058 85

Between Chicago and Burlington—210 miles:

	1861.	1862.
Freight	$92,607 35	$67,852 71
Passengers	29,979 87	25,589 47
Mails and miscellan's.	3,673 74	4,321 21
Total	$126,260 96	$97,763 39

Between Quincy and Galesburg—100 miles:

	1861.	1862.
Freight	$21,638 97	$15,039 29
Passengers	8,916 97	7,276 38
Mails and miscellan's.	1,190 43	1,193 33
Total	$31,746 37	$23,509 00
	1861.	1862.
Aggregate, 310 miles.	$158,007 33	$121,272 39

The earnings of the Milwaukee and Prairie du Chien Railroad for March were as follows:

Passengers	$18,015 99
Freight	24,887 85
Mails and rents	4,106 33
Total	$47,009 87
Corresponding month, 1861	43,636 62
Increase	$8,373 25

Earnings for first three months, 1862:

Passengers	$46,334 67
Freight	135,056 66
Mails and rent	12,428 76
Total	$193,820 09
Corresponding quarter, 1861	141,909 89
Increase	$51,910 70

The February earnings of the Cleveland, Columbus and Cincinnati Railroad were $112,606, against $67,610 same month last year.

The earnings of the St. Louis, Alton and Chicago Railroad for the 3 months ending March 31, 1861 and 1862, were:

	1862.	1861.
Passengers	$74,963 14	$73,405 24
Freight	108,541 94	151,657 83
Sundries	10,103 78	10,450 14
Total	$193,608 86	$235,513 21
Military service	74,584 52	
Total to date	$268,193 38	$235,513 21
Increase in 1862	32,680 17	

The earnings of the Norwich and Worcester Railroad for March were as follows:

	1861.	1862.
Passengers	$7,459 37	$9,124 91
Freight	13,994 99	15,125 33
Total	$21,454 36	$24,250 24
Increase		$2,795 88

The earnings of the Erie Railway for the month of March, 1862, were: $636,615 27
Do., 1861 458,560 08
Increase. $178,055 19

Railroad Earnings—Weekly.

The earnings of the Galena and Chicago Railroad the 1st week in April, 1862, were. $21,845 00
Do., 1861 25,369 00
Decrease $3,524 00

The Chicago and Rock Island Railroad earned the 1st week in April, 1862 $17,185
Do., 1861 19,284
Decrease $2,099

The receipts of the Grand Trunk Railway of Canada for the week ending April 5, 1862, were:

15,887 passengers	$23,935 21
Mails and sundries	2,925 63
13,915 tons of freight and live stock	58,157 57
Total	$85,018 41
Corresponding week, 1861	41,475 40
Increase	$6,543 01

The traffic of the Great Western Railway of Canada for the week ending April 11, 1862, was as follows:

Passenger	$17,861 85
Freight and live stock	32,254 88
Mails and sundries	1,537 38
Total	$51,654 11
Corresponding week of last year	54,348 23
Decrease	$2,694 12

The earnings of the St. Louis, Alton and Chicago Railroad for the 1st week in April, were:

1862	$15,809 71
1861	14,412 54
Increase	$1,397 17

The earnings of the Toledo and Wabash Railroad for 1st week of April, 1862, were. $17,429 43
Do., 1861 17,366 64
Increase $62 79

The Michigan Central Railroad earned in the 1st week in April, 1862 $32,293 09
Do., 1861 36,718 02
Decrease $4,424 93

Erie Railway.

This Company have obtained from the Legislature an act allowing stock and bondholders who were shut out by the closing of the books, either by accident or otherwise, from the privileges of the new Company, to come in. The Company gives notice to the holders of the outstanding stock and unsecured bonds of the old Company, who have not come into the new organization, that, by an act of the Legislature just passed, they may surrender their certificates and bonds and take new preferred and common stock on payment of the assessment of 2½ per cent. of the par value of each share. This must be done before the 1st of July next, or they are finally cut off.

Interest and Dividends.

The Cincinnati, Hamilton and Dayton Railroad Company has declared a dividend of 4 per cent. out of the net earnings of the road for the six months ending March 31, 1861, payable May 1, at the Bank of America. The May interest on the second mortgage bonds will also be paid at that Bank.

The Central Railroad Company of New Jersey has declared a dividend of two and a half per cent., payable on the 16th inst.

Conductors: Liability of Companies for their Carelessness.

RECENT ENGLISH AND AMERICAN DECISIONS; COMPANIES RESPONSIBLE AS FOR A MALICIOUS INTENTION; DUTY OF TO SELECT RESPONSIBLE AND TRUSTWORTHY EMPLOYEES.

The following opinion has just been rendered by the Supreme Court of Pennsylvania in the case of the *Pennsylvania Railroad Company* vs. *Sarah Vandiver*. We are not in possession of the facts out of which the action arose, and therefore, can only infer them from the opinion itself, which will be found to be worthy of an attentive perusal. It reviews the most recent English decisions bearing upon the general subject of the liability of companies for the acts of their agents; these decisions overturning some of the old cases bearing upon the subject, and establishing the principles that are now considered controlling.

Eastern District. Error to the Common Pleas of Chester Co. Opinion of the Court by

READ, J.—A great deal of the difficulty originally felt in holding corporations liable for the acts of their agents within the scope of their authority, arose from the supposition that it was necessary their appointment should be under the seal of their principals. The decisions both in England and America have satifactorily disposed of this technical doubt, and it is now clearly the law, particularly with regard to what are called trading corporations, that no such evidence of authority is required. A private corporation is liable for the acts of its agents within the scope of their authority, in the same way, and it would appear in the same form as any individual person is.

"A master," says Smith in his Master and Servant, 2d ed. p. 183, "is ordinarily liable to answer in a civil suit, for the odious or wrongful acts of his servant, if those acts are done in the course of his employment in his master's service. The maxims applicable to such cases being *respondent superior*, and that before alluded to *qui facit per alium facit per se*. This rule, with some few exceptions which will hereafter be pointed out, is of universal application, whether the act of the servant be one of omission or commission, whether negligent, fraudulent or deceitful, or even if it be an act of positive malfeasance or misconduct, *if it be done in the course of his employment*, his master is responsible for it *civiliter* to third persons." At page 187, citing several English and American authorities, he says: "Actions against railway and steam packet companies also necessarily involve similar principles, as such companies can only act through the instrumentality of servants."

In the Philad. Wilmington and Baltimore R. R Co. v. Quigley, the Supreme Court of the United States held that an action on the case for a libel, could be brought against a corporation; and Mr. Justice Campbell, in delivering the opinion of the court, thus defines its liability for the acts of its agents. "With much weariness, and after close and exact scrutiny into the nature of their constitutions, have the judicial tribunals determined the legal relations which are established for the corporation by their governing body, and their agents, with natural persons with whom they are brought into contact or collision. The result of the case is, that for acts done by the agents of a corporation, either *contractu or in delicto*, in the course of its business and of their employment, the corporation is responsible as an individual is responsible under similar circumstances. At a very early period it was decided in Great Britain as well as in the United States, that actions might be maintained against corporations for torts; and instances may be found in the judicial annals of both countries, of suits for torts arising from the acts of their agents, of nearly every variety." In Moore v. Fitchburg Railroad Corporation and another, it was held that a corporation may be sued for an assault and battery committed by their servant acting under their authority. There the conductor put out a passenger who had paid his fare, and the court ruled that if the company gave the conductor the power to act according to his discretion in all such cases as should arise, and in the exercise of that discretion he wrongfully exercised the power or removed a passenger, it would be the act of the company, and they would be liable. In this case the suit was against the corporation and the conductor. The court held the joinder was right, and although the conudctor was acquitted, they would not interfere with the verdict against the company.

"The old doctrine that a corporation aggregate has no soul, and therefore is incapable of a malicious intention, has been described by Erle, C. J. as being rather quaint than substantial; and accordingly, in these days, when substance is preferred to form, and utility to quaintness, it has been held that corporations, especially those of a leading character, have souls and may therefore be guilty of malice. The number and importance of corporate bodies established for the purpose of trade in modern times, and transacting their business through the agency of servants, have rendered it necessary to relax the old rules existing on the subject, and to extend to them the maxim *respondeat superior*, as if they were private individuals; the only special limitation engrafted upon their liability being that the act complained of should be within the scope and purpose of the incorporation. Thus after being liable to an action for a false return to a mandamus, it was decided that an incorporated company might be sued for a libel contained in a message transmitted by their telegraph; the company being incorporated for the purpose (*inter alia*) of transmiting messages, and that they might also be guilty of acts maliciously committed, with a view to injure individuals or rival companies. So in Cowley v. The Mayor, &c. of Sunderland, the corporation were held liable to an action for an injury done by a wringing machine erected by them; placing them on the same footing as an individual under such circumstances.

These cases have been followed by two very important cases decided in the Courts of Exchequer and Queen's Bench, in the beginning of the last year. The first, Seymour v. Greenwood, was decided on the 22d January, 1861, and is reported in 30 Law Journal R. Exch., 189, and was affirmed in the Exchequer Chamber, id. 327.

The plaintiff was a passenger in defendant's omnibus, and was removed by the conductor, a servant of the defendant, in such a manner that the plaintiff fell into the road, and was severely injured. The allegation was that the plaintiff was drunk and refused to pay his fare, and the court thought the conductor was obeying the lawful commands of his master in removing a troublesome passenger. The conductor went into the omnibus and took the plaintiff, who was inside, by the collar with both hands, and backed himself out of the omnibus, drawing the plaintiff along with him. The plaintiff was then on the step, and the conductor on his feet in the road; and he then threw the plaintiff on to the road, to the right hand. The omnibus was stopped when he threw the plaintiff down. The plaintiff fell; the conductor did not. A Hansom cab came up in the same direction as the omnibus, and the driver tried to draw up, but something under the cab caught the plaintiff, and the cab went over his foot and struck his head at the same time. Chief Baron Pollock said: "I do not believe he intended to do any mischief, but his want of care clearly was the cause of the mischief, and therefore I think the effect of the evidence is that the servant, by carelessly executing his master's commands, caused the mischief complained of, and that is what I should have found had I been on the jury. There is no doubt that the law on this subject was once very much confused, and when McManus v. Crickett, 1 East, 107, was decided, the law had not been settled. I think the view we take of this case is quite in conformity with all the more recent decisions. Public safety and private convenience require that we should so decide; for if we were to hold that a railway is not to be responsible for the act of its servant causing damage to a third person, *unless it be an act done in the mere negligent obedience to the orders of the company, there would be no protection to the public.*"

"I have no doubt," said Baron Martin, "that if the conductor used unnecessary violence in removing the plaintiff, the master would be responsible. If by an act done by a servant within the scope of his ordinary employment, another person is injured, that person may maintain an action against the master; and the act of removing the plaintiff from the omnibus was within the scope of the conductor's ordinary employment." "The criterion is not whether the master has given the authority to do the particular act, but whether the servant does it in the ordinary course of his employment."

The plaintiff died while the rule to set aside the verdict was pending, and the court ordered the judgment to be entered in his name, *nunc pro tunc*, as of Easter term, when he was living.

In Goff v. The Great Northern Railway Co., February 13th, 1861, the written opinion of the court was delivered by Mr. Justice Blackburn, in which the prior decisions on the subject were deliberately and carefully reviewed. It was held that "a railway company, though it be a corporation, is liable in an action for false imprisonment, if that imprisonment be committed by the authority of the company; and it is not necessary that the authority should be under seal." Then as to the evidence of such authority, it was held that the doctrine enunciated by the Court of Exchequer Chamber in 1853, in Giles v. The Taff Vale Railway Co., gave the correct rule, and all prior decisions conflicting with it were considered as overruled on that point. It is not necessary to enter this question, as in the present case it was proved by the defendants that they had expressly authorized and instructed their officers or agents to put passengers out of their cars in cases like the present.

Two errors only were argued or pressed by the counsel of the plaintiffs in error. About the first alleged error that the court erroneously held the company were liable for the acts of their agents in this case, there can be no doubt that the court below were right in their exposition of the law, which is in strict conformity with the authoritative statement of the law by the latest and best authorities, and is founded upon the clearest principles of public policy and private convenience. A railway company selects its own agents at its own pleasure, and it is bound to employ none except capable, prudent and humane men. In the present case the company and its agents were all liable for the injury done the deceased.

The other error, that the court should have in-

structed the jury to find for the defendants, is not sustained, and I think the court went farther in expressing their opinion upon the evidence than I would have done; for it appears to me that there was persuasive evidence sufficient to convince a jury, that the deceased died of the wounds which he received, when his hands were forcibly removed by the agent, and he fell on the track of the road, between the rails on the ballasting. There was therefore no error committed by the court, and we do not see that the former reversal on the question of damages has materially improved the condition of the defendants, and it would hardly be their interest to have another trial.

Judgment affirmed.

Lake Superior Copper Mines.

The *Annual Review* for 1861, speaking of the Lake Superior mines, states that ingot copper underwent extraordinary fluctuations in prices last year. In the month of July the price was seventeen cents per pound, to-day holders refuse twenty-seven cents cash. The ordinary annual consumption of copper in the United States amounts to 12,000 tons. In 1860 Lake Superior produced 6,000 tons, and the rest was obtained from Canada, Tennessee and Chili. At the opening of lake navigation in 1861 the prices of American copper were very low, and considerable quantities were then shipped to Europe. For finer manufactures, it is preferred in Paris and Germany, on account of its great ductility. In the month of December last the prices of copper had advanced so much that American copper was actually reshipped from Havre to New York. Since the rise of the tariff in August last, the importation of copper has gradually declined. As the demand for this metal by the Federal government for the manufacture of articles for the army and navy has been large, and will be so for some time to come, this year will be a very prosperous one for our copper miners The shipments of copper from the Lake Superior regions in 1861 amounted to 7,400 tons; the average price was $420 per ton.

Minnesota Mining Company.

The report of the Minnesota Mining Company, read at the annual meeting held on the 19th inst., makes the following statement of the business of the year:

Amount of mineral raised.....tons.	1,798¼
Per centage yield of mineral in copper.	72.94
Value of the year's products.....	$571,815
Mining costs of products.....	308,263
Whole expenditure.....	101,291
Net earnings of the year.....	170,023
General available supply, Jan. 1.....	214,000

A semi-annual dividend for the 1st of July, as usual, will be declared in due time, after the copper still on hand is disposed of.

The reports of the Superintendent and mining captain show an important improvement in various parts of the mine since the beginning of the year, and prospects of increased monthly products henceforward.

The following officers were re-elected for the ensuing year, viz: Directors, John C. Tucker, Wm. Dodge, Wm. Pearsall, M. A. Hoppock, Wm. Hickok, C. P. Woodruff, E. C. Roberts. President, John O. Tucker. Treasurer, M. A. Hoppock. Secretary, Samuel J. W. Barry.

VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

FAIRMOUNT
ROLLING MILL.
LOTS AND BUILDINGS,
TOGETHER WITH THE
Good-Will, Machinery and Fixtures,

To close the affairs of the firm of CHARLES E. SMITH & CO.

The character and variety of the productions of this Mill are well known. It is in full operation and can be continued by the purchaser without interruption.

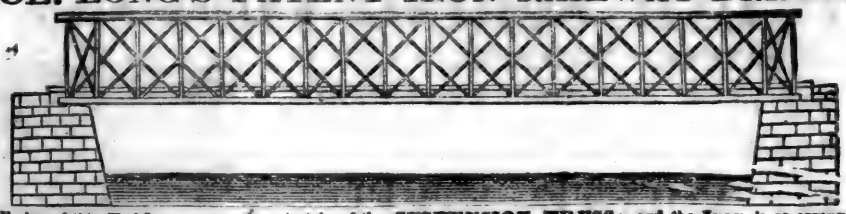
On TUESDAY, MAY 6TH, 1862, at 12 o'clock, Noon,
Will be sold, at public sale, without reserve,
AT THE PHILADELPHIA EXCHANGE,

All that lot of ground, with the IRON ROLLING MILL thereon erected, and the Engines, Furnaces, Rollers, Fixtures and Machinery therein, known as "THE FAIRMOUNT IRON WORKS," situate on the north-east side of Landing Avenue, late Spring Garden, now City of Philadelphia.

This Mill is prepared for making Bar Iron, Band Iron, Gas Tubing Iron, T and Angle Iron, Half Oval Iron, Rails, Rolled Railroad Chairs, with single or dhuble continuous lips; Shoes and Fishes for Rail Joints, Screen and Grate Bars, Railing Bars.

The assortment of Rolls comprises—
Rounds, from 1 inch to 2½ inches.
Squares, from 1 inch to 2½ inches.
Flats, widths 1½, 1⅝, 1¾, 1⅞, 1½, 2, 2½, 2¾, 2⅞, 3, 3½, 3¾, 3⅞, 4, 4½, 6, 6½, 7, 8, and 10 inches.
T Iron, 2, 2½, 3½ and 4 inches.
L Iron, 4x4, 3½x3½, 3x3, 2½x2½, 2½x2½, 2x2, 1¼x1¼, 1¼x1¼, 1¼x1¼ inches. 6x3½, 5½x3½, 4x3½, 3x3½, 5x3, 4½x3, 4x3, 2½x3 inches.
Half Oval Iron, 2, 1½ and 1¼ inches wide.
Screen and Grate Bars.
Rails, 25, 28, 50, 58, 60, 64 and 68 pounds per yard.
Street Rail, 42 pounds per yard.
Rolled Chairs, single or double lips, all sizes.
Rail Shoes, all sizes.

☞ **SALE ABSOLUTE.**



☞ The premises will be sold clear of all incumbrance.

TERMS.—Half the purchase money may remain on mortgage.

The purchaser can also have the stock, tools and other personal property at a valuation.

44 Exchange Place, New York.

Locomotive Engines.
DANFORTH, COOK & CO.,
PATERSON, N. J.,
HAVING erected an extensive Shop, with the most approved Machinery and Tools, are prepared to execute orders for the various classes of Freight and Passenger Locomotive Engines and Tenders, in the best manner and on the most favorable terms.
Also, Stationary Engines, and the various Tools suitable for furnishing Repair Shops.
The business of Machine making, heretofore carried on by Charles Danforth & Co., is continued by the present firm, and all orders will receive prompt attention.

THE
TAUNTON LOCOMOTIVE
MANUFACTURING COMPANY,
TAUNTON, MASS.,
HAVING large facilities, and having had a long experience in the business, are prepared to furnish
LOCOMOTIVES,
EITHER FOR BURNING WOOD OR COAL,
OF THE MOST APPROVED CONSTRUCTION.
ALSO ALL KINDS OF
RAILROAD MACHINERY,
STATIONARY ENGINES AND BOILERS,
SUGAR MILLS, SHAFTING, ETC.
W. W. FAIRBANKS, Agent.
HARRISON TWEED, Treas.

JACOB ROWE,
GENERAL COMMISSION MERCHANT,
Nos. 6 & 8 Broadway, and 8 Beaver St.
ORDERS received for all sizes MERCHANT BAR and RAILROAD IRON, AMERICAN and SCOTCH PIG IRON, SUPERIOR WROUGHT IRON RAILROAD CHAIRS, SPIKES, CAR WHEELS, NAILS, ETC., ETC.
OFFICE, 8 BROADWAY,
Corner Beaver st., opposite the Bowling Green. NEW YORK.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase the Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

ENGINEERING WORKS.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.				Sheet No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
2.	For Side Hill Cuts and Fills.			14.	" 20 "		1½ to 1
3.	Base 12 ft.	Slopes	1½ to 1	15.	" 24 "		¾ to 1
4.	" 14	"	1½ to 1	16.	" 24 "		1½ to 1
5.	" 15	"	¾ to 1	17.	" 25 "		1½ to 1
6.	" 15	"	1 to 1	18.	" 26 "		1½ to 1
7.	" 15	"	1½ to 1	19.	" 28 "		¾ to 1
8.	" 16	"	¾ to 1	20.	" 30 "		1 to 1
9	" 16	"	1 to 1	21.	" 30 "		1¼ to 1
10.	" 18	"	¾ to 1	22.	" 30 "		1½ to 1
11.	" 18	"	¾ to 1	23.	" 32 "		1 to 1
12.	" 18	"	1 to 1	24.	" 32 "		1¼ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, April 26, 1862.

Debt of the City of Chicago.

The debt of the City of Chicago on the 1st inst. was as follows:

Floating debt	$241,279 02
Funded debt old issues 10 per cent	4,000 00
Funded debt old issues 7 "	70,000 00
Funded debt old issues 6 "	860,000 00
Funded debt new issues 7 "	539,000 00
Total municipal debt	$1,214,279 02

At the close of the tax sale now about closed, there will be in the city treasury five-sixths of the amount necessary to pay the next July interest on funded debt raised by tax for that special purpose, and can be used for nothing else.

Municipal debt as above	$1,214,279
Sewerage bonds	922,000
Water bonds	1,133,000
Total debt	$3,269,279

There is now in the City Treasury, collected from the tax raised for that purpose, and can be used for no other, sufficient to pay the interest on sewerage bonds, due July 1st next. There will be sufficient in the Treasury shortly from water rents to pay the July interest, a large portion of the amount being already paid in.

Finances of New Brunswick.

The total revenue of New Brunswick for the year ending October 31, 1861, amounted to $699,698 99, which shows a falling off of $133,625 38, as compared with 1860. This was mainly caused by a decreased importation of dry good; though there was some diminuation on one or two other sources. The following sum may show the sources from which the revenue of last year was derived:

Railway Impost	$92,068 57
Import Duties	477,209 59
Export do	70,778 38
Casual and Territorial Revenue	13,703 00
Supreme Court Fees	3,000 00
Auction Duties	150 22
Provincial Share of Seizures	616 92
Light House Duties	25,243 80
Sick and Disabled Seamen's do.	8,999 86
Buoy and Beacon do.	2,928 65
Total	$699,698 99

Nearly three-fourths of this amount were collected at St. John. The export duties show a fair increase. The total expenditures were $783,973 67, including $207,081 for public works; $181,400, for Railways; $119,227 for Education; $58,000 for the Civil List; $48,126 for the Legislature, and $24,400 for the Post Office.

The estimated receipts for the present fiscal year are put down at $595,500, including $515,000 from imports, and $55,000 from export duties. The amount of cash that will be required to meet maturing obligations is put at $800,243. Of this a portion is in bank or the hands of agents. The total expenditures are estimated at $675,857. To supply the additional means required, it is proposed to lay an extra duty of ten cents per gallon on gin and whiskey, now fifty cents; also four cents per pound extra on green teas; five cents per gallon on rum; four cents on molasses, and twenty cents per 100 lbs. on brown sugar. It is also proposed to negotiate a loan of £30,000.

The Railway Commissioners' Report gives the receipts and expenses of the same year as follows:

From Passengers	$69,558 03
" Freight	47,700 72
" Mails and sundries	13,419 40
Total	$130,678 15

The expenses for the same period were as follows:—

For Locomotive power	$36,415 39
" Mer. and passenger cars	18,774 61
" Maintenance of way, &c	19,464 60
" General charges	19,590 92
Total	$94,245 52

Both the revenue and expenses were larger in 1861 than the preceding year; but the former in a greater degree, the net revenue last year having been $36,432, against $41,985 in 1860. During the months of January, February and March, the line did not earn enough to pay expenses. The number of passengers carried was 171,291, of whom 131,783 were first-class. The total freight transported was 33,386 tons, of 2,000 lbs each. The rolling stock has been slightly increased and now consists of 14 engines, 12 first-class passengers cars; 6 second-class cars; 4 express and baggage cars; 63 box freight, 105 platform and 40 ballast cars; also 4 snow ploughs and 19 hand cars. Mr. Boyd, the engineer, states, that the Railroad throughout its entire length is in good running order. The amount added to capital account last year was $186,839 91 of which $71,770 was paid to contractors on old claims; $22,399 for ballasting; $32,555 for locomotives, cars, &c. The total cost of the road, up to November 1st, 1861, was $4,548,564 59, or $42,116 34 per mile. The Commissioners observe that it is desirable that a connection with the water should be made at St. John. The estimated revenue for the present fiscal year is $135,800; estimated working expenses, $96,000.

The sum of $134,203 80 was expended on other public works, including $81,973 for roads and bridges, &c. $14,149 for internal navigation.

The Surveyor General's Report, the first ever issued, gives the statistics of the crown lands in that province. The amount realized last year from the sale of licenses to cut timber thereon was $12,409 42. Of lands for settlement 18,304 acres were sold for cash, and 24,479 sold on credit; the value of both being $26,319, or about sixty cents per acre on the average. During the last three years 131,100 acres have been "pre-empted" for actual settlement.

The postal receipts for 1861 amounted to $46,971 77 net, an increase of $2,436 over the year

before. The total expenditures reached $71,501 53, leaving a deficiency of $24,529 76. During the year 46 new way offices and 5 new mail routes were established, and 4 way offices were closed. The number of letters posted in the province was 1,109,202, and the number received for delivery, 753,061. Number of newspapers mailed, 4,262,961. The system of registering letters there, as in this country, is set down by the New Brunswick papers, as a complete failure.

The indebtedness of New Brunswick consists of $262,866 66 of funded, and of $727,584 26 of floating debt, against which there is to be placed the sum of $322,161 23 as assets. The railway funded debt is $4,671,523 34, and the railway floating debt, $28,800, making a total of $4,700,313, less small sums in the hands of the Messrs. Baring and other parties, reducing the amount to $4,685,407 65, which is an increase of $175,431 79, as compared with 1860. On the 31st of October last the gross appropriations for railways by the province amounted to $4,896,835 70.

Eastern (Mass.) Railroad.

We have received a copy of the 27th report of this company. In consequence of the change of the time of holding the annual meeting from July to February, the report embraces the period of six months only, viz: from June 1st to November 30th, 1860, inclusive. The earnings and receipts for the half-year were:

From passengers	$227,613 04
" freight	39,598 53
" parcel post and cars	5,807 74
" extra baggage	147 16
" U. S. Mail	4,912 00
" miscellaneous	386 00
" property accounts, rents, etc.	3,983 45
	$282,447 92

And the expenses were:

Coal, 2,410 tons	$14,065 21	
Wood, 479 cords	1,937 21	
Machine shop	926 73	
Maintenance of way	38,633 73	
Locomotive power	24,404 64	
Train expenses	29,447 59	
Office establishment	12,358 84	
Station expenses	22,985 02	
Mail expenses	662 35	
Insurance and taxes	7,880 12	
		153,301 45
Balance		$129,146 47
Rent of Grand Junction road	$5,500 00	
Interest paid and accrued	55,471 68	
		60,971 68
Net		$68,174 79
The net earnings for 6 months to Nov. 30, 1860, interest off, were		150,505 17
Decrease		$82,330 38

Compared with the corresponding period of the previous year, the total income has fallen off to the amount of $118,746 07. On the other hand, the expenses have been reduced $37,557 29. At the same time, the road and equipment has been kept in complete repair. In addition to the ordinary repairs, 10 box and 8 platform cars have been rebuilt, and 25 other box cars thoroughly overhauled, repaired and painted; 3 snow plows and several hand cars have been rebuilt, and three new hand cars built; 7 passenger cars have been repaired and painted, and one rebuilt. The engines have been kept in thorough repair; 5 or 6 of them have been thorougly overhauled, new tires put upon two, and new cylinders upon two others, and the only remaining wood burner fitted for coal, so that the entire equipment of engines is now composed of coal burners—with what satisfactory results, the diminished fuel accounts abundantly prove.

During the half-year, 217 tons of new rails, and 2,054 welded rails (equivalent to 800 tons) have been laid down. Also 34,738 sleepers, including 10,619 on the Essex road.

An iron covered building 315 feet in length, has been erected at the Boston depot, for storage room for cars, at a cost of $1,523 25.

The work of enlargement of the bridge and wharf accommodations from the pier below Causeway st., in Boston, has been completed at cost of $17,698 77. Upwards of $6,500 have been expended upon repairs of bridges and fences. The report says:

The balances due us from other roads, agents, etc., more than what were due from us to other roads, together with cash on hand, on the 30th of November, exceed the amounts of our notes payable or 'floating debt' of that date. These balances as is well known, fluctuate from month to month. In addition, we have notes receivable, well secured, to the amount of $28,866 25; also bonds purchased to the amount of $58,792 02, consisting of our own bonds and bonds of the Grand Junction Railroad and Depot Company with our guaranty due in 1862. Also, coal, iron, and other materials, on hand and paid for, to the amount of $43,574 68. Also real estate on our main line and branches, not wanted for the use of the road, to the value of $84,375 61, besides the whole of the East Boston property.

Owing to the depression of business, caused by the war, the directors are again compelled to omit the payment of dividends.

The bonds of the Grand Junction Railroad and Depot Co., on which the Eastern Railroad Company are guarantors to the amount of $140,000, became due in March. In reference to the origin of these bonds, the report says:

When our railroad was extended into Causeway street, a joint location was made and the land jointly paid for by the two corporations, for the piece of road about two miles in length from the Salem turnpike in Chelsea to the Boston & Maine Railroad, and it was agreed that the Grand Junction Railroad and Depot Co. should build their road on one part of said location and that the Eastern Railroad Company should guaranty the bonds of the former to amount of two-thirds of the cost, having security on the road so built with the right to use the same, paying rent, until the Eastern Railroad Co. should see fit to build its road upon the other part of said location. Accordingly this corporation became guarantors of the above mentioned bonds, taking a lease and mortgage of that piece of railroad. As these bonds will not probably be paid at maturity by the Grand Junction Co. it will be necessary for us to provide for them, and take measures to foreclose the mortgage. The rent which we now pay for this piece of railroad is $11,000 a year, and hence the payment of the bonds and foreclosure of the mortgage will benefit us by the difference between the rent and the amount of interest on the bonds. If, on the contrary, the mortgage should be redeemed and the money paid back to us, it would furnish a fund sufficient, or nearly so, for the construction of our part of the road; so that in either event, that is, whether the mortgage is foreclosed or redeemed, the interest on the outlay would be less than we now pay as rent.

The method of meeting the competition of horse railroads, extending as they now do to Lynn, has received a great deal of attention, but no measures for overcoming it have been adopted.

The equipment of the road now consists of 28 locomotives; 47 passenger, 13 baggage, 155 box, 73 platform, 17 cattle, 136 coal and gravel, 23 hand, and 12 rail and stone cars; also 7 snow plows and trunks.

The construction account, or cost of road and equipment to Nov. 30, 1861, is as follows:

44.2 miles main line		$3,125,124 77
3.0 " Marblehead branch		55,843 05
13.1 " Gloucester "		338,879 71
3.8 " Salisbury "		97,189 38
8.4 " Saugus "		236,746 82
8.1 " South Reading		149,900 44
80.6 " Total Mass. road & br.		$3,985,684 17
16.6 " in New Hampshire		510,779 41
97.2 " Total cost of road		$4,496,463 58
Equipment, valued at		315,165 00
		$4,811,628 58
28,584 shares stock in Mass	$2,853,400	
4,925 " " N. H.	492,500	
		3,345,900 00
Balance		$1,465,728 58

The receipts on the South Reading branch during the half year were $10,458 85; and the expentures $8,801 83—gain $1,657 02.

The receipts on the Essex road were $25,056 65; and the expenditures $24,856 38—gain $200 27.

The receipts on the Portland, Saco and Portsmouth road were $105,949 14; expenditures $56,485 63—gain $49,483 31; dividend, 3 per cent., $45,000—surplus, $4,483 31.

The gross income of the branches for the half year were—

Gloucester branch	$25,201 75
Marblehead "	7,702 57
Salisbury "	6,148 08
Saugus "	6,893 44
Total	$45,445 84

The number of miles run by engines has been 211,916; number of passengers carried 569,992; tons of freight carried, 28,120.

The Rockport road was opened for travel on the 4th of November last, and trains have run re-

gularly over it since that date, with an amount of travel exceeding the expectations of its projectors.

President—GEORGE M. BROWN.

Directors—George M. Brown, M. Lunt, F. Haven, N. D. Chase, W. S. Dwight, H. S. Williams.

Treasurer—J. B. PARKER.

Superintendent—J. PRESCOTT.

Northern (Canada) Railway.

The following is a summary of the report of the directors of this company, for 1861, presented at the annual meeting of the proprietary held in Toronto on the 12th of February:

The directors congratulate the proprietary upon the highly satisfactory nature of the company's traffic and revenue operations during the year, and the large increase in the trade and earnings of the line. This increase has marked every item of traffic, excepting only that of through freight; but has especially resulted from the great activity of the timber trade. The reduction in the earnings on the through trade, amounting to about four per cent., has been due to the suspension of the steamboat organization between Collingwood and Chicago. Notwithstanding, however, that the regular organization of Upper Lake connections was thus temporarily dispensed with, so large has been the influx to the road of through business brought to it by independent lake craft, attracted solely by the excellence of the route, that the directors regard the through operations of the year with the highest satisfaction, as illustrating very fully the value of this as an established channel of transportation.

The gross earnings were	$410,939 91
And the total expenditure	278,968 80
Yielding a net revenue of	$131,971 11

A comparison of the gross and net earnings of the past with those of the preceding year, show an increase in the former of 23, in the latter of 82 per cent.

The accruing interest at the rate of six per cent. per annum, upon the whole issue of the company's bonds (first and second preference,) has been duly met, and provision made for dividends payable January 1, and February 1, of the current year.

The position of the net revenue account since the date of re-organization, August 1, 1859, to to December 31, 1861, is as follows:

Total net revenue		$219,801 83
Interest on deposits, etc.		1,887 38
		$221,189 21
Payments of interest accrued on bonds, discounts, stamps, etc.	$121,592 61	
Appropriation for interest payable Jan'y 1, and February 1, 1862.	65,098 60	
		186,691 21
Balance to credit of interest fund		$34,498 00
" reported Dec. 31, 1860		32,285 49
Increased credit, 1861		$2,212 51

The following is a comparative statement of the earnings and expenditures of the past with those of the two preceding years:

	1859.	1860.	1861.
Earnings	$240,044 86	$332,967 01	$410,939 91
Expenses	197,199 91	260,466 56	278,968 80
Net revenue.	$42,844 95	$72,500 45	$131,971 11

In pursuing the comparisons of the past with previous years, the following averages are obtained:

	1859.	1860.	1861.
Percentage of expenditure to gross earnings.	82 p.ct.	78¼ p.ct.	68 p.ct.
Mileage earnings per week	$49.10	$68.11	$84.07
Mileage expenditure per week	40.34	53.18	57.06
Freight tonnage of all classes:			
Through freight	28,373	36,558	25,162
Local "	63,029	88,787	120,592
	91,402	125,345	145,754
Number of passenger	78,072	91,582	100,618

It is to be observed also, that the charges on the current year represent an exceptional outlay due to the embarrassments and consequent costs arising out of simultaneous conduct of the contract works, as well also as to the improvements to permanent way on the Northern Division of the line, which it was clearly desirable to raise to the standard of the other divisions of the road under restoration.

These exceptional causes and services will cease on the completion (during the current year) of the contract works, and the Directors look with confidence for a considerable reduction in this charge against future revenue.

The Directors refer with great satisfaction to the favorable nature of the Superintendents' Report. It will be seen therefrom, that whilst the gross earnings have increased 23 per cent., the net revenue has been augmented by 82 per cent., and that the working expenditure has been reduced from 78¼ per cent. in 1860, to 68 per cent. on gross income in 1861.

The proprietary will regard this reduction in the cost of working with approval, and as an assurance that as the works and stock of the Company are brought to a condition of efficiency, revenue will be consequently relieved, and the relation of expenditure to earnings, reduced to as low a standard as is compatible with the maintenance of the property, and the successful operation of the trade of the Company.

The Directors have great pleasure in announcing that arrangements have been made and perfected for the re-establishment of through connections between Chicago, via Collingwood, and the Atlantic cities, by the organization of a full first class line of steamships on the Upper Lakes, with similar lines on Lake Ontario, and favorable connections with the Eastern Railway tributary to New York, Boston and Portland. The Directors have received the strongest assurances of a continued support to this route from all the sources of traffic, and they entered upon the through trade of the ensuing season of navigation under circumstances more favorable, and with better prospects, more encouragingly than ever before attached to this department of the Company's operations.

The Directors refer with satisfaction to the amicable relations existing between them and all neighboring railway interest; it will be their policy to further cement these relations by avoiding all injurious competition, and by inviting such harmonious co-operation as may conduce to the general protection of railway interests to mutual advantage.

There have been expended upon contract works of restoration during the year, $359,426 89, making a total contract expenditure to date of $516,842 40, and leaving an unexpended balance of the appropriation amounting to $180,185 60. These works have been proceeded with in the most satisfactory manner, as well with reference to the character of the works executed, as to the progress made, and the relations of the Company with the contractors continue to be cordial and efficient.

The report of the engineer sets forth the details of this expenditure and the works it represents. It is sufficient here to note that the permanent way has to a large extent been relaid and ballasted; 30 miles of double fencing provided; the timber structure in culverts, bridges, etc., replaced by others in stone and iron; the rolling stock largely renewed; and the class and character of the general works and plant of the company raised to efficient working and permanent condition. The expenditure of the balance of appropriation will complete the services originally contemplated.

Chicago Provision Trade.

The beef and pork-packing season in Chicago, for 1861–'62, is now closed, and the result exceeds the highest anticipations of the trade.

1855-56	28,972	1861-62	55,212
1856-57	14,987		

We present the figures of pork packing for the past season at several leading points, viz:

	Hogs.
New York	541,216
Chicago	514,118
Cincinnati	478,267
St. Louis	85,000
Louisville	80,000
Total	1,693,601

The figures above presented show that Chicago leads by 40,851 hogs, while New York leads Cincinnati 68,949, and is ahead of Chicago 27,098 All the above named places show a gain in pack

ing except Louisville, which in 1860-61 packed 198,751 hogs.—*Chicago Tribune April* 10.

Railroad Plans and Projects in Northwest Pennsylvania.

A very large portion of Pennsylvania, about one-fourth part of the whole State, bounded by the Pennsylvania Railroad and the State of New York and by the Allegheny Mountain and the State of Ohio, is still destitute of direct rail communication with the capital and the seaport of the Commonwealth. This isolation, however, which has so long sundered Pittsburg from Erie City and Erie City from Philadelphia, is soon to cease, for several new roads now in progress of construction will intersect other roads in use, and form connections which will open routes of travel southward, eastward and westward, and annex to the other sections of the State the long separated northwest triangle and west and northwest counties.

From Warren, the present terminus of its Western Division, the Philadelphia and Erie Railroad is under contract and in progress of construction to the terminus of its Eastern Division; and next year this part of the line will be completed, whereupon from Erie City to Philadelphia, and her neighbors on tide-water, the communication by rail will be direct, continuous and unbroken.

From Corrys, the point on the Philadelphia and Erie Railroad to which the Atlantic and Great Western wide-gauge route is now open, the prospect is, that the wide gauge will soon be carried to and across the Ohio State line to a connection with the Cleveland and Mahoning Railroad at or near Warren, whence a third rail is to be laid down to carry the wide gauge to Cleveland.

The Pittsburg and Erie Railroad, which commences at Girard on the Lake Shore Railroad, 16 miles west of Erie City, pursues thence a southern course through the border counties of Erie, Crawford, Mercer and Lawrence, terminating at New Castle, 80 miles from Girard; more than half of this road is in operation, and the necessary financial arrangements to assure its undelayed completion, will undoubtedly be entered into, because the Erie and Buffalo R. R. interest, which has already invested in the work $700,000 *know and appreciate the fact* that New Castle is the fitting point at which to terminate the Pittsburg and Erie road, in a junction with other roads divergent from that prospective focus.

Events foreshadowed, and which are receiving movement and momentum from surrounding and other causes, make it plain to see that, considerations of public policy and paramount utility will hereafter combine various railroad interests at New Castle, *as a common point*. Thus the interests of the city of Cleveland are identified with the extension of the Cleveland and Mahoning Railroad to New Castle, to which place it was originally projected, there to connect with the West Pennsylvania Railroad, thereby to open from Cleveland a rail route of uniform gauge and close connections to the cities of Philadelphia and Baltimore, and also to New York. Cleveland has now connection with Boston, New York, Chicago, Cincinnati, Pittsburgh; but it is only via New Castle, Butler and Freeport that Cleveland can secure a direct, uniform and eligible rail communication with Philadelphia and Baltimore; and with public opinion brought to bear in favor of this route, measures looking to its completion will be originated out of the interests of Cleveland and the public merits of the work.

The West Pennsylvania road, completed first to Butler and thence afterward to New Castle, would, at its final terminus, find two important co-operating feeder roads in the Cleveland and Mahoning Railroad and in the Pittsburg and Erie Railroad, which latter road would bring to it, from a rich and populous portion of this State, a very considerable traffic. And if, from the most eligible point on the West Pennsylvania Railroad a link were built to the Ohio river at Rochester, whence two important roads now diverge, new combinations would ensue, followed by important results to the Cleveland and Pittsburg road, the Steubenville road, and Ohio Central road; for, thereby these three important roads, and their respective connections, would be put into independent communication with the Pennsylvania Railroad, over a route north of Pittsburg. By such a link, too, the troubles of the routes across the Pan Handle of Virginia and the questions of Ohio river bridges at Wheeling and Steubenville, and of a Monongahela river bridge at Pittsburg, would all be shunned.

The route of the West Pennsylvania Railroad, for more than half its length, is common to Rochester near the Ohio confluence of the Ohio and Beaver rivers and to New Castle at the confluence of the Chenango and Neshanock. Moreover, from Rochester via Freeport to the Pennsylvania Railroad at the Blairsville Junction, the distance would be shorter than is the existing route between the same points via Pittsburg, which is 80 miles, Blairsville Junction being 54 miles east of Pittsburg, and Rochester 26 miles west of Pittsburg.

From New Castle down Beaver Valley a road is projected to connect with the Pittsburg, Fort Wayne and Chicago Railroad, and thereby open a direct route to Pittsburg, and also form connections down the Ohio river and with roads leading west. Thus Girard on Lake Erie and Rochester on the Ohio river will be the junction and termini of an Ohio river and Lake Erie rail route, through the belt of border counties abutting the meridian line which is the west boundary of the State.

From the oil well region to the nearest roads leading eastward to the great markets, there are several projected railroads; but we must defer particulars for a future article; nor have we room for other enterprises (not touched on) in the northwest counties. Our aim has been, on this occasion, to note the rail lines in actual progress of construction in the northwest counties, and to indicate their direction and tendencies. Within two years from this time the entire northwest section of the State will be intersected with rail lines coursed by speeding trains, and from the capital and centre of the State cheap and expeditious communication will be opened to all the border ports, and all the important intermediate trade points in the Commonwealth.—*U. S. R. R. and Mining Register.*

Construction of Railroads--The Law in Reference to the Interruption of Streams.

WHEN THE CURRENT OF A STREAM IS INTERFERRED WITH WITHOUT LEGISLATIVE AUTHORITY, THE PARTIES ARE LIABLE TO PERSONS INJURED, WITHOUT REGARD TO NEGLIGENCE; BUT WHEN MADE IN PURSUANCE OF LEGISLATIVE AUTHORITY THEY ARE ONLY LIABLE FOR INJURY RESULTING FROM WANT OF PROPER CARE AND SKILL.

The case of Bellinger *vs.* The New York Central Railroad, reported in the last volume of the New York Court of Appeals Reports, was an action commenced against the company in 1855. It was brought to recover damages for "negligently, wrongfully, and improperly" constructing the company's road across the West Canada Creek, and across the lowlands forming the valley of the creek, in the town of Herkimer, by means of which the plaintiff's lands in the valley on the east side of the creek were repeatedly overflowed, the soil, fences and manure washed away, and large quantities of rubbish left upon the ground, &c. The West Canada Creek runs in a Southerly direction, discharging its waters into the Mohawk River in the town of Herkimer. The general direction of the railroad at this place is east and west, and it crosses the creek in that town at a place easterly of the village of Herkimer, and runs on an embankment over the low land between the creek and the village, about one hundred and fifty rods. The bridge on which the track runs over the creek is nearly five hundred feet long. It replaces a former bridge of the company which was carried off in 1851. There is a space of eighty-two feet wide in the embankment, for water to pass in the time of flood, over which space the track passes on what is called a flood-bridge. In other parts the embankment is from four to twelve feet high, and there is a culvert four or five feet high near the west end of the embankment. The plaintiffs land which was alleged to have been injured, is on the east side of the creek below the railroad track, and between it and the Mohawk River. It was shown that the railroad company had acquired title to the land occupied by the track of its road, and that the plaintiff had received payment for the value of his portion of that land, and for his damages in consequence of the road having been laid out through it.

The plaintiff's land was not overflowed periodically, but only in times of unusually freshets, occurring in the winter and spring, when the flow of water is obstructed by the ice which has broken up and lodged in the channel and openings. Such a freshet occurred in the winter of 1842-3, carrying off the flood bridge, and in 1851 when the turnpike and railroad bridges, spaning the creek were carried off, and again in 1853. On each of these occasions the plaintiff's land was covered with ice and strewed with floodwood and rubbish; the soil was washed off in places, and the fences carried away. There was some conflicting testimony as to the effect of the obstruction upon the embankment, west of the creek, and in causing the plaintiff's lands to be overflowed.

The defendant's counsel moved for a nonsuit, on the ground that it had not been shown that there was any want of care or skill in the construction of the railroad or bridges, or that the injury to the plaintiff's land was owing to any such want of care and skill on the part of the railroad company. The motion was denied. He also asked one Gilbert, the engineer who had been in charge of that portion of the road for the previous twenty-five years, the following question, "Were the embankment and bridges carefully and skillfully constructed, with reference to this creek?" The plaintiff's counsel objected to this question as incompetent, and it was excluded by the judge and the defendant's counsel excepted.

A verdict and a judgment was rendered for the plaintiff for $525 75; the judgment was affirmed at the General Term, and an appeal then taken to the Court of Appeals, who now hold that the judge erred in excluding the question as to the care and skill used in the construction of the embankment and therefore ordered a new trial. The following is taken from that portion of the opinion of the court bearing upon this question; and embodies the reasons and principles of law which led to this decision.

DENIO, J.—But the judge refused to allow the inquiry to be made of a witness, who was an engineer by profession, and who was familiar with the locality and with the defendant's structures, whether the embankment and the bridges were carefully and skillfully constructed with reference to the creek. It does not appear upon what ground the question was rejected by the justice who presided at the trial. But the opinion of the court given at the General Term upon the appeal there, puts the right to recover upon the sole question whether the propulsion of the ice and water upon the plaintiff's land, during the freshets

referred to, was occasioned by the erection of the defendant's structures. If this is the true question, the inquiry made of the engineer Gilbert, was immaterial; for, whatever skill and judgment may have been applied to the construction of the road, and though no fault whatever was imputable to the defendants or their servants, they were still, upon this doctrine, responsible for the damages, provided they would not have arisen if the railroad had not been constructed. This as we have seen, was not the theory upon which the case was given to the jury at the circuit; and, hence, the opinion of the General Term consistently declares that the charge was more favorable to the defendants than the law would warrant. The General Term proceed to state, in effect, that the defendants, though authorized by law to construct the road on the course on which it is located, are still liable for any interference with the water, either that which would ordinarily flow in the stream, or that which is superinduced by a freshet, to the prejudice of a third person, to the same extent that a private individual would be liable for similar acts upon his own land. If this be a correct statement of the law, the question of negligence, or want of due skill and judgment, in the construction of the road, was not in the case; for I suppose that the maxim, *aqua currit et debet currere* absolutely prohibits any individual from interfering with the natural flow of water to the prejudice of another riparian owner, upon any pretence, and subjects him to damages at the suit of any party injured, without regard to any question of negligence or want of care. If one chooses of his own authority to interfere with a water course, even upon his own land, he, as a general rule, does it at his peril, as respects other riparian owners above or below. But the rule is different where one acts under the authority of law. There he has the sanction of the State for what he does, and, unless he commits a fault in the manner of doing it, he is completely justified. This is, of course, to be understood as limited to cases in which the Legislature has the constitutional power to act. If, therefore, a corporation or an officer should be authorized by a statute to take the property of individuals for any purpose, however public or generally beneficial, without compensation, or for a private use making compensation, the pretended authority would be wholly void, and, of course, could afford no protection to any one. But this limitation has no application to cases where property is not taken, but only subjected to damages consequential upon some act done by the State or pursuant to its authority. Some doubt at one time existed as to this distinction; but the question was directly presented in Radcliff's Executors *vs.* The Mayor &c., of Brooklyn; and it was there determined, by the unanimous judgment of the court, that, where persons are authorized by the Legislature to perform acts in which the public are interested such as grading, leveling and improving streets and highways and the like, and they act with proper care and prudence, they are not answerable for the consequential damages which may be sustained by those who own lands bounded by the street or highway. The doctrine is equally applicable to the construction of a railroad by a private corporation, for the enterprise is considered a public one, and the authority is conferred for a public benefit. It is on this account that such corporations are authorized to exercise the right of eminent domain, which could not be conferred in respect to any other than a public undertaking. * * * * * *

In my opinion the passage of the creek and valley by the railroad called for the exercise of engineering skill and judgment of a high order. The character of the creek and its habits (if that expression may be used) should have been investigated, and especially its liability to be broken up by a thaw in the winter, when covered with thick ice. It is possible that any embankment across the valley, even when furnished with the full amount of openings which could be left consistently with laying a rail tract, would modify to some extent, the action of the water upon the ice in the case of a winter flood. While I have been engaged in examining the case, the streams in the vicinity of this road have been opened by a spring flood, and the track has been covered for a considerable distance by ice and debris, so that the trains have been stopped for a considerable time. Whether it was practically possible to have fixed the grade so that this would not have happened, can only be determined by the judgment of men skilled in such matters. The defendants, as the judge at the trial very properly said, were not insurers. But they were authorized to build the railroad at the place where they did build it; and if, necessarily and in spite of all reasonable safe guards and precautions in constructing the work, occasional desturbance to adjoining lands would arise from a winter freshet, it was the misfortune of the plaintiff that he had lands exposed to such occurrences.

Judgment reversed, and a new trial ordered.

Pork Packing in the West.

Pork packing this season has been unusally late, and it is but last week that it was closed at Cleveland, Toledo and Chicago; hence it is that we were compelled to delay our usual annual report thus far in the Spring. Last year we published it on the 20th of March, and the previous year in February.

RECAPITULATION.

	1860-'61.	1861-'62.
Ohio	627,132	787,439
Indiana	382,616	486,243
Illinois	509,750	841,473
Iowa	153,240	196,373
Missouri	186,176	133,637
Kentucky	251,896	144,945
Wisconsin	53,260	100,556
Tennessee	none.	182,000
Grand totals	2,164,070	2,872,666

Thus, it is seen, that the increase in number is 708,596, including Tennessee, and without this State, 526,596. This increase is equal to about 32⅝ per cent.

With reference to the increase in weight, we did not, as usual, succeed in obtaining the average weight of hogs and yield of lard per hog from all the packing points, but, still, from a sufficient number of places to give us a correct basis upon which to make our calculations, which show the following result:

	Average weight per Hog.		Yield of Lard per Hog.	
	1860-1.	186-2.	1860-1.	1861-2
Ohio, lbs	226	230	30½	34
Indiana, lbs	213¾	221½	89	30¾
Illinois, lbs	224⅓	236	34	39½
Kentucky, lbs	212	221	30⅔	30½
Missouri, lbs	206 6-7	227	30 5-12	34 1-5
Iowa, lbs	238¾	224	30 2 5	34
Wisconsin, lbs	229	260	31	35

The aggregate weight of an equal number of hogs packed at all those places from whence the average weight was furnished this year, compare with last as follows:

	Pounds.
1861-2	415,751,316
1860-1	397,856,954
Increase this season	17,894,362

This is equal to about 4½ per cent., which, added to the increase in number, swells the total increase to 37⅛ per cent., equal to 803,410 hogs.

The yield of lard has been large, unusually so, in many cases, owing to the fact that at quite a large number of places a great portion of the sides were rendered into lard. The yield of lard per hog, last season, was 32 lbs., and this season it was 34 lbs., showing an increase of 2 lbs. per hog. Taking the whole number of hogs packed each season, as given, the total yield of lard would compare as follows:

	Pounds.
1861-2	97,649,641
1860-1	69,310,240
Increase this season	28,339,404

—*Cin. Price Current, April* 16.

Railroad Earnings--Weekly.

The earnings of the Galena and Chicago Railroad the 2d week in April, 1862, were $19,931 93
Do., 1861 22,351 70
Decrease $2,419 77

The earnings of the Toledo and Wabash Railroad for 2d week of April, 1862, were $18,568 88
Do., 1861 17,412 08
Increase $1,156 80

The Michigan Central Railroad earned in the 2d week in April, 1862 $36,717 40
Do., 1861 35,772 81
Decrease $944 59

The earnings of the Cleveland and Toledo Railroad for the 2d week in April, 1862, were $20 298
Do., 1861 20,974
Decrease $676

The Chicago and Rock Island Railroad earned the 2d week in April, 1862 $15,492
Do., 1861 15,618
Decrease $126

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 1st week of April 1862, were $8,850 33
Corresponding week, 1861 9,151 30
Decrease $300 97

The traffic of the Great Western Railway of Canada for the week ending April 18, 1862, was as follows:

Passenger	$16,753 25
Freight and live stock	31,463 51
Mails and sundries	1,347 53
Total	$49,564 29
Corresponding week of last year	48,520 98
Increase	$1,043 31

The earnings of the Milwaukee and Prairie du Chien Railroad in the 2d week of March, 1862, were:

From passengers	$3,097 49
" freight	5,545 61
" mails and rent	1,015 94
Total	$9,659 04
Do., 1861	8,109 35
Increase	$1,549 69

Pork Packing in Cincinnati.

The following table shows the number of hogs packed in Cincinnati, each season, for the last thirty years:—

Years.	No.	Years.	No.
1833	85,000	1848	475,000
1834	123,000	1849	410,000
1835	162,000	1850	393,000
1836	123,000	1851	334,000
1837	103,000	1852	352,000
1838	182,000	1853	361,000
1839	190,000	1854	421,000
1840	95,000	1855	355,786
1841	160,000	1856	405,396
1842	220,000	1857	344,512
1843	250,000	1858	346,677
1844	240,000	1859	382,826
1845	196,000	1860	434,499
1846	265,000	1861	433,799
1847	250,000	1862	473,267

Appreciation of Government Securities.

Although the tendency of the securities of government have been steadily, though gradually upward, we do not look forward to an advance to the rates which they maintained for so many years, till the result of the rebellion is distinctly seen, for two reasons—the uncertainty which exists as to the amount of bonds which may have to be issued, and the unwillingness which naturally prevails to invest, till the result of the contest is proved to a demonstration. No matter how probable this may be, there is always a large class who will await the event. Still there is every reason to expect a gradually appreciation, to keep pace with the successes of our arms, and with the increasing supply of money.

We assume what no one now denies, the speedy and complete triumph of government. This triumph will be followed by a greater degree of confidence in it than has ever yet been felt, as a strength which before was only assumed, will have been fully proved. Such demonstration is the basis of all confidence in political organizations. With regard to money, the rebellion so far has excited no tendency to put up rates—on the other hand it was never more abundant than at the present moment. A debt of $1,000,000,000 will not prove an enormous burden; nor is it likely to make money scarce during the process of its creation. The war we are now waging is in many respects unlike any other of modern times. The expenditures are made among our own people, and are drawn much more largely against accumulations in the future, than in the past. They are an additional stimulus to industry and the employment of capital, and with such stimulus our people can readily increase by hundreds of millions, the value of the yearly products of their industry.

The large amount of debt created, assuming it not to be excessive, will ultimately have the effect to increase instead of reduce its market value. Every one will become a holder of it, and all will be equally interest in maintaining its price. As the securities of all stable governments sell at prices that produce to the purchaser the lowest rates of interest current, it is inevitable that those of the United States bearing six per cent. interest, should, in time, command a price that will not produce an interest of over four, or four and a half per cent. Such has been the experience in reference to these securities, ranging through a period of some 15 years, from the creation of the loans in 1842–3 to the reverses of 1857.

Whatever, therefore, may be the disturbing causes at present interfering with prices, there can be doubt what they must be soon after peace is restored. The low prices now prevailing shows how powerful are the present disturbing elements. These are necessarily temporary. The rates of interest in this country will gradually approach those in older countries—England for example. Money will be naturally attracted to the best securities, which must be those of government. It did well, consequently, to make the greater portion of its debt payable at pleasure after five years. Before these have elapsed it will be able in all probability, to sell four per cent. bonds at very nearly, if not quite the rates it obtained for its six per cents.—*Hallett's Financial Circular.*

Indiana State Debt.

The State of Indiana, by her Legislature, in May, 1861, appropriated in aid of the Government $2,000,000 by an issue of twenty years' 6 per cent. bonds, interest and principal payable in New York; coupons due in May and November. Under the law authorizing this issue a special tax of 5 cents on each $100 in value of the taxable property of the State has been levied, which is to be collected annually until this issue of bonds is paid or redeemed.

The amount sold to this date is	$1,608,500
Of which there have been sold and canceled by reimbursements from the Government	666,000
	$942,500
Leaving amount yet unsold	391,500
	$1,334,000

Making total debt of the State as follows:

5 per cent.	$5,322,500	00
2½ "	2,054,773	50
6 "	1,334,000	00
Total	$8,711,278	50

No new debt can be created by the State, under its Constitution, except for repelling invasion, suppressing insurrection, or to provide for the public defense if hostilities be threatened.

This last loan being the only 6 per cent. debt of the State, and made payable at a given date, is thus made the preferred debt of the State; and with the ample and special annual provision made for its payment, principal and interest, no more desirable State security is offered for investment than Indiana presents.

The assessment of real and personal property in the State for 1861 is estimated by the present Auditor of State at $450,000,000.

The 7 cent taxation upon which for the year 1861, is	$315,000
Deducting for collections and delinquencies, say 20 per cent.	63,000
Leaves net	$252,000
The interest on the whole $2,000,000, if borrowed is	120,000
Leaving excess for reducing principal of the debt from revenue of 1861	132,000
And same for 1862	132,000
The 10 cent taxation, provided for the years 1863, and thereafter each year, net, would be $240,000, which would amount in seven years to	1,680,000
Making, without referring to increase of taxables or excess of general revenues above expenditures, the sum of	$1,944,000

Being, with such additions, in nine years, provision equal to the whole principal of the debt.

Applications may be made to J. J. Brown, Loan Commissioner for the State, at No. 52 Wall st., for the remaining $391,500 unsold.

Sorghum (or Chinese Sugar Cane) a Western Staple.

It seems to have been established beyond all question that the Sorghum crop will hereafter be one of the great staples of the West. From raising the amount of saccharine required for the supply of their own counties and neighborhoods, our farmers are now nearly ready to enter the market and compete with producing sections which have heretofore held almost a monopoly. It is certain the cane will grow and yield a large supply of the raw material, and at a large profit, and the farmers of Illinois and Iowa, who raised for an experiment, last season, a simple half acre, will the present year put in from five to twenty acres, and commercial importance thus pertains to the matter, out of which will be developed some more general and systematic method of refining and crystalizating, since the latter is sure to follow proper processes. We are confident that it will tempt the co-operation of capitalists to introduce new and improved methods throughout all the farming districts. One thing is necessary, that greater uniformity and more general excellence of quantity is demanded to present to the trade a fully mechantable article.

While the product of the cane was within the moderate limits of the previous seasons, it was well enough that each producer set up his own small mill and evaporating pan, precisely as in the maple sugar districts where each grower renders into sugar or syrup the yield of his own trees; but this must give place, in the enlarged era now opening, to something on a larger scale. The crop once well established, the work of refining must centre in large mills, properly located, to which the farmer brings in his cane for preparation on shares, or sold outright as raw material to the mill owner. Nothing else will prove satisfactory. The farmer cannot well take the risk or undergo the labor and trouble of preparing for market the yield of from half a score to a score of acres. Our Iowa exchanges are already discussing this matter, and it is timely. Another season will see the yield of many thousand acres needing these processes, requiring operations on a scale far beyond what has yet been reached. Unless this want is provided for, an inevitable disappointment awaits the farmers. No one not interested in some one of the many patent rights for mills and pans will insist that it shall be "every man his own refiner." The whole subject demands attention, before the season opens, and the convention of farmers will prove of great value in the elucidation of the question, and everything growing out of it.—*Chicago Tribune.*

Whitewater Canal.

We have been aware for some months past that important negotiations were in progress by which H. C. Lord, Esq., President of the Indianapolis and Cincinnati railroad, should obtain the control of the stock and debts of the Whitewater Canal Company.

The canal was to have been sold to-day, under a decree of court, but Mr. Lord having become the purchaser of a majority of stock of the Cincinnati and Whitewater Canal Company, and of the claims, amounting to several hundred thousand dollars, against it, it has virtually secured to him the ownership of said canal, and the sale of the same has been indefinitely postponed.

It is unnecessary for us to go into particulars of this purchase—suffice it that the result is likely to be the construction of a new and independent railroad from this city to Lawrenceburg, connecting there with the Indianapolis and Cincinnati railroad. Should this be effected, of which there is now in our opinion no doubt, it will be of great advantage to Cincinnati, and by bringing the Indianapolis and Cincinnati road into the heart of the city, and relieving it from its present onerous connection with the Ohio and Mississippi road, will greatly increase its business and value, as a new through line will then be formed from Cincinnati to St. Louis upon a common gauge with our Ohio roads.—*Cin. Gazette, 18th.*

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bonds fall due at different periods.

American Railroad Journal.

Saturday, April 26, 1862.

Freshets--Work for Engineers.

The unusually severe freshets, now visiting some parts of New York, New England and Lower Canada, suggest that there is much work for engineers to do in the more uneven parts of the country. As a rule it may be set down that the floods produced by the downfall of rains or the melting of snows, are becoming larger and more destructive every year. Rivers that used to take days or weeks to swell up after rains, now reach their height in hours or days. As the surface of the country gets cleared of its forests, as the tributary water courses are freed from obstructions and straightened, it is obvious that the water that formerly lodged in swamps is at once liberated. It rushes to the sea in greater volume, and more destructive effect. The damage inflicted is not merely that done to public and private works in the course of the rivers, but to agriculture, by washing from the soil some of its best ingredients. The lack of sufficient moisture is also soon felt in the uplands, and drought is more apt to supervene than formerly. If this state of things is to continue, the prospect is cheerless; for with nearly every local improvement made there is the certainty of more sudden and destructive freshets, with a corresponding loss of fertility in the soil.

To prevent these inevitable calamities, it seems to us that the several State governments or chartered companies ought to undertake the construction of large and numerous reservoirs for water at different elevations in the mountain districts. This has been done already to some extent for canal purposes; but the system which we would suggest has reference to the permanent improvement of our agriculture, as well as the prevention of great floods. For the dams thus filled should be made to part with their waters at times when the supply has run short, thus converting what is now a destroyer into a source of fertility and wealth. In the valley of the Po, in Northern Italy, such a system of works of irrigation was begun by the Savoy Princes and the Dukes of Milan several centuries ago. Scarcely an acre of that plain can be found but may be reached by some of the canals or rivers bringing down the wealth of the mountain regions lying on both sides of it. The consequence is, that valley has long been known as the garden of Europe, sustaining a population of several hundreds to the square mile, with a varied industry, an old civilization and with liberal political institutions besides. We maintain that the valleys of Connecticut and New York may be made as fertile as those of Piedmont or Lombardy, if the rich workings of the uplands, instead of being allowed to run to waste, are carefully husbanded, by the construction of reservoirs, with locks and canals in the mountain districts of the Northeastern States and Lower Canada. For this purpose the foremost talent of the country, we believe, will be put in requisition before the lapse of many years.

A Subterranean Railway in London.

A railway is now in an advanced state of construction, running about four and a half miles under the city of London. Of this distance a little over three miles will be through tunnels and the rest through open cuttings. It commences at Victoria street, in the midst of what was formerly a disreputable thoroughfare, but will soon be covered with magnificent structures for passengers and freight, it being a common centre for the Great Northern, the London, Chatham and Dover, and the Metropolitan lines. From that point it passes eastwardly to Finsbury circus, having a large number of intermediate stations, three or four of which are very handsome buildings. On the occasion of a recent trip made through a portion of its length, the air was found to be perfectly sweet and free from all unpleasantness or dampness.

The locomotives used condense their own steam and consume their own smoke, so that neither gas nor vapor is perceptible. These engines are of the kind patented by Mr. Fowler, the engineer of the road. The surface of the rails is made of steel, and the points of these are of Bessemer steel, which is now coming into use. The line is laid for two gauges and has a double track throughout. The carriages will be roomy, well ventilated and lighted with portable gas. It is expected the road will be opened about the middle of June. We are not yet advised as to its cost, but the busines awaiting it will doubtless be immense.

It deserves notice that while hundreds of thousands are being expended in building "underground" railroads in London, Mr. George Francis Train should be experiencing the horrors of a prosecution for having obstructed a broad street in the same city by a horse railway; though it does not appear that any person has lost life or limb by the innovating track. After obtaining a charter in the proper mode and setting the cars in motion, the road is now indicted as a nuisance!

Providence and Worcester Railroad.

The following gentlemen have been chosen directions of this road for the ensuing year: Earl P. Mason, President; Horatio N. Slater, James Y. Smith, Alexander De Witt, Paul Whiten, Harvey Chace, Thomas P. Shepard, Joshua Bennett, Henry Gould, Isaac Davis, Isaac H. Southwick, Edward Pearce, Duty Greene, Henry Chapin, Wm. S. Slater, John Carter Brown, Peleg W. Lippitt, Gideon L. Spencer.

South Pennsylvania Railroad.

We have received a copy of the surveys of the South Pennsylvania, or Sherman's Valley Railroad, made by Mr. James Worrall, Engineer, in 1860. The object of this line by its charter and supplements, is to find a practicable route between Harrisburg and some point on the Pittsburg and Connellsville road. From its Eastern terminus it has now first class connections with New York, Philadelphia and Baltimore. The route, as surveyed, passes through Dauphin, Perry, Juniata, Fulton and Bedford counties, if it should terminate at Bridgeport; also through Somerset and Westmorland counties, if it should join the Connellsville Railroad at West Newton, on the Youghiogheny river.

From Harrisburg the line passes the left branch of the Susquehannah for six miles northward; then crosses that river opposite to the mouth of Fishing creek, which it follows by easy gradients to its head; next it enters Sherman's Valley, and passing through Conococheague hill, it enters the well known Tuscarora Valley. Its course there is remarkably uniform, gradually ascending the mountain which separate the Potomac from the Susquehannah, and crossing the summit, though at a high elevation, without any serious impediment. After traversing that lofty table-land for a considerable distance, the line strikes the Raystown branch of the Juniata, by the aid of another short tunnel. That stream is crossed by a single span of a suspension bridge at a height of 140 feet. The road then makes for Bedford, and after re-crossing the river, again climbs the dividing ridge at moderate grades. The Western slope to Bridgeport offers a resistance of only fifty feet to the mile. Bridgeport is 135 miles from Harrisburg, and the same distance from Pittsburg.

It will be seen that by a road 21 miles longer than the Pennsylvania Railroad between the same points, a continuous line is open to Wheeling and Parkersburg, Virginia, through the Baltimore and Ohio. The difficulties in regard to graduation, curvature, bridging, &c., are much less formidable than in most of the other great East and West lines, enabling a quicker speed to be obtained and thus virtually annihilating distance.

The engineer, however, made a survey so as to strike the Connellsville road at a point further to the northwest. For this purpose he proposes to start from the summit at Wills creek and follow the Dry Ridge till it reaches the Great Allegheny. The summit of this could be passed by a tunnel. Thence it could descend the mountains by grades not exceeding 60 feet, and pass through the villages of Berlin and Somerset, striking the Connellsville Railroad at the West Newton station, 32 miles from Pittsburg and 33 from Wheeling, by a practicable route.

The latter line shows a gain of 11⅛ miles in length, as compared with the Pennsylvania Central, the whole distance from Harrisburg to West Newton being 205½ miles, and to Pittsburg, 237½ miles. At Rays Hill a branch of eight miles would give access to the south side of Broad Top, where the road would tap a field of 120 square miles of excellent coal. Iron ore is said to exist abundantly along the route, some of the excavations being through valuable deposits of it. Several mineral springs are also found contiguous to the proposed line.

The country resembles greatly, in its general outline, the red-shale region of New Jersey, having a rich soil with abundant forests. It is believed that in a moderately brief period sufficient local business would be developed to make the concern profitable, apart from all consideration of through travel and traffic. The engineer calls attention to the circumstance that the route was principally used by the aboriginal tribes whenever they had occasion to cross the mountains. For want of sufficient water, however, the State canals were constructed on lines further northward; and the first railroads built naturally followed the general courses of the canals, to accommodate the population which had been attracted to the water lines.

The cost of a railroad is estimated at $45,000 per mile—whether for a single or double track is not stated. This would give an aggregate of $6,075,000 to reach the Pittsburg and Connellsville Railroad at Bridgeport, or $9,247,500 to reach the same line at West Newton. To this should be added the cost of making a connection with Wheeling (33 miles,) bring it up to $10,732,500. The coal branch line spoken of above would require $400,000 additional.

To procure the means requisite for this work, the engineer proposes that local subscriptions be taken on the condition that the road shall go into operation. From this source he thinks two millions of dollars might be obtained. Other interests would be ready to co-operate in the undertaking, among which are mentioned the Philadelphia and Reading and the New Jersey Central Railroad Companies. Private capitalists would also take part in it, he believes, were the work once fairly under way.

Railroad Earnings--Monthly.

The following statement shows the business of the Philadelphia and Reading Railroad Company for March, 1862, compared with that of 1861:

	1861.	1861.
Rec'd from coal	$164,627 22	$128,840 00
" " merch'dise	48,996 37	37,291 30
" " travel, etc.	80,799 06	25,654 95
Total	$244,422 65	$191,266 25
Transportation, roadway, dumpage, renewal fund, and all charges	128,440 89	108,933 37
Net profit for the m'th,	$115,981 96	$82,332 88
Profit for the previous 3 months	349,289 17	257,020 59
Total net profit 4 mos.	$465,270 93	$339,353 47

The earnings of the Cleveland and Pittsburg Railroad for March, 1862, were $90,300
Do., 1861 83,408

Increase $6,892

The receipts of the Housatonic Railroad Company for the three months ending March 31st,
1862 ..... $46,847 59
1861 ..... 40,158 69

Increase $6,688 90

The receipts of the New Brunswick Railway for March were:

	1861.	1862.
Passengers	$2,918 87	$2,535 56
Freight	[illegible]	3,490 96
Mails and sundries	[illegible] 67	413 07
Total	$6,749 55	$6,439 59

Finances of the United States.

The following is an official statement, under date of April 11, 1862, of the receipts and expenditures of the United States for the quarter ending December 31, 1861, exclusive of trust funds:

RECEIPTS.

From customs	$8,309,066 47
" sales of public lands	89,658 46
" miscellaneous	172,816 22
" three years' bonds at 7 3-10 per cent	91,790,676 23
" United States notes	18,480,000 00
" sixty day Treasury notes, per act of March 2, 1861	18,600 00
" stock for the Washington and Oregon war debt	488,000 00
" loan of November 16, 1861 per act July 17 & Aug. 5, 1861	24,294,129 17
Total	$143,587,446 55

EXPENDITURES.

Civil, foreign intercourse, and miscellaneous		$4,773,406 70
Interior (pensions and Indian)		469,162 80
War		84,663,889 32
Navy		9,779,238 44
Interest on public debt, including Treasury notes	$3,738,526.36	
Payment of Treasury notes, per act of December 23, 1857	203,300.00	
Payment of Treasury notes, per act of December 17, 1860	429,000.00	
Payment of Treasury notes, per act March 2, 1861	12,430,050.00	
Reimbursement of temporary loan, per acts July & Aug. 1861	28,500,050.00	
		45,300,926 86
Total		$144,946,123 62

Finances of Philadelphia.

The total receipts of the Treasury of the city of Philadelphia, from all sources of public revenue, including the proceeds of loans, during the year 1861, were $4,888,493 27, which, with its previous balance of $380,222 42, amounted to $5,268,715 69 available assets, of which $4,783,203 66 have been expended, leaving on the first day of January $485,512 03 to its credit. Among these were $854,182 97 for warrants of dates prior to 1861, and $318,913 76 for loans which had matured. The interest paid upon the funded debt amounted to $1,184,492 19, together with $54,841 96 accrued on warrants and temporary loans. The countersigned warrants remaining unpaid are $1,099,444 52 (of which $83,997 63 were issued in previous years), besides the sum of $450,000 borrowed for temporary purposes—the whole of which indebtedness will be discharged by the outstanding taxes and the proceeds of the loan authorized for such use.

At the beginning of the year the loans of the city readily sold at a small premium, but, as national disorders became more imminent, their market value depreciated, particularly when forced into competition with a Federal loan yielding 7.30 per cent. interest. An ordinance, approved June 8th, gave authority to borrow one million of dollars, to make provision for the defence of the city and for the relief of the families of volunteers, without the usual limitation to a par value; and of such loan $498,500 have been sold as needed, at the average rate of 92.1 per cent., producing $459,690 net avails.

A further loan for the extension of the Water Works of $42,500 was enacted by ordinance of May 3d, to be borrowed at not less than par—and by ordinance of December 14th a loan of $1,200,000 was created, $117,000 thereof for the construction of Chestnut Street Bridge, and the remainder for the payment of deficiencies, without restriction of price—but no portion of either has yet been offered for negotiation.

The actual increase of the funded debt during 1861 was $608,591 24, and its present amount is stated to be $21,845,285 05, of which $328,433 12 are overdue, but have not been presented for redemption, $516,322 11 are held by the several sinking funds of the city, and $315,700 by those of the Gas Trust. The many inaccuracies in the accounts of some of the former municipalities have not been fully rectified, notwithstanding the unremitting efforts of all who have held the office of City Controller, and hence such statement of the funded debt is to be considered approximate rather than definite.

The sinking funds for the redemption of the City debt are eighteen in number—the larger known as that of the ten million loan, being applicable to the payment of the maturing liabilities of the several corporations which were merged into one debt, in pursuance of the Act of Consolidation, and the others providing respectively for the loans by which they are specially designated. The aggregate loans authorized since the consolidation, amount to $9,774,900, while $2,102,420 90 of its matured debt have during that period been extinguished, making an apparent increase of $7,672,479 10 to the funded debt. The purposes for which these loans have been created, are as follows:

Deficiencies and current liabilities	$3,429,900
Railroad subscriptions, made prior to consolidation	1,725,000
Extension of Gas works	1,450,000
Payment of matured loans	1,025,000
Defence and relief	1,000,000
Building bridges and road damages	517,000
Extension of Water works	328,000
Construction of culverts	200,000
Erection of school houses	100,000
	$9,774,900

Of these loans $2,540,100 had not been disposed of at the beginning of the current year.

The principal and interest of the loans for $1,450,000 to the Trustees of the gas works are specially secured, and with allowance for the reduction of matured indebtedness, if the loans already authorized shall be entirely negotiated, the funded debt for which provision must be made by the City will amount to $22,710,385 05.

The municipal taxes assessed in 1861 amounted to $3,080,782 06, of which $2,203,449 71 have been collected, and of the balance—after deducting $203,000 for exempt property, $90,152 80 for rural estates, and $136,969 13 for rateable allowances—$447,210 42 remain unsettled. The receipts from taxes registered for previous years were $371,745 51, beside $376,281 28 from those payable to the State.

The tolls upon the city railroads have amounted to $16,761 85, being $1,268 04 in excess of those for the previous year. Of this sum $6,259·76 have been paid into the Treasury; $5,000 have been credited to the Pennsylvania Railroad Company, under the ordinance of December 15th, 1860, for the expenses incurred by them in relaying the track in Market street, west of Eleventh, and for repairs east of that street; and the balance of $5,502 09 is yet due from that Company, subject to deductions upon the settlement of their account for work done west of the Market Street Bridge. The sum of $2,700 was appropriated by Councils, and has been fully spent in the ordinary repairs of these roads.

The following statement will show the liabilities and assets of the city of Philadelphia for 1862, also the valuation of real and personal estate, and the amount and rate of taxation required to supply the deficiency:

LIABILITIES FOR 1862.

Estimated appropriation for 1862	$4,735,999 49
Due to road damage and bridge loan	12,523 63
Outstanding warrants	1,099,444 52
Estimated discount and allowance on tax of 1862	230,000 00
Estimated deficiencies of Departments	30,000 00
For Chestnut Street Bridge	117,000 00
	$6,224,967 64

ASSETS FOR 1862.

Estimated revenue from sources other than taxes	$1,231,574 00
Due from water loan	22,194 61
" school "	1,454 67
" Chestnut St. Bridge loan.	807 80
Estimated receipts of delinquent taxes	400,000 00
Loan to pay deficiencies (if sold at par)	1,200,000 00
Cash balance in treasury Jan. 1, '62	431,539 48
	$3,287,570 56
Amount required to be raised by taxation	2,937,397 08
	$6,224,967 64
Valuation of real estate	$152,410,165 00
" " personal estate.	2,482,989 00
	$154,893,154 00

This sum, at $1 90, yields a revenue of $2,943,069 92.

Iron Railroad.

The receipts and expenses of the Iron (Ohio) Railroad for the year ending the 1st inst. were:

From freight transportation	$17,644 27
From passengers	2,344 78
From interest collected	385 19
From other receipts	39 20
Total	$20,413 44
Total expenditures	16,533 50
Net income	$3,879 94

Philadelphia City Passenger Railroads.

The following statement will show the earnings and expenses of these roads for the year 1861:

	Earnings.	Expenses.
Citizens' Passenger Railway	$108,594 52	$78,073 36
Delaware County	4,200 00	8,530 00
Frankford & Southwark	150,849 44	102,468 84
Fairmount & Arch Street	52,287 14	43,138 84
Green and Coates Streets	98,148 11	65,884 69
Girard College	58,015 62	46,621 61
Philadelphia City	83,767 73	46,166 62
Phila. and Gray's Ferry	64,877 94	42,174 34
Ridge Avenue & Manayunk	26,551 98	18,808 23
Second & Third Streets	213,646 46	143,727 64
Seventeenth and Nineteenth Streets	31,374 26	.....
Thirteenth and Fifteenth Streets	52,658 89	46,230 00
West Philadelphia	132,348 75	101,146 81

New York Savings Banks.

The principal features in the operations of the Savings Banks of this city and State for the years ending December 31, 1861 and 1862, are as follows:

	1860.	1861.
Number of institutions	71	74
Number of open accounts	300,693	300,511
Amounts due depositors.	$67,440,397	$63,083,119
Amounts deposited	34,934,271	27,439,855
Amounts withdrawn	28,308,414	33,678,073
Am't of interest received	3,682,158	3,954,724
Amount of interest credited depositors	2,834,249	3,088,921

It appears that the aggregate deposits on 1st January, 1862, were less than 1st January, 1861, by $3,367,247.

The aggregates for seven years past were as follows:

	Amount.
1st January, 1856	$36,112,764
" 1857	41,699,502
" 1858	41,422,672
" 1859	48,194,847
" 1860	58,178,160
" 1861	67,450,397
" 1862	64,083,150

The deposits and number of accounts open in the cities of New York and Brooklyn, and in the interior, were as follows on 1st January, 1862:

	Deposits.	Depositors.	Av'ge.
New York city	$45,854,025	$205,169	$218
Brooklyn	6,776,623	37,776	
Other places	12,221,502	57,566	212
	$64,083,150	$306,511	

By comparing the returns of January, 1862, with those of January, 1861, it seems that the city deposits (New York and Brooklyn) were

Diminished	$3,918,924
And the country increased	551,677
Net decrease in the State	$3,367,247

Of the eleven savings banks of this city, holding each over one million of dollars, the changes between 1st January, 1861, and 1st January, 1862, were as follows:

	Jan. 1861.	Jan. 1862.	Decrease.
	$	$	$
Bank f. Savings	10,062,616	8,821,750	1,240,866
Seamen's Sav. B.	8,922,634	8,215,686	706,948
Bowery Savings	10,294,995	9,173,083	1,121,962
Greenwich Sav'gs	3,898 339	3,402,410	495,929
Manhattan Sav'gs	2,794,934	2,676,907	118,027
Emig't Industrial	2,563,475	2,425,170	138,305
Merch'ts' Clerks'	2,103,285	1,896,247	207,038
Dry Dock Sav'gs	1,976,064	2,110,890	.....
East River Sav'gs	1,161,234	1,068,244	92,990
Broadway Sav'gs	1,102,794	1,010,727	92,067
Irving Savings	1,086,547	1,064,209	22,338
	45,966,917	41,865,273	4,236,470
Other City Banks	3,021,909	3,219,752	
	48,988,826	45,085,025	

In Brooklyn and Williamsburg the savings deposits were:

January 1, 1861	$6,791,746
" 1862	6,776,623
Decrease in one year	$15,123

It appears, therefore, that the deposits of ten of the savings banks of the city decreased. $4,236,470
And four in Brooklyn 15,123
$4,251,593

While the increase in the interior towns was	$551,677
Other city savings banks	332,669
	884,346
Actual decrease in the State, year 1861.	$3,367,247

One peculiarity of the returns is that the average amount due each depositor in the Seamen's Savings Bank is over $318, which exceeds that of any other; the average sum due each depositor in the two cities being $213, and in the interior towns and cities $212. The disproportion of deposits in this city compared with the country towns shows the greater concentration and accumulation of labor and capital in the former, viz:

	Population.	Savings Deposits.	Average.
New York....	813,000	$45,085,000	$55 00
Kings County.	280,000	6,766,000	24 00
All others	2,794,000	12,222,000	4 80
	3,887,000	$64,082,000	

SUMMARY, showing the aggregate of the Resources and Liabilities of the Savings Institutions of the State of New York, as exhibited by their reports to the Superintendent of the Banking Department of the State of New York, of their condition on the morning of the 1st day of January, 1862:

RESOURCES.

Bonds and mortgages		$25,643,014
Estimated value of mortgaged premises	$59,594,466	
Stock investments		30,821,921
Par value of stocks	31,025,582	
Estimated value of the same	27,469,299	
Stocks upon which money has been loaned, par value	1,562,788	
Amount loaned thereon		1,073,899
Amount loaned on personal securities		135,718
Amount invested in real estate		1,010,295
Cash on deposit in banks		6,251,410
Cash on hand not deposited in banks.		1,937,385
Amount loaned or deposited, not included in the above heads.		177,155
Miscellaneous		93,428
Add for cents		108
Total		$67,144,233

LIABILITIES.

Amount due depositors	$64,083,119
Miscellaneous	4,986
Excess of assets over liabilities	3,056,066
Add for cents	62
Total	$67,144,233

The Junction Railroad.

The work for the graduation of a portion of this road has been put under contract, between the Pennsylvania Railroad at Bridge street at the Wire Bridge and the Philadelphia and Reading Railroad at Belmont at the Columbia bridge at the foot of the old inclined plane, a distance of 2¼ miles. From Bridge street to Gray's Ferry, which is also about 2¼ miles, contracts for graduation will soon be allotted. This latter part of the line will include the heavier work; the Junction Railroad will be carried under the grade of Market street and Chestnut street, through an arched way; a thorough cut will first be excavated, after which the roadway will be arched over, and the top filled in with earth, forming a tunnel, and thereby providing a safe and unobjectionable crossing under the two thoroughfares of Market and Chestnut street, the first of which now has, and the last of which soon will have, communication by bridge across the Schuylkill river.

The Junction Railroad will provide a distinct, independent, continuous track from the Gray's Ferry Bridge to the Columbia Bridge a distance little short of five miles; it will connect at grade with the Reading Railroad, the Pennsyvania Railroad, the West Chester Direct Railroad, and the Baltimore Railroad, and will be operated with steam-power; with the waste material due to the preponderance of excavation over embankment, the trestle work approach to the west abutment of the Pennsylvania Railroad bridge across the Schuylkill river, at the United States Arsenal, will be filled in and a permanent embankment made in its stead. Altogether, the Junction Railroad is a very important work, and its completion will be followed by marked and positive changes and consequences.—*U. S. R. R. and Mining Register.*

Retrenchment in Ohio.

The Auditor of State, Mr. Taylor, has made an elaborate report to the Legislature, showing where a retrenchment may be made in State, County and Township taxes, and he appends these estimates as the result of such reduction:

General revenue	$354,849 85
School fund	178,437 58
County purposes	141,451 50
Bridge "	145,565 23
Building "	82,162 03
Road "	251,328 59
Poor "	109,012 48
Special tax including volunteer levy.	535,028 45
Township tax	90,469 29
Local school tax	803,245 81
City and village taxes	945,841 41
Total	$3,117,392 31

Eastern (Mass.) Railroad.

We give elsewhere the report of this company for the half year ending Nov. 30, 1861—the time for closing the financial year having been changed to that date. For convenience of reference and comparison the earnings and receipts for the whole year, viz: from December 1, 1860, to November 30, 1861 are also given, as follows:

From passengers		$431,161 69
" freight		100,196 85
" mails		9,724 00
" rents		8,507 20
" miscellaneous		16,349 26
		$565,939 00
And the expenses were:		
Coal, 5,188 tons	$30,417 58	
Wood, 1,529 cords	6,879 12	
Maintenance of way	51,298 14	
" motive power.	29,517 21	
" cars	29,594 93	
Rent of G'd Junction road.	11,000 00	
Passenger expenses	80,736 60	
Freight "	16,030 38	
Miscellaneous	64,063 54	
		319,587 50
Net earnings		$246,401 50
Interest		107,139 23
Surplus		$139,262 27
Profit and loss account	$16,159 68	
Surplus last year	240,407 23	
		256,566 91
Total		$359,829 18
Dividend $4.00 per share		133,836 00
From which has been paid—		
For engines	$14,756 97	
" bridge and wharf	28,481 82	
" land at Beverly	2,500 00	
" old claims adjusted	18,994 17	
Charged off from cost South Reading Railroad	149,567 92	
		214,300 88
Surplus		$47,692 30

Miles run by passenger trains 299,573; by freight trains, 72,119; by other trains, 60,408—total miles run, 432,100. Number of passengers carried 1,122,405; number carried one mile, 18,043,819. Tons of freight carried, 80,071; tons carried one mile, 2,286,484.

Canal Expenditures.

The following recapitulation is from the reply of the Auditor of the Canal Department of the State of New York to the resolution of the Assembly, of the amounts paid in the last three years on contract for construction of the canals and on awards by the Canal Appraisers.

The recapitulation shows the total amounts paid to be as follows:

Construction of Erie Canal	$1,301,691 18
Champlain Canal	98,160 16
Oswego Canal	401,375 10
Cayuga and Seneca Canal	151,163 72
Black River Canal	81,680 64
Genesee Valley Canal	59,215 10
	$2,093,185 90
Canal Appraisers' awards	898,280 52
Total	$2,491,466 42

Canal Estimates.

The State Engineer, in reply to a resolution of the Assembly asking him to report on the feasibility and expense of an enlargement of one tier of locks on the Erie canal to one hundred and fifty feet in length and twenty-five in width, says that the Erie canal, from Buffalo to Albany, is three hundred and fifty and a half miles in length; it has fifty-six double and fourteen single enlarged locks. The Oswego canal is thirty-eight miles in length, and has eighteen single enlarged locks. The expense of enlarging the Erie canal locks he estimates at $2,815,900; the same for Oswego canal, $625,600. Total $3,441,400. He also reported on enlarging the locks on the Champlain canal, so as to admit the passage of gunboats.

The length of this canal is sixty-four miles; the summit level is one hundred and fifty feet above tide-water, and the descent to Lake Champlain is fifty-six and one quarter feet; there are thirteen locks up and seven down, going to Champlain. The work of enlarging these locks is estimated at $815,000. To enlarge the entire canal so as to make a ship canal, he estimated at $3,770,190.

Interest and Dividends.

The Pennsylvania Railroad Company have declared a semi-annual dividend of four per cent. on the capital stock of the company, clear of State tax, payable on and after May 15, 1862.

The Lehigh Valley Railroad Company will pay, about the 10th of May, a semi-annual dividend of four per cent., in cash. The semi-annual interest on the coupons of this company's bonds, due on the 1st of May, will be paid on that day.

The city comptroller of Chicago announces that the interest due on the 1st of July on sewerage, water and municipal bonds, will be paid at his office on presentation of the coupons.

Coffee Growing in Illinois.

The resources of our State appear to be without limit.—Not only are we producing our own Syrup and Sugar, and are likely to produce our own Cotton, but it has been demonstrated to a certainty that Coffee can be grown in Illinois. Mr. George R. Hoffman, of Effingham county, last year raised *two bushels of coffee*, nearly identical with Rio Coffee. His seed was sent to him three years ago from Australia. It is unproductive the first year, bearing a little the second year, and is most productive the third season. At his estimate, *thirty bushels can be grown per acre.*—The plant has every appearance of hardiness and adaptability to Illinois soil. Many farmers in Mr. Hoffman's vicinity will plant it the coming season. The Southern rebellion may be the means of proving to the world that the West is capable of supplying the country with all it needs in the way of the substantial, as well as the condiments and luxuries of life.—*Chicago Tribune.*

Fitchburg Railroad.

At a recent special meeting of the shareholders of this company, a vote was adopted, accepting the act passed by the legislature of Massachusetts, at its late session, authorizing the purchase by the company of the property of the Marlboro' and Fentonville branch railroad company. The directors were empowered to consumate the contract for the purchase by the payment of 275 shares of Fitchburg railroad stock. The sum paid last year for the lease of the branch road was $2,584 34.

Panama Railway.

This company have recently commenced the construction of a fine gridiron at the islands occupied by the Panama Mail Steamship Company, in this bay. The gridiron will be sufficiently large to admit the largest-sized steamers, and will prove of the greatest advantage to this port. Although the work of construction is carried on night and day, it will be several months before its completion. The material has all been imported from the United States.—*Panama Star.*

Housatonic Railroad.

At the annual meeting of this company held in February last, the following gentlemen were chosen directors: Charles Hunt, Charles M. Owen, Charles W. Hopkins, Charles Mixter, Morris Ketchum, John L. Stuart, Daniel Marsh, David M. Hunt, Edward Bement. At a subsequent meeting of the board, Charles Hunt was elected President and Superintendent, Charles Averill, Treasurer, and J. T. Lawrence, Secretary.

Track Laying at St. Paul.

The contractor yesterday commenced spiking down the rails on the railroad track, from the Levee towards the Winslow Mills. There is iron enough on hand to complete the road to the mill, and the remainder for the construction of the ten miles will arrive by the first boats.—*St. Paul Pioneer.*

☞ The shipments of gold from Victoria to San Francisco by the agenies amounted in 1858 to $337,775; in 1859 to $1,211,309; in 1860 to $1,303,332, and in 1861 to $1,636,970. The only article of which there was a scarcity at Caraboo up to Dec. 1, was candles which were selling at $2 50 per pound. Flour at the Forks was worth $72 per barrel; beans 45 cents.

Cairo and Fulton Railroad.

The Cairo and Fulton Railroad is again in operation to Sikestown. Citizens of Missouri, who for many months have been kept away from Cairo by military rule and necessity, are now seen in our streets almost daily, coming in and returning by the railroad without interruption.—*Cairo Gaz.*

Pennsylvania Railroad.

The following gentlemen have been elected directors for the ensuing year: J. Edgar Thomson, President; Josiah Bacon, Thomas Mellon, John Hulme, G. D. Rosengarten, Wistar Morris, G. W. Cass, William H. Smith, Samuel T. Bodine, J. Craig Miller.

WANTED, a situation as Foreman Blacksmith by a man who has had 17 years experience in railroading, is a sober man and can give unexceptional reference; has had a very large experience in Frogs, Switches and Rail mending and welding. Address BLACKSMITH, at the office of this paper.

VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.
Address HENRY RUTTAN,
Coburg, Canada.

REMOVAL AND CHANGE OF NAME.

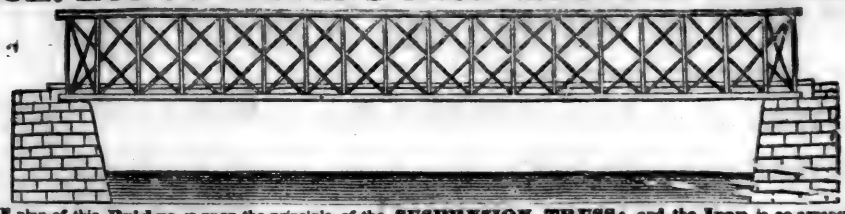
The assortment of Rolls comprises—
Rounds, from 1 inch to 2½ inches.
Squares, from 1 inch to 2½ inches.
Flats, widths 1½, 1¾, 1¼, 1½, 1¾, 2, 2¼, 2½, 2¾, 3, 3¼, 3½, 3¾, 4, 4½, 6, 6½, 7, 8, and 10 inches.
T Iron, 2, 2½, 3¼ and 4 inches.
L Iron, 4x4, 3½x3½, 3x3, 2½x2½, 2¼x2¼, 2x2, 1¾x1¼, 1¼x1¼, 1¼x1¼ inches. 6x3½, 5½x3½, 4x3½, 3x3½, 6x3, 4½x3, 4x3, 2½x3 inches.
Half Oval Iron, 2, 1¾ and 1¼ inches wide.
Screen and Grate Bars.
Rails, 25, 28, 50, 58, 60, 64 and 68 pounds per yard.
Street Rail, 42 pounds per yard.
Rolled Chairs, single or double lips, all sizes.
Rail Shoes, all sizes.

☞ **SALE ABSOLUTE.**



☞ The premises will be sold clear of all incumbrance.

TERMS.—Half the purchase money may remain on mortgage.

The purchaser can also have the stock, tools and other personal property at a valuation.

M. THOMAS & SONS,
Auctioneers, 139 & 141 S. Fourth st.

COL. LONG'S PATENT IRON RAILWAY BRIDGE.

THE plan of this Bridge is upon the principle of the **SUSPENSION TRUSS**; and the Iron is so arranged in its construction as to impart its greatest **longitudinal strength** to the whole work.

The subscribers are prepared to furnish large quantities of **IRON BRIDGING**, for Railroad or other purposes, at short notice, and at moderate prices.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes under water, such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Builders, Contractors, Railroad Companies, Masons and others.

Please address **Hudson River Cement Company,** Jersey City, N. J., or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.				Sheet No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
2.	For Side Hill Cuts and Fills.			14.	" 20 "		¼ to 1
3.	Base 12 ft.	Slopes	1½ to 1	15.	" 24 "		½ to 1
4.	" 14	"	1½ to 1	16.	" 24 "		1½ to 1
5.	" 15	"	¼ to 1	17.	" 25 "		1½ to 1
6.	" 15	"	1 to 1	18.	" 26 "		1½ to 1
7.	" 15	"	1¼ to 1	19.	" 28 "		¾ to 1
8.	" 16	"	¾ to 1	20.	" 30 "		1 to 1
9	" 16	"	1 to 1	21.	" 30 "		1¼ to 1
10.	" 18	"	¼ to 1	22.	" 30 "		1½ to 1
11.	" 18	"	¾ to 1	23.	" 32 "		1 to 1
12.	" 18	"	1 to 1	24.	" 32 "		1¼ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, May 3, 1862.

Finances of Baltimore.

The report of the Register shows that, on the 31st of December last, the indebtedness of the city of Baltimore was as follows:

Internal improvements		$4,963,215 20
Miscellaneous purposes		400,919 66
Court House		160,754 21
Supply of water		3,400,000 00
New jail		250,000 00
Loan to Baltimore & Ohio R. R. Co.		5,000,000 00
Loan to Pittsburg and Connellsville		1,000,000 00
Park stock		553,966 25
		$15,728,855 32
Bonds guarantied by the city for		
N. W. Va. Railroad Co., due Jan. 1st, 1871	$1,500,000 00	
York & Cumberland R. R. Co., due Jan. 1st, 1877	500,000 00	
Western Maryland R. R. Co., due Jan. 1, 1890	175,000 00	
		2,175,000 00
Total stock and guarantied bond debtedness		$17,903,855 32

Against this the city holds Baltimore and Ohio Railroad stock and dividends, amounting to $4,550,000; also $1,226,541 46 of its own stocks distributed among the various sinking funds, making a total of $5,816,541 46, and leaving the net liabilities $12,087,293 76. The amount added to the sinking fund last year was $149,992. Three semi-annual dividends have been paid by the city on bonds guarantied to the Northwestern Virginia Railroad, making $135,000, besides $79,165 36 for tunneling that road.

The total amount of receipts last year was $2,870,348 57; of disbursements, $2,695,837 03. Balance on hand, $222,143. The taxes collected for city purposes in 1861 were $1,300,093, exclusive of interest. Of this $466,147 was for arrears of previous taxes, $248,438 for taxes on personal property and $525,526 for those on real estate last year. The plan of separating the second and third of these is said to work satisfactorily.

The entire basis of taxation in 1861 was $139,000,000. It is supposed that for the present year this aggregate will be reduced to $130,000,000. The amount required for all purposes is $1,208,473.

The Acting Mayor's message calls attention to the fact that many persons avoid city taxation by residing a few months in summer outside of the limits. It is recommended that the Legislature be asked for a law making property wherever found liable to pay for the expense of its protection. Some important changes for the reduction of expenses are recommended in the Health Department.

The water works are now completed, furnishing a full and constant supply of wholesome, pure water. Their entire cost is given at $3,700,000 in round numbers; but this may be reduced $200,000 by the disposal of some unnecessary property in connection with them. The report of CHARLES P. MANNING, Esq., Chief Engineer, gives the capacity of Lake Roland, the source of supply, at 500,000,000 gallons, and that of the conduit at 36,000,000 per day. It is suggested that the water revenue be increased to meet the large deficiency in paying the interest. The receipts for 1861 were about $180,000 against $210,000 for interest on the debt, and $10,000 for expenses of management, leaving a deficit of $40,000.

The total losses from fires last year amounted to only about $60,000—less than occurred in any previous year for a quarter of a century.

The City Passenger Railway Company, says the Message, has failed to agree with the terms of the contract proposed by the Joint Select Committee. The amount received from this association to constitute a Park fund, was $58,862 70, against $32,902 for the two years previous.

As the Northwestern Virginia Railroad has not paid the interest on its bonded debt, it is recommended that the mortgage be foreclosed and the road sold. The Pittsburg and Connellsville Railroad Co. have also failed to pay interest. The City of Baltimore has endorsed $75,000 of the bonds of the Western Maryland Railroad Company, making in all $175,000 of these endorsed to this date.

Morris Canal and Banking Company.

From the report of this company for the fiscal year ending February 28, 1862, we learn that the canal was opened for business on the 18th of March on the Western division, and the 25th on the Eastern division. The navigation was maintained, with occasional interruption from casualties to the banks and machinery, until closed by ice on the 13th of December at the West end, and the 20th of December at the East end.

The income of the company from tolls and other sources was $291,846 37

And the expenses were:

Operating canal	$31,068 53	
Repairing canal and works	82,365 18	
Salaries, interest, law and other expenses	25,611 75	
Transportation expenses	4,357 41	
		143,402 87
Profit		$148,443 50
Balance at credit Feb. 28, 1861		18,290 68
		$166,734 18
Dividends on preferred stock		$117,500 00
Interest on mortgage bonds		32,910 00
Depreciation of boats, horses, etc		3,603 42
Balance surplus		12,720 76
		$166,734 18

Compared with the previous year the receipts show a decrease of $58,864 26, with a decrease in expenses of $869 39—making the decrease in net earnings $57,994 87.

Notwithstanding the diminution of business upon the canal, and the consequent reduction of

income of the company, the net earnings of the year have sufficed to enable the company to keep their works in good repair, increase the capacity of the canal, to pay the interest on the bonded debt, and the usual dividend on the preferred stock.

The expenditures during the year, for the permanent improvement of the canal, and its works, including the outlay at Jersey City, and for new boats, has amounted to the sum of $42,677 50. These improvements and outlays were deemed necessary for an increased efficiency of the canal, and to furnish additional facilities to the trade. In reference to the improvements made and expenses incurred under this head the engineer says:

My last report contained an explanation of the causes of the unusually large expenditure under the head of *Repairs of Locks* during that year. The expenditures under this head during the past season, are of the same character, and made in connection with the lengthening of the locks as authorized by the Board of Directors, July 20th, 1860. All those so repaired are now in as good condition as new locks, and will require but small repairs for many years to come. This kind of general repairs, made in connection with lengthening of the chambers of the locks, has been suspended during the last year. It is therefore expected that this item of repairs will be materially reduced the ensuing year.

The item of *Repairs of Planes* appears to be large as compared with former years. The average annual cost per plane, from the first introduction of the present plan upon all the planes west of the summit, has been $1,106, omitting the first year in each case, during which, the repairs were always merely nominal. The average of the last year is $1,351, which is $245, or about 22 per cent. more than the average of the whole period. It should, however, be borne in mind, that this item necessarily bears a closer relation to the tonnage of the canal than any other item of the current expenses. Also, that the amount of renewals, of the principal parts of the planes, is liable to considerable fluctuation in different years. An inspection of the tonnage table hereto annexed, will show an increase of trade during the last three years, sufficient to account for the increase in this item of repairs.

In the original construction of the stone aqueduct over Passaic river, at Little Falls, no provision was made for conducting away the small quantity of water which almost inevitably finds its way, where the work is used as a conduit, into the interstices, which are always found, even in the best executed masonry. In consequence of this omission, the masonry of the arch has been injured by the freezing of the water, which had found its way into the mortar joints, and the seams in such stones as were not perfectly sound when placed in the arch. This operation having been repeated from year to year, and the cavities being each time enlarged, the injury thereby has been increased to such an extent as to seriously endanger the stability of the structure. To prevent further injury from this cause, the water-way of the aqueduct has been lined since the close of navigation with pine plank, and made perfectly water-tight by the use of concrete and grout between the lining and the masonry, and by caulking and paying the joints of the planking.

The principal expenditures at Jersey City have been for adding to the height of the crib-work which encloses the southern canal basin, for erecting and extending piers and bulkheads for handling and storing coal, iron and lumber—and for excavating a suitable channel or entrance from the deep water of the Hudson River to the said basin, and other excavations to facilitate the movement of vessels in the basins and around the new piers.

A new pier or bulkhead, on the east side of south canal basin, 300 feet long by 120 feet wide, will be completed in time to be used the ensuing season.

A coffer-dam, with a suitable gate, has been constructed around so much of the tracks at the foot of Plane No. 1 West, as are covered by the waters of Stanhope Reservoir. This will allow the sheaves, groove-wheels, and tracks, under water at the foot of the plane, to be examined, repaired, or replaced, if need be, during the season of navigation.

The lift-lock at the outlet of Stanhope Reservoir, in the village of Stanhope, was originally constructed in the winter of 1845–6, entirely of wood. This lock had become so much dilapidated as to be considered unsafe for such a location, and the head of it is now being rebuilt of stone, and the chamber of the lock lengthened, in conformity with the general plan of the lengthened locks.

In addition to the foregoing expenditure for permanent improvements, there has been charged to capital account the sum of $18,507 50 discount upon mortgage bonds sold, and $111 64 for land damages—making a total of $61,296 64; from which should be deducted the sum of $424 09 (a credit to capital account), leaving the net sum of $60,872 55.

At the commencement of the past fiscal year, the floating debt of the company was $81,549 56, and the bonded debt $535,250; and at its close the floating debt was $27,992 03, and the bonded debt $655,250—the increase of the bonded debt having been used in payment of the improvements made to the canal and its works, and other expenditures made in largely reducing the floating debt.

The improvements to the canal, and the locks, which have been made during the last two years, and the additional facilities for piling and shipping coal at Jersey City, have made the Morris Canal a desirable avenue for that trade. And it is confidently expected, that its present excellent condition will continue to it, its full share of the transportation of coal from the Lehigh and Scranton regions.

The unsettled and disturbed state of the country, and the interruption of trade consequent therefrom, renders it impracticable to judge, with any degree of accuracy, the amount of business to be done over the canal the ensuing year; but the rather unexpected activity in the coal trade, and the revival in the production of iron, give promise of an active season upon the canal, and the usual or increased revenue to the company.

GENERAL STATEMENT.

The Morris Canal is 102 miles in length, extending from the Delaware opposite Easton, Penn., to Jersey City. Its entire tonnage last year was 619,369 tons. The officers of the company are:

President—Ephraim Marsh.
Engineer and Sup't—Wm. H. Talcott.
Secretary—Lewis N. Condit.

Corporations, and the Usury Laws.

THE STATUTE OF 1850 PROHIBITING CORPORATIONS FROM INTERPOSING THE DEFENCE OF USURY; MONEY PAID BY THEM IN EXCESS OF LEGAL INTEREST CANNOT BE RECOVERED BACK.

Previous to the act of 1850, corporations, in reference to the provisions of the statute of usury in the State of New York, stood in the same position as individuals. They could and did avail themselves of the provision of the statute, to be released from their contracts affected with the taint of usury. The celebrated case of *The Dry Dock Bank* vs. *The American Life & Trust Company*, is an instance of a corporation availing itself of the statutes to prohibit usury, for the purpose of relieving itself from its contracts. It had committed usury, and had derived a benefit therefrom, and then came into a court of equity to punish its *confrere* in guilt by repossessing itself of the property parted with, whilst retaining for its own benefit what it had received from the opposite party. The court, in obedience to the positive mandate of the statute, had to lend its aid to the perpetration of this injustice; but the statute was stigmatized, by one of the learned and eminent judges of the Court of Appeals, as "severely penal in its provisions;" that "in fact, it was a barbarous act, and unworthy of the age, and country where it was found." This case was decided in 1849, and gave rise to the act passed at the ensuing session of the Legislature, of April 6, 1850. This act was intended to prevent a repetition of similar transactions, and is entitled "an act to prohibit corporations from interposing the defence of usury;" and the first section declares that "no corporation shall hereafter interpose the defence of usury in any action."

The case of Butterworth, Receiver of the Island City Bank *vs.* O'Brien arose since the passage of this act; and it has now been decided in this case by the New York Court of Appeals, that this statute (ch. 172 of 1850) prohibits corporations from interposing the defence of usury, and deprives them of the right to recover back money paid by them in excess of legal interest. The complaint set forth the appointment of the plaintiff as Receiver of the Island City Bank, and averred that the bank, within a year preceeding the commencement of the action, had paid, and the defendant had received, on the loan or forbearance of sundry sums of money, upon a corrupt or usurious agreement, the sum of at least $10,000; for the repayment of which the Receiver prayed judgment. The defendant demurred, upon the ground that the complaint did not state a cause of action. The defendant had judgment on the demurrer, which having been affirmed at general term in the first district, the defendant appealed to the Court of Appeals.

There were two opinions delivered at the decision of the case. Justice Davis, in his opinion, says, "When we bear in mind the circumstances under which this act was passed, we cannot be at a loss for the meaning of the words used by the

legislature. A corporation had set up, as a defence to a contract, or, in other words, the grounds upon which it was illegal, the privileges secured to them by the statute of usury. But they had interposed the defence of usury to a claim against them, and on that ground had sought affirmative relief. It was the intent of the legislature to prohibit such an interposition, or taking advantage or benefit from the defence of usury. It is quite immaterial, when we look at the objects of the legislature, whether this claim by a corporation to avail itself of the statute be set up affirmatively or be interposed as a shield, when attacked by the other party to the usurious contract. It was obviously the meaning and intent of the legislature to take away from corporations, altogether, all benefit or advantage resulting from the statute of usury. As to them, it was as though it never had existence as a law. It was not thereafter to be used or taken advantage of by them, either as a weapon of attack or as a shield for defence." The following opinion was also rendered:

JAMES, J.—The rate of interest in this State is fixed by statute at seven per cent. By section second, all persons and corporations are forbidden either directly or indirectly to take or receive more than that rate; and section three declares that "every person who, for any loan or forbearance of money, shall pay or deliver any greater sum or value than is allowed by law, and his personal representatives, may recover in an action against the person who shall have taken or received the same, and his personal representatives, the amount of the money so paid or value delivered above such rate, if such action be brought within one year after such payment or delivery.

This action is brought under that section of the statute, and the defendants insist that it cannot be maintained because corporations are not included within the language of that section, and are not authorized by it to bring an action like this; that a right of action to recover back usury actually paid is only given to natural persons.

It is important to note that while the second section, which prohibits the taking of usury, names both "persons and corporations" as within the prohibition, the third section only names the persons as authorized to recover back any excess of interest paid. Using the term corporation in one section, and omitting it in the next, indicated that the omission was intentional on the part of the legislature, and that it did not intend to confer upon corporations the right given by that section to individuals.

The legislature has in two instances in the statute, and in only two, seen fit to define the word "person," and to declare that, when used in the sections or chapters therein designated, it should be construed to mean "corporations," &c., viz: that which relates to "crimes and their punishments," and that which relates to "promissory notes and bills of exchange." The implication from this fact, in the absence of any general statute on the subject, is, that the term "person" is used in other parts of the statute, its meaning is not to be extended beyond its common and ordinary signification. That being so, the right to bring an action for the recovery of the excess paid upon a usurious transaction is not given to corporations, and this would accord with the more recent statute which prohibits a corporation from interposing the defence of usury.

It was enacted in 1850 that no corporation should thereafter interpose the defence of usury in any action. The plaintiff insists that this statute was intended only to deprive corporations of the right to avail themselves of a forfeiture of the contract given by the statute of usury as a defence, and not to interfere with any rights of action given by any other statute to recover back any excess of interest actually paid beyond the legal rate. Such, however, is not its fair construction. Its legitimate effect was to repeal the existing usury laws of this State, as to corporations.

It is certain, therefore, that this action could not be maintained by the corporation itself. The receiver stands in no better position. He is the representative of the corporation, having its title to the assets, and subject to its disabilities in relation to all its affairs. He can assert no claim which it could not, and the corporation having no right of action for this matter, he had none.—Judgment affirmed.

Canada Banks.

Street Railways in London.

Mr. George Train and his foreman have been tried and convicted by an English Lord Chief Justice and a special jury, for laying down an iron tramway for street railroads from Westminster Bridge to Kensington Park, London, which were alleged to be dangerous to the public, and a nuisance. Mr. Train's case was clearly prejudged, as the jury intimated that it was useless to call witnesses for the defence, though forty were present, and the Chief Justice sanctioned the proceeding by accepting the verdict. Some points of law were raised for subsequent decision, but it is probable that Mr. Train will have to take up the tramways. Since they were laid down, in August last, no less than 600,000 persons have traveled on only four cars, thus proving that street railroads are popular with the lower classes in England.

The National Finances.

The events of the past week have, in a striking manner confirmed the view we have for some time past taken of the financial position of government—that this is simply a result or consequence of its political position. As the latter is strengthened so is the former. The capture of New Orleans, consequently, has been followed by an important advance in the market value of its securities. Though only a step in the necessary course of events, the capture of that city will be received throughout the world as the most important blow yet dealt to the rebellion, and as full evidence of its speedy reduction. England will probably attach an extravagant importance to the success, from the recollection of a reverse suffered in a similar attempt, and from the fact that New Orleans is the grand mart of American cotton. There will be no more attempts to depreciate the military power of our government, or the efficiency of the blockade, while the cotton question will be regarded as practically solved. In fact, the fall of New Orleans, following fast upon the capture of Fort Pulaski, will restore the *entente cordiale* between the two countries upon the permanent basis of mutual interest, and respect for power, if nothing else. England will henceforth regard the United States as a nation firmly united, not hopelessly divided, as the newpapers and creators of public opinion in that country have so stubbornly asserted, and perhaps believed.

Important as have been the military events, commercial ones still more important must follow. The cotton crop of the past year will gradually come forward. Some small parcels may be destroyed, but the bulk of the crop will be carefully saved, and will be offered for sale as soon as protection is afforded against the petty tyrants that fomented the rebellion, and by the fear they created, succeeded in giving an appearance of unity to it. The crop will come forward so slowly that high prices will for some time be maintained, so that if it is somewhat less in bulk, than that for previous years, it will realize a larger sum in the aggregate. But in whatever condition its exports may place the commercial relations between the two countries, its movement will create an intense feeling of relief in England, in view of the apprehended consequences resulting from the stopping of mills, an unemployed population, and the vast reduction in the volume of the foreign trade of that country.

Under the influences of the various causes referred to, Englishmen will naturally turn heir attention to our public securities. All things considered, this country and people stand as well with them as they ever did. But whatever may have been alleged against us, no stain has ever rested upon the credit of our government. The contest has served to demonstrate both a political and commercial strength never before credited to it. It was natural that the rebellion should cause a heavy decline in its securities, as the event was unprecedented, and the result, like all that rests in the future, uncertain. But with the steadily increasing confidence in our military success, the advance has already equalled 15 per cent. from the lowest point touched. Notwithstanding the enormous calls of government upon the capital of the country, the tendency is still upward, and must continue till prices reach those so long maintained when much higher rates ruled for money. It is not to be expected, nor is it desirable, that the advance should be a rapid one, although, with the capture of Yorktown or Richmond, the 20 year 6 per cents. will undoubtedly sell at par. The advance from that point is likely to be steady, as such a success

must attract a very large amount of foreign capital. Money is only about 2 per cent. in London, and not much higher at several of the Continental Centres. It will speedily take a direction where thrice these rates can be had, upon what experience has shown to be the most perfect of all securities—government obligations, which are treated purely as commercial ones, and which will return, at no distant day, the full principal to the purchaser.

But independent of all foreign demand, with the low price of money at home, and the full confidence now existing, not only in the government, but in the restoration of internal order, the public securities must continue to steadily advance. The combination of monied interest in their favor is irresistible. As the banks hold very large quantities of them, they have a decided preference in loans. There is, in fact, a decided disposition to treat them as the equivalents of money. This must speedily be the case. In fact a six per cent. bond should command a much higher price than a non-interest paying security, which is at present very nearly at par in reference to gold, from the convenient use it serves as currency.

The appreciation of Government Securities is an index of a corresponding movement in the whole list of Securities dealt in at the Stock Exchange. First class Railroad Bonds are still far below the rates prevailing a few years ago, when their real value was much less than it is now. In a great many instances all doubt as to the prompt payment of interest has been removed, and the roads, by their largely increased earnings placed on a much firmer basis. The public is also getting a much more accurate view as to the value of Railway Shares. Those of roads that have shown an ability to pay dividends are steadily advancing to the highest prices they ever commanded.—*Hallett's Financial Circular.*

Pennsylvania Railroad.

Improvements have contributed to the increase of business in the southern section of our city. A large number of cars daily passing over the new bridge of the Pennsylvania Railroad, which crosses the Schuylkill. The iron superstructure of this bridge consists of three spans of one hundred and ninety-two feet, or one hundred and eighty feet in clear between supports. There is another iron bridge of seventy-two feet span which passes over Sutherland avenue, and the abutments of the two bridges are connected by a series of stone arches, four in number, each of thirty feet span. A temporary trestle work, seventeen hundred feet in length, connects the west end of the Schuylkill bridges with the West Chester and Philadelphia Railroad, in front of the almshouse.—*Phila. Inq.*

Milwaukee and Prairie du Chien Railway.

The following is the late law of the State of Wisconsin concerning the Milwaukee and Prairie du Chien Railway:—

Published April 16, 1862. *Chapter* 86, *Private and Local.*

An act to amend chapter 308 of the general laws of 1860, entitled "An act to facilitate and authenticate the formation of a corporation, by the purchase of the Milwaukee and Mississippi Railroad Company."

The people of the State of Wisconsin, represented in Senate and Assembly, do enact as follows:

Section 1. Section seven of chapter 308 of the general and local laws of 1860, entitled "An act to falicitate and authenticate the formation of a corporation, by the purchase of the Milwaukee and Mississippi Railroad Company," is hereby repealed.

Sec. 2. This act shall not be construed as in any manner imparing or invalidating the articles of association of the purchasers of the Milwaukee and Mississippi Railroad Company, executed by L. H. Meyer, John Catlin, Allan Campbell, W. Schall and Louis A. Von Hoffmann, on the 21st day of January, 1861, and filed in the office of the Secretary of State, and the said articles of association of the Milwaukee and Prairie du Chien Railway Company are hereby ratified and confirmed.

Sec. 3. This act shall take effect and be in force from and after its passage and publication.

Approved April 5, 1862.

Jeffersonville Railroad.

The earnings of this road for the year ending December 31, 1861, were:

From passengers		$150,211 11
" freight		129,574 08
" mails		11,850 00
" express		6,353 73
		$297,988 92

And the expenses were:

Repairs of road	$51,175 71	
" cars	8,864 55	
" machinery	8,421 33	
Running trains	29,770 56	
Station expenses	20,518 85	
Fuel	21,704 20	
Oil and waste	1,929 70	
Rents	4,083 27	
Salaries	6,000 00	
Stock killed	3,423 36	
All other expenses	7,436 78	
		163,328 31
Excess of earnings		$134,660 61
Add balance from previous year		129,918 34
Sale of old iron, etc.		2,692 15
Telegraph receipts		286 18
		$267,557 28

Disbursed as follows, viz:

Interest on bonds	$51,553 80	
Taxes	2,737 56	
New freight cars	11,696 24	
City of Louisville, for interest paid by her on 199 bonds	35,820 00	
Overcharges refunded, real estate, fencing, etc.	1,788 88	
Disputed balances	3,636 90	
		107,233 38
Balance to profit and loss		$160,323 90

The gross revenue from all sources during the year amounted to the sum of $300,967 25; and the disbursements, (exclusive of $30,300 paid over to the sinking fund for the redemption of 1st mortgage bonds,) to $231,104 79—leaving a surplus of earnings of $69,862 46; or, including the surplus from previous years, of $199,780 80. Deducting therefrom $35,820 for three years' interest paid by the city of Louisville on 199 bonds, and $3,636 90 for bad, doubtful and disputed balances, now charged off, the sum remaining to credit of profit and loss January 1, 1862, was $160,323 90. Of this sum $52,840 84 has been applied to the liquidation of the floating debt of the company standing against it at the opening of the road, leaving a balance of 107,483 06; deducting from this the cash liabilities at the close of the year, $75,545 52, there remains a balance of $31,937 54 surplus means. The Treasurer says:

There has been paid over to the United States Trust Company, New York, during the year, the sum of $30,300, as a sinking fund for the purchase of first mortgage bonds, as provided in an agreement between this Company and the holders of said bonds, bearing date April 14, 1859. From the deposit of $15,000, made under this contract in June last, the said Trust Company purchased seventeen bonds, and held a surplus of $677 50; and from the deposit made in December of $15,300, and balance from June deposit of $677 50, making $15,977 50, the Trust Company, in their report of January, 1862, inform me of the purchase of eighteen bonds, leaving a surplus in the sinking fund of $197 50, after paying them their commissions on the thirty-five bonds purchased by them. The result, therefore, of the deposit of $30,300 to the sinking fund, during the year 1861, is the purchase of thirty-five first mortgage bonds of the par value of $1,000 each, and a surplus carried forward of $197 50. At a meeting of the Board in January last, these thirty-five bonds, with the coupons attached, were destroyed in the presence of the board by burning.

By the provisions of the contract made with the holders of the second mortgage bonds, bearing date April 14, 1859, it is stipulated, and by the authorities thereof agreed to, that the city of Louisville pay the interest for five years on the bonds issued to and sold by this Company. At a late meeting of the Board of Directors, it was ordered that the sum of $35,820 be placed to the credit of said city, and that this amount be charged to profit and loss, said sum being the amount paid by her up to the 1st day of November last.

The following is a comparative statement of earnings from 1854 to 1861 inclusive:

1854	$206,544 15	1858	$229,982 85
1855	218,388 08	1859	242,095 28
1856	270,827 34	1860	302,006 41
1857	222,484 08	1861	297,988 92

It will be seen that, with the exception of 1860, the earnings of the past are largely in excess of those of any previous year. The operating expenses show a decrease of $25,880 38; and the earnings less expenses, an increase of $21,862 89. The president says:

In furnishing you with the usual annual statement of the affairs of this road for the fiscal year ending with December, 1861, it affords me great pleasure to be able to present you a much more favorable condition of the finances of the road than I could promise a prospect for at the beginning of the year, as the Southern trade had comprised a large proportion of our total earnings, which was entirely suspended for eight months of the year, as I anticipated in my last report. I am more than gratified, as you must be, that our business has been so well maintained, without any part of this business.

But, in lieu of this loss of Southern freight and passengers, we have had a liberal share of business to do for the Government, without which our business would have been comparatively small. Our usual stock business for November and December, 1861, was almost entirely lost to us, as we had no prospect for a market for the product of the hogs, which to us in all former years, had been a source of considerable revenue in those months.

The success of our armies in the South for the past forty days begin to promise an ultimate, if not a speedy restoration of former commercial relations with the South. We are already receiving some benefit from that source, in the way of freights and passengers, and its final restoration will give us a larger business than we have ever yet had; but we cannot hope to realize a large benefit from that source within the present fiscal year. Still, we believe our business from all sources will be as profitable the present as it has been for the past two years.

Allow me to call your attention to the Report of the Superintendent, which follows this, giving a general as well as detailed statement of the condition of the road and its equipments. We have, during the past year, done a large amount of work on the road, having put in a large number of cross-ties, built two new bridges and two spans on one of the largest bridges on the road. We have also added largely to our rolling stock; and the end of the fiscal year found our road and equipments in as good, if not better, condition than they have ever been. Our bridges are now better than they ever were—much stronger and more

durable, having been built of heavier and better material. You will see from the Superintendent's Report, that we will have to build two bridges the present year, one of them the largest on the road, the other a small bridge; and when these are done, all of our bridges, with little exception, will be new, and will last twice the length of time the old ones stood. After the present year the cost of maintaining our track will be materially lessened, as we have within the past two years, and will within the present, have placed permanent work of stone and dirt at all practicable points, instead of wood which we have taken up, and which had been very expensive to maintain.

You will also find annexed the Report of the Secretary and Treasurer, giving a statement of the condition of the financial department of the road, from which you will readily perceive our ability to meet all of our engagements with creditors. We retired during last year thirty-five of our first mortgage bonds, still leaving a balance of means on hand to be applied to same purpose. We feel entire confidence in our ability in future to meet all liabilities as they may mature. If our bonded debt of first issue had been made payable in twenty instead of ten years, we might now be paying stockholders a reasonable dividend. But as this debt is now due, and we have arranged with them to make annual payments until all is paid, we cannot, with any certainty, promise stockholders any dividends for some time to come.

The company have 15 engines. The number of miles run during the year has been 303,161, at a cost for repairs of $8,641 39, or 2.85 cents per mile run; using 1,184 gallons of oil, costing $732.69, or 0.24 cents per mile run. Number of miles run to a pint of oil 32. Cost per mile for waste, 0.10 cents. Cords of wood used, 10,880. Average miles run per cord 27.68.

The company will require during the current year from 40,000 to 45,000 ties; also 200 tons of new and re-rolled iron.

CONDENSED BALANCE SHEET.

Railroad Earnings—Weekly.

The receipts of the Grand Trunk Railway of Canada for the week ending April 12, 1862, were:

16,247 passengers	$25,120 74
Mails and sundries	2,882 38
13,790 tons of freight and live stock	58,517 29
Total	$86,520 41
Corresponding week, 1861	88,103 18
Decrease	$1,582 77

The earnings of the Galena and Chicago Railroad the 3d week in April, 1862, were $19,501 11
Do., 1861 22,602 91
Decrease $3,001 80

The earnings of the Cleveland and Toledo Railroad for the 3d week in April, 1862, were $19 149
Do., 1861 19,205
Decrease $56

The earnings of the St. Louis, Alton and Chicago Railroad for the 2d week in April, were:

1862	$15,226 40
1861	14,750 55
Increase	475 85

The earnings of the St. Louis, Alton and Chicago Railroad for the 3d week in April were:

1862	$15,597 85
1861	17,128 84
Decrease	$1,530 99

The earnings of the Toledo and Wabash Railroad for 3d week of April, 1862, were $18,993 14
Do., 1861 18,592 76
Increase $400 38

The Chicago and Rock Island Railroad earned the 3d week in April, 1862 $19,027
Do., 1861 19,480
Increase $453

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 2d week of April, 1862, were $18,256 52
Corresponding week, 1861 10,766 43
Increase $2,490 09

The Buffalo, New York and Erie Railroad Company earned for 15 days of April, 1862. $39,175 30
Do., 1861 29,890 64
Increase $9,284 66

The receipts of the Grand Trunk Railway of Canada for the week ending April 19th, 1862, were:

14,882 passengers	$21,034 72
Mails and sundries	2,837 68
13,587 freight and live stock	42,963 29
Total	$66,835 69
Corresponding week, 1861	78,412 76
Decrease	$11,577 07

The traffic of the Great Western Railway of Canada for the week ending April 25, 1862, was as follows:

Passenger	$16,236 74
Freight and live stock	30,268 22
Mails and sundries	1,365 76
Total	$47,870 72
Corresponding week of last year	45,856 69
Increase	$2,014 02

The Michigan Central Railroad earned in the 3d week in April, 1862. $40,351 45
Do., 1861 40,528 06
Decrease $176 61

Temperature at which Coal Oil will take Fire.

The Cincinnati *Price Current* gives a table showing the character of various specimens of coal oil. The tests were made by a competent chemist, at the instance of the authorities of Cincinnati, for the purpose of ascertaining at what temperature these oils would explode, or take fire, with the following results:

Name of Oil.	Temperature it emitted a flashing vapor.	Temperature it took fire.
Lucesco, Pittsburg	90	125
Union Coal Oil Co., Maysville	145	167
New York Companies, Cannelton Coal Oil, Kanawha	165	194
Lyons, Pittsburg	70	25
Newport, Pittsburg	82	102
——, Pittsburgh	73	101
Miami, Cincinnati	95	115
Natrona	108	136
Juniata	34	102

The oils to be tested were placed in an open vessel and heated by a water bath to the temperature indicated.

New York State Banks.

Annexed is a summary of the quarterly statement of the banks of this State, as made to the Superintendent of the Department, showing their condition on the morning of the 15th of March:

RESOURCES.

Loans and discounts		$162,017,978
Overdrafts	$1,404 and	381,606
Due from banks		17,849,320
Due from directors	7,012,606	
Due from brokers	3,355,375	
Real estate	10,500 and	9,476,483
Specie		34,301,092
Cash items		21,720,544
St'ks and promissory notes		63,866,702
Bonds and mortgages	82,000 and	6,888,941
Bills of solvent banks		3,436,080
Bills of suspended banks	$53 and	648
Loss and expenses account		1,008,538
Add for cents		987
		$320,948,369

LIABILITIES.

Capital	$108,665,619
Circulation	28,330,973
Profits	12,112,183
Due to banks	38,181,599
Due to individuals and corporations other than banks, etc	1,757,045
Due to Treasurer of the State of N. Y.	3,597,799
Due depositors on demand	124,988,259
Amount due, not included in the above heads	3,214,900
Add for cents	492
	$320,948,869

Two hundred and ninety-nine banks were doing business on the day above noted, all of which reported. The Clinton Bank of Buffalo is winding up, consequently made no report.

Since the last report, the Lincoln Bank, Clinton, Oneida County; Palisade Bank, Yonkers, Westchester County, and T. O. Grennis & Co.'s Bank, Utica, have "filed their papers," and will commence business immediately.

NEW YORK CITY BANKS.

	Dec. 28, '61.	Mar. 15, '62.
Loans and discount	$127,087,003	$98,586,943
Specie	26,182,210	31,087,652
Circulation	8,276,710	5,870,385

Boston and Western Trade.

Last week we noticed the fact, that there had been an equalization of freights from and on all the Western Railroads leading to Boston and New York, so as to place the former on a par with the latter in the competition for Western business. This is one step in the right direction, and an important one.—but not the most important. New York has now the advantage over Boston in the receipt of Western produce, solely on account of her superior facilities of transportation and the cheapness of carriage by rail and water; though, perhaps, mainly so.

All the wheat, flour and grain that is transported by canal and river to New York, can be carried directly alongside the ship without any charge for truckage or wharfage. Let any one at all acquainted with the details of shipping examine for a moment the expense of these two items, to say nothing of the waste which is unavoidable in so many times handling, and he will see what an advantage New York has over Boston in this respect. If a Boston shipping agent sends to Chicago and requests the grain broker or shipper in that city to send his shipments to Liverpool *via* Boston, he is met with the reply that the detail expenses in Boston are greater than in New York; and where the margin is small, and the shipper is shipping to make a market, these detail expenses are of great importance. All the grain, flour, etc., that can come from the West to Boston now must be landed at the terminus of the Worcester Road, or South Cove, or at points on Charles River, above bridges in either case, involving a very large expense for handling, trucking, wharfage, etc. But in New York, as we have before remarked, all these are avoided. It may be said in reply, that this advantage in New York is only applicable as long as the canals and rivers are open; but it must be remembered that the Long Dock Company have perfected their arrangements, so that the cars on the Erie R.R. can deliver Western freight alongside ships drawing the greatest amount of water; and that, in Brooklyn, large elevators have been completed within the year.

These are considerations which we deem of the highest importance, but which we fear do not enter into the considerations of our merchants and shippers as much as they ought. If it were impossible for Boston to have these water communications by rail connections, it would be useless to say anything about the matter. Nor is the idea by any means a new one. It was practically developed by S. S. Lewis, Esq., in the Grand Junction scheme, which was to unite the whole chain of railroads from the Old Colony to the Eastern, and virtually place their termini at deep water in East Boston. Mr. Degrand, the great advocate of railroads, and Mr. Nathan Hale, the first President of the Worcester R. R., used to speak of the completion of the Western road and its approach to Boston Harbor, as affording a "long dock" for the West to ship their immense produce to Europe; later still was the scheme of the late Addison Gilmore, to extend the Worcester road over to South Boston and combine deep water privileges with extensive warehouses and depot grounds. This latter is, perhaps, or will be, if ever completed, the best scheme of the two,—that is, better than that of Mr. Lewis; but for this we have got to wait, while, for a small outlay, the Grand Junction can be renovated and put in running order; and at is terminus in East Boston there are already shipping facilities and wharf accommodations, taking them in all respects, unrivalled in any other city. There is an effort on foot at the present time to bring this about, and we trust that those who have labored so earnestly to bring down the rate of freight from the West, will give it their earnest consideration and hearty support. Once develop the usefulness of capacious docks at East Boston, and South Boston will compel the city and State to yield to the demands of progress.—*Boston Commercial Bulletin.*

COMMERCE OF THE PORT OF NEW YORK.

Entries at New York from foreign ports for the first three months of 1862:

	No. of vessels.	Tonnage.
American vessels	673	425,336
Foreign vessels	723	289,8624
Total entered	1,396	715,198½
Do. same time 1861	965	458,802½
Do. do. 1860	808	418,998½
Do. do. 1859	730	360,033½
Do. do. 1858	577	317,538
Do. do. 1857	837	442,545½
Do. do. 1856	631	332,125½
Do. do. 1855	638	298,971½
Do. do. 1854	696	324,025½

By far the largest part of the grain is in foreign vessels, the arrivals of which have more than doubled during the quarter, as compared with the same period of last year. The following will show the comparative clearances for the same period.

Cleared at New York for Foreign Ports for the first three months of 1862:

	No. of vessels.	Tonnage.
American vessels	648	414,645½
Foreign vessels	693	282,327½
Total cleared	1,341	696,972½
Do. same time 1861	966	481,563
Do. same time 1860	709	356,398
Do. same time 1859	653	292,306½
Do. same time 1858	580	286,863½
Do. same time 1857	746	370,861
Do. same time 1856	633	331,134½
Do. same time 1855	683	683,791½
Do. same time 1854	723	331,991½

Imports at New York first three months of the year:

Year.	In American Vessels.	In Foreign Vessels.	Year.	In American Vessels.	In Foreign Vessels.
1859....	$30,302,790	$28,495,393	1861....	$27,321,701	$33,810,451
1860....	30,177,533	34,427,401	1862....	8,732,226	18,771,561

Exports to Foreign Ports for three months:

Year.	In American Vessels.	In Foreign Vessels.	Year.	In American Vessels.	In Foreign Vessels.
1859....	$12,172,916	$8,581,918	1861....	$26,087,198	$3,841,591
1860....	15,184,905	9,866,351	1862....	25,633,759	17,274,547

Hoosac Tunnel Bill.

The Hoosac Tunnel bill was defeated in the Massachusetts Senate on the 21st, by the adoption of a substitute providing for the appointment of commissioners to report to the Legislature the most economical method and expense of completing the tunnel, with its probable value and income. The governor is authorized to take possession of the railroad under the mortgages, to put in running order so much as is completed, and the company to have the right of redemption for ten years.

Chicago, Burlington and Quincy Railroad.

In regard to the project for extending the Burlington and Quincy railroad into Chicago from Aurora, it appears from the statement prepared by the Directors that the extension will make a saving of $30,000 per annum, and that the issue of bonds to build the extension was provided for in the Trust Mortgage made Jan. 1, 1858, made to secure a sum not exceeding $5,000,000. That mortgage says:

It is expressly agreed "that the bonds to the amount of $1,000,000 shall be applied solely and only to the construction of the road from Aurora to Chicago and its appurtenances, and that none of said bonds shall be issued or sold until it shall be deemed expedient to undertake said construction, and then specially for that purpose." "And it is further expressly agreed that no part of said bonds for one million of dollars shall be issued, or countersigned by the trustees, without the consent of a majority of the stockholders in interest at any annual meeting, or at any called meeting of the stockholders for the purpose, of which meeting at least six weeks notice has been given, or the consent in writing of a majority of the stockholders in interest, after a circular has been sent to the stockholders stating the necessity for, and asking liberty to make such issue."

Great Land Sales in Michigan.

The Detroit *Advertiser* says the St. Mary's Falls Ship Canal Company propose to sell at auction, on the 17th of June next, at East Saginaw, a large and valuable tract of land, embracing nearly 100,000 acres, mostly pine land, and also, on the 1st of July, at Muskegon, on Lake Michigan, about 24,000 acres of pine lands on the waters of the Muskegon. These lands were granted to the Canal Company by the State as a consideration for building the ship canal around the Falls of St. Mary.

Wissahickon, Roxborough and Plymouth Railroad.

The charter of this railroad company provides for the construction of a line from some point on the Norristown railroad (between School House lane and Manayunk) to Plymouth, in Montgomery county. The route will probably be up Ridge avenue, or as near this thoroughfare as it is possible to grade a road for the use of locomotives. Among the corporators are Charles Thompson Jones and Henry K. Smith. The charter is null unless work is commenced within three years.

Toledo and Wabash Railway.

The earnings of this road during the fiscal year ending August 31, 1861, were $993,005 18, against $848,981 40 for the year ending August 31, 1860—showing an increase in the past over the preceding year of $144,023 78. During the seven months which have elapsed of the present fiscal year, the earnings have been $720,438 30, against $525,119 75 for the corresponding period of the previous year—showing an increase in earnings of $195,318 55.

Lachine Canal Improvements.

We are informed that the inlet at Lachine is widened about 18 feet; the supply of water will therefore be greatly increased. At Cote St. Paul, the old locks, which have latterly been serving as a waste wear, are now taken out; and eight new gates have been substituted, each 4 feet by 6 feet, which will henceforth allow any quantity of water to pass which may be required on the levels below. The water is expected to be let in about the 1st of May.—*Montreal Gazette.*

☞ Railroad Companies will oblige us by sending us copies of their Reports as soon as they are issued.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers, (†) that the company is in default in its interest, S. F.," Sinking Fund. "var," that the bonds fall due at different periods

American Railroad Journal.

Saturday, May 3, 1862.

Financial Revulsions—How They are Brought About.

In the *Princeton Review* for April we find an elaborate article on "the nature of money, and of credit as its substitute," to some of the points presented in which it may be well to refer at this moment. It is not necessary to define, for the ten thousandth time, what *is* money, or why the precious metals have been preferred to all other substances for that purpose. The general reader may be supposed to have mastered the alphabet of political science; and we think the *Review* might have dispensed with it altogether. But there is one topic in connections with financial inflations which may not be so commonly understood; and to this the article in question does ample justice. Many persons suppose that these are brought about by paper money exclusively, instead of its being a mere subordinate agent in producing them.

The first and simplest agency at work in giving rise to inflations is the simple form of *book credits*; and in proportion to the number and extent of these, will probably be the magnitude of the collapse likely to follow. It is undoubtedly true that credits of this description for short periods, when the transactions between man and man are numerous, possess many advantages. They diminish the number of payments which would take place, and enable a smaller sum of money to suffice for the wants of the day. On the other hand they offer dangerous temptations to extravagance, speculating and roguery. In times of revulsion the failure of a few to fulfill their engagements is apt to generate universal mistrust, to the great disadvantage of the honest and the solvent debtor. As the volume of these accounts far exceeds that of the bank paper in circulation, the relative share which each contributes to bring about inflation and subsequent depression, may be readily estimated.

A second form in which credit becomes a substitute for money is as *bills of exchange*, liquidating transactions of a commercial nature between cities and countries, without the trouble, risk or loss arising from the shipment hither and thither of specie. Between places where this business is considerable the work of effecting these exchanges becomes a regular department of banking. Bills of exchange on leading houses in this city or London pass current by endorsement from hand to hand, answering all the purposes of currency. They are even drawn with the design of raising money, instead of asking loans from the banks.

A third form is the use of *bank-checks*. This easy arrangement enables a man to discharge thousands of dollars of indebtedness in the course of a day, without burdening himself with the specie or bank bills. At the same time, the sums lying on deposit constitute the life-blood of banking institutions. The accounts which are daily settled in this city by currency bear an exceedingly small ratio to those discharged by checks. The power of money is thus economized, as some steam engines economize water by condensing the vapor every time it is formed. But for these little paper contrivances, the millions of "circulation" issued by our banks would have to be doubled, trebled, and perhaps, quadrupled in amount.

It will be seen that as bank paper is a substitute for real money, so all these forms of credit are substitutes for bank paper, answering the same purpose in a limited circle, as the bank note answers the purposes of the gold dollar in a limited circle of country. To calculate the extent of a financial inflation, then, it will by no means suffice to compare the bank issues of this week with those of the last, or even to add to them the large sums of government paper coming into the market as currency. These are only the crests of the wave. There is, besides, an immense swell, which may not be taken into account by the general public; but is apt to be guessed at with more or less accuracy by the intelligent banker.

It will be perceived, too, that while each of these forms of credit offers certain advantages on the score of facility, all are liable to the same abuse. The banker may discount too freely to accommodate mere speculators; the dry goods merchant may trust too readily the plausible buyer, as too easy credence may be given to bills of exchange drawn for "kiting" purposes. The temptation to expand in every direction is very great, through cupidity, rivalry, sometimes necessity, and a too common belief that "to-morrow will be as this day and more abundant," since this day may be more abundant than yesterday.

How far the evil may proceed, before leading to a collapse, must depend on circumstances. In this country the usual check on over expansion is a great increase in the imports, bringing about an exportation of the precious metals to discharge the value due other countries. The article in question seems to regard this as the *sole* agent in producing the revulsions; but if so, it is an obvious error, as such crises would occur, when the causes producing them existed, whether or not one nation traded with another. But the general rule is doubtless ease, expansion, speculation, a rise in prices, large importations of merchandise, with exportations of specie, bank contractions, followed by a general panic and revulsion.

We pass over that portion of the article describing the influences which brought on the various

crises that have happened in this country and England, to consider *the antidote* offered to the mischief from prostration of credit. "This evil and its consequence," observes the *Review*, "can be removed only by removing its cause. Its cause is the excessive and crushing contraction of credit. Let that undue contraction be removed. Let the bank and bankers also control the loan market * * boldly resolve and proclaim that those who deserve credit shall have credit, and that really solvent houses shall have their ordinary accommodations. * * This of itself will generally at once relieve, and soon totally remove the pressure. It will kill the rising panic. It will restore sound commercial transactions to their wonted channels." In support of this view it refers to the "Orders in Council" to the Bank of England, removing the prohibition to issue notes beyond a certain amount; also to the relief experienced by the suspension of 1857, when our banks at once felt themselves enabled to expand their loans sufficiently to meet the wants of the country.

There is some sound advice in this; but it fails to meet the issue. In the first place, it does not define correctly the true origin of panics. Their prime cause is not "the excessive and crushing *contraction* of credit;" but its excessive *expansion*. The latter leads as necessarily to the former as the inordinate cramming of food into the stomach does to loss of appetite, and the subsequent loss of flesh. How far wide of the mark would be that physician who should prescribe a full regular diet to his patient under circumstances of the sort; though it might be quite true that the want of it had occasioned his shrinkage in bodily tissue. Equally far short is he who has no antidote to offer against times of commercial revulsion other than, "Lend to solvent persons as usual, regardless of the consequences."

It is true the banks were not, as they ought not to have been, prosecuted for suspending either in 1857 or 1861; but are we to infer from this that they never will be in case their notes are dishonored? The writer seems to believe as much, in which, however, few will sustain him. The banks were saved on both occasions, because there was a general crisis, which they did their utmost to prevent, and only failed because it was impossible. But let their paper go to protest on ordinary occasions, and they will find public forbearance assume a very different phase from that of last year and 1857.

In the next place, the nature of an unhealthy expansion is such that it must go on increasing, as the utterance of one falsehood requires that of fresh falsehoods to support it. The foolish speculator who calls for large accommodations this year will require larger support next year, and so on. The list of applicants is always on the increase. The probability is that the longer this abnormal condition exists, the more pernicious will be its effects when the crisis comes. The men who create panics are not the "solvent" class of dealers; but such as have managed to float along on the rising wave of general prosperity. When the door is shut in their face, they get up the loudest alarm. Ordinary bill-holders are next seized with the panic; and from these it is communicated to the depositors, as in 1857. It is very good advice to bank managers at such a time to keep "steady;" but what will steadiness accomplish, when every man has grown fearful of his neighbor, through the secret conviction that everybody has been going too fast? Canute bidding the sea retire was not the only man of eminence guilty of a miscalculation of means to ends.

No. To reach this root of bitterness we must dig deeper. We must condemn not "crushing contractions" in the hour of alarm, but foolish *expansions* of credit in seasons of prosperity. Admitting that the former is an evil in itself, it is such only as a reaction growing out of the latter. Let the banker acquire all possible steadiness of nerve in moments of danger; but let him rather strive to avoid this by withholding facilities to long credits in trade, even with the prospect of greater profits; let him discourage all reckless speculation in stocks, etc., the mere rise or fall of which bring no direct benefit to the community, also all "kiting" and other schemes of the sort for raising means, when the parties resorting thereto should be driven to the wall. And at this moment, when the money market is likely to be deluged with Government paper, with the uncertainties and dislocations attending a probable termination of hostilities at an early day, these remarks will not, we trust, pass unheaded.

New York Insurance Companies.

The third annual report of the state superintendent of the insurance department gives the following statistics respecting them: There are now ninety-five joint stock companies incorporated by this state. Their capital is $20,282,860; net assets, $23,568,054 76; premium income, $6,827,786 46, being $433,859 06, or 5.97 per cent. less than last year. The losses paid were $3,771,219 08, being $218,232 53, or 5.35 per cent less than in 1860. The dividends were $357,301 29 less. Of the companies, fourteen only received premiums amounting to over $100,000 each; four only over $200,000, and of one only over $300,000: As regards rates and reckless competition, the superintendent has the following just remarks:

Our companies must either gradually and carefully extend their line of business, and increase their capital and reserved funds, or allow the best portion of the insurance business of the country to pass into other and abler hands, more capable of understanding and serving the wants and necessities of the American people. * * * * The people are willing to pay fair and remunerative premiums, but they insist upon sound and reliable indemnity. The unfair and reckless competition of irresponsible and unsound companies has for several years tended to unsettle and disproportion rates; thus endangering alike the insurer and the insured. There is, however, now no good reason why our companies cannot become in fire—as they already are in marine and life insurance—among the best, if not the very best, in the world.

The premium income of the mass of our fire insurance companies is by far too small for their capitals and inadequate to the proper support of a separate and independent corporation. The experience of the Home, Security, Manhattan, Continental, Phenix, Lorillard, and other companies, has demonstrated that, with proper skill, tact, and sagacity, business can be increased and managed to an indefinite extent, with entire safety and even additional security to the company. We have now the machinery and organization in working order for nearly one hundred joint stock fire insurance companies. In the course of few years their business can be safely doubled and even quadrupled, without doubling or quadrupling the yearly expenses. Any considerable expansion of business must, of course, be mainly effected through the instrumentality of reliable, safe, and well-managed agencies.

Railroad Earnings for March.

Subjoined is a statement of earnings of Railroads for March. The result is fully as favorable, in the aggregate, as for February. The total increase is $333,209 83; the rate 13½ per cent. The few cases of decrease are owing entirely to local, or extraordinary causes. The earnings of Western roads would have been larger for the month, but for the large accumulations of produce at all the Lake Ports, which very materially checked operations. At several points, Milwaukee and Toledo for example, the warehouses were entirely filled up by the end of January. There were never before so large accumulations of grain at the depots in the interior. The amount in first hands is still very large, so that with a good demand, the railroads will have a lucrative spring and summer business. The pacification of the country will also have a favorable effect. If the rebellion as now seems probable should be suppressed within a few weeks, an impulse would be given to the internal commerce of the country which would add very largely to the earnings of our public works.

Roads.	1862.	1861.	Increase.

	$2,496,086 76	$2,162,876 93	$333,209 83

† Decrease. Increase 13½ per cent.

Buffalo, New York and Erie Railroad.

The following is a comparative statement of the earnings and expenses of the Buffalo, New York and Erie Railroad Company for the six months ending April 1:—

Earnings.	1862.	1861.
Passengers	$69,965 95	$52,948 18
Freight	356,176 60	223,069 85
Other sources	21,807 62	14,638 13
Total	$438,950 18	$291,650 66
Expenses.		
Maintaining road	$71,662 93	$48,008 30
Repairing machinery	52,460 69	34,846 97
Operating road	112,101 26	91,932 95
Total	$236,224 88	$174,787 32
Net earnings	202,725 30	116,803 34

This makes the increase for the six months $85,861. The net earnings of the period, $202,000, are more than sufficient to pay the interest on the

funded debt of the company for the entire year. The company has no construction account. The earnings for the first fifteen days of April show an increase of $9,284 on the same time last year.

The Reciprocity Treaty.—Mr. Galt's Report.

Mr. Galt, the Canadian Minister of Finance, has submitted a lengthy report on the Reciprocity Treaty, in reply to that which was lately presented in the House of Representatives at Washington, an abstract of which we have already given. In several of the points of issue made by the committee he has fairly driven them to the wall. The principal charge made against Canada was that of a breach of *the spirit* of the treaty by increasing the duties on manufactured articles imported; but as the United States Government has seen fit to pursue a similar course, Mr. Galt thinks our people had no right to complain. "When the United States," he observes, "are prepared to place their tariff on Canadian goods as low as our tariff is on theirs, it will be in a more logical position to make complaint." Besides, could we expect, he asks, that America should be favored in the levying of duties, at the expense of the mother country, which affords Canada protection?

To the charge of discriminating by differential duties against American vessels on the Lakes, Mr. Galt replies that Canada admits the registration of foreign vessels without charge; the United States do not. Canada allows American craft to pass through her whole system of canals to the ocean, free of toll or charge of any description; but no Canadian boat, even on payment of toll, is allowed to enter an American canal. He considers it questionable whether the General Government ever fulfilled its obligations to urge upon the State governments to remove that prohibition; at all events, it has never been removed.

Below we give some tables of Canadian commerce embodied in Mr. Galt's report. They differ in part from those given by the Committee of the House, partly because the years do not begin and terminate simultaneously:

STATEMENT showing the total value of the undermentioned articles exported to all countries and to the United States, during the years 1859, 1860 and 1861:—

1859.	Total Amount.	United States.
	$	$
Wheat, flour and corn	4,342,291	3,584,031
Other agricultural products	2,997,607	2,694,320
Timber and lumber	8,556,691	8,301,819
Animals	2,014,833	2,014,208
All other articles	5,191,056	2,327,941
Totals	23,102,378	13,922,314
1860.		
Wheat, flour and corn	9,564,484	6,483,994
Other agricultural products	4,694,741	3,529,805
Timber and lumber	10,051,147	3,846,611

1860	17,273,029	18,427,968	35,700,997
1861	21,069,388	14,386,427	35,455,815

* Epoch of the Reciprocity Treaty.

The report concludes as follows:

The Minister of Finance therefore respectfully reports that he cannot recommend your Excellency to submit the project of a Zoll-Verein to the favorable notice of Her Majesty's Government. But he considers that there are many respects in which it would be found beneficial to extend the operation of the Reciprocity Treaty with the United States, and he recommends that the subject be brought before the Imperial Government, with a view to such action hereafter as may meet with Her Majesty's approval.

Revival of Business at Nashville.

There is great briskness in the cotton market at present at this point. Loads are constantly passing through the city on their way to the river. One boat day before yesterday left with some two hundred bales. Buyers are scouring the country in all directions as far as the protection of the Federal lines extend, and sometimes even further. The planters are acting like men of practical sense, and are quick to trade. Good middling readily brings 16 and 17 cents in specie or U. S. Treasury Notes, and 22 and 25 cents in current Tennessee paper. There is no holding back on the part of the planters. They all fully appreciated the immense benefits which reviving trade will scatter over an almost bankrupt country. One thing has forced itself upon the minds of those even who were unwilling at first to admit the fact—interference with private property which has not been included in the rebellion will not be made by Federal troops. All parties now feel secure in this respect. The Surveyor of this port has kindly consented to furnish us with the amount of bales shipped here. Our editorial friends abroad may hail this as a sign of reviving commerce in Nashville.—*Nashville Union.*

Interesting Statistics on Life Insurance.

The editors of the *Wall Street Underwriter* have compiled an elaborate statement of the business of the life insurance companies located or having agencies in the city of New York in 1861. It is issued in a tabular form, well adapted for preservation, and ready reference in the counting-house or private dwelling, and can be obtained from Messrs. Grierson & Ecclesine at their office, 44 Wall st. It gives at one plain view every essential information respecting life insurance, and the magnitude of this growing interest in our midst will be somewhat startling to the majority of people.

The amount of policies in force is the immense sum of $164,000,000, and the gross assets of the American companies $27,000,000.

The synopsis or tabular statement gives a very clear view of the immense progress made by life insurance within the last twenty years. It is compiled from the annual returns filed in the insurance department at Albany, and embraces the accounts of nineteen companies—eleven belonging to New York City, two to Connecticut, two to Massachusetts, one each to New Jersey and Vermont, and two English companies. Excepting the New York Life and Trust, chartered in 1830, and which appears to do but very little life business, the oldest American company in the list is the Mutual Life of New York, organized in 1842, just twenty years ago, and which now shows an accumulated fund of over eight million dollars. The general results for all our city companies may be summed up thus:

Assets of eleven New York companies	$15,546,481 93
Premium receipts in 1861	2,591,842 33
Total income in 1861	3,275,299 10
Total expenditure for death claims, surrenders, dividends and expenses	1,919,682 18
Number of new policies issued in 1861	6,528
Amount insured thereon	$17,082,144 00
Aggregate number of policies in force	25,572
Total amount insured	86,174,661 00

There have been five companies since 1853; of these the Equitable stands at the head, having in force 1,188 policies, insuring $3,684,000.

The remarkable feature of the exhibit is the large number of policies which have been either surrendered or lapsed in 1861, amounting to no less than 4,759, and representing over seventeen millions of insurance. This is one of the bitter fruits of the rebellion. Nearly all the policies held in the South have fallen through, and of course the depression of business in the North has compelled many men here to give up their policies. Taking the "present value" of all policies and obligations by a standard recognized among actuaries, the aggregate liabilities of our eleven New York offices are set down at $9,467,843 50, which, being deducted from the gross assets, shows a surplus of over six million dollars: but the policies of three of the younger companies have not been valued. Allowing a liberal margin, however, for that item, the condition of our local companies appears to be highly satisfactory.

Taking in all the other State companies, the synopsis shows aggregate assets .. $27,186,241 10
Income 6,235,286 49
Expenditure 3,628,707 88
Total new business of 1861, 10,456 policies, insuring 28,606,144 00
Aggregate number of policies in force 54,185
Aggregate am't insured thereon .. 164,368,646 00

The English companies named in the return are the Liverpool and London and the Royal, both represented in this city and both showing abundant capital and extensive business. The synopsis from which we extract these general results shows the amount of business transacted in New York State by other State and English companies, and supplies "Notes Explanatory of Dividend and Premium Systems" of all the companies.

The Union Bridge Across the Schuylkill River on the Delaware Extension of the Pennsylvania Railroad.

The Union Bridge over the Schuylkill river on the Delaware Extension of the Pennsylvania Railroad consists of two permanent spans and one pivot span, each of the following dimensions:

Length of span. ..... 191⅓ feet.
Width in clear ..... 12½ "
Width from centre to centre of trusses. 13½ "
Height from centre to centre of chord. 19 "

There are in each span 20 panels of 9 feet 5¾ inches each. The system adopted in the permanent spans consists of the following essential parts:

Upper chords of cast iron, to resist compression, octagon in form, and terminating in rectangular abutting surfaces at the junction over the posts.

Lower chords, consisting of a series of eye-bars, of hammered iron, to resist tensile strains and support the roadway. Posts formed of two rolled semi-octagon bars combined and terminating in cast iron bases and capitals.

Square suspension diagonals of wrought iron, inclined at an angle of 45°, provided with loop at lower end to receive the connecting pin, and an enlarged end with screw and nut at upper end for the purpose of adjustment.

The end of the rods being upset so as to give a full section exclusive of the thread of the screw. Lateral struts and truss braces of cast iron; and wrought iron horizontal diagonal rods, for lateral adjustment.

The pivot span is of the same general dimensions and appearance as the permanent spans; but to render it self-sustaining when swung clear of the end supports, some peculiarities in design were rendered essential. The upper and lower chords are each composed of rolled iron beams of I section, connected at the joints by wrought iron splices accurately fitted and securely riveted. They are thus adapted to resist tension or compression. This structure is supported over the centre pier by a cylinder 24 feet in diameter, 4 feet 2 inches high, composed principally of boiler iron. The cylinder is connected by 28 diagonal rods with a central cylinder resting upon anti-friction rollers and a large cast iron cone placed upon the masonry. The small wheels running between the circular track on the masonry and the lower chord of the large cylinder prevent oscillation in the bridge while it is being turned on the pivot. The operation of turning is effected by means of a simple lever rack and pinion.

A uniform load of 2,400 pounds per lineal foot, exclusive of the weight of the structure will only produce effects equal to one-sixth of the breaking weight.

The materials in the three spans, exclusive of the cylinder, pivot and gearing, will average:

565 lbs. wrought iron per foot.; 835 lbs. cast iron per foot—total 1,400 lbs. per foot.

The bridge over Sutherland Avenue is also of iron—a single span 80 feet 2 inches in length—divided into 14 panels. Width 13 feet 6 inches; height 7 feet 9 inches.

Materials—266 lbs. wrought iron per foot.; 492 lbs. cast iron per foot—total 758 lbs. per foot.—*U. S. R. R. and Mining Register.*

The Rosendale Cement.

Readers of the Railroad Journal will have perused the advertisement of the Rosendale Cement Co., whose works are at High Falls, Ulster County, in this state. In the building of permanent edifices, such as bridges, depots and the like, it is all important that the best kind of cement be employed. Unfortunately while most men are able to form an intelligent opinion on the subject of stone, brick or wood, very few can test the relative merits of common lime mortar and that made from cement. Only when walls, arches or piers give way can the defects of the substance made use of for this purpose be discovered. But this is too late to rectify the mistake made.

Among the many testimonials on behalf of the Rosendale Cement we would refer to one from an engineer, now a distinguished commander in the United States army. We are not yet permitted to give his name, as the officer himself may see fit to publish the result of several years' observations on this and kindred topics. He says: "Cement is superior to lime for all building purposes, where strength, handsomeness and adhesiveness are required, in the ratio of three to one when the mortars are more than one year old; when under one year *they are more than four to one.*"

Among the numerous public works of the United States in which this cement has been used in large quantities we might instance the Treasury Extension, the Post Office, the Patent Office and the Capitol Extension, at Washington; also Forts Taylor, Jefferson, Schuyler, Hamilton, Richmond, Tompkins, and the one in course of erection at Sandy Hook. The most permanent works on our leading lines of railroad and canal have made use of it for building purposes.

The Rosendale Cement is *light colored*, by which it can be readily distinguished from all others. The beds from which it is taken are found in Ulster County, extending from the Hudson river along the valley of Rondout creek for several miles. The quality made at these works has no superior, either in this country or Europe. Messrs. Delafield & Baxter are the agents. Their office is at 102 Wall street in this city. See the advertisement.

New York and Harlem Railroad.

The receipts of the Harlem railroad for the first three months of this and last year were as follows:—

	1861.	1862.
January	$103,494 63	$100,922 75
February	88,201 46	96,939 38
March	88,790 72	103,020 32
Total	$280,486 81	$300,882 45
		280,486 81
Total inc. for three months of 1862..		$20,395 64

The Harlem Company did not run any express trains to Albany this year, resulting in a great saving of expenses. The way travel and freight has largely increased, and to this cause alone is to be attributed the increase of freight. The bill for opening Madison avenue, passed by the Legislature on 15th April, will enable the Harlem Company to lay down their track for their Fourth avenue cars to Seventy-ninth street, on the Madison avenue, and when finished will greatly augment their income. This is a very important city improvement, and will prove a very great accommodation to the public visiting Central Park, and is much needed. The Harlem Company have the right to run their cars on this avenue for thirty years, under the act of the Legislature passed April 16, 1859.

Interest and Dividends.

Six months' interest on the First Mortgage Bonds of the Madison and Indianapolis Railroad Company will be paid on presentation of the certificates issued therefor, at the office of John and Samuel Ferguson, No. 35 Pine st.

The interest due May 1, on the Mortgage Bonds of the Cleveland and Pittsburg Railroad Company will be paid at No. 25 William st., by H. C. Kingsley.

The coupons of the First Mortgage Bonds, and bonds of 1867, of the Harlem Railroad, will be paid at the office corner of Twenty-sixth street.

The interest on the Sinking Fund Bonds and Second Mortgage Bonds of the Michigan Southern Railroad Company will be paid at the Bank of North America. The interest on the First Mortgage Bonds will be paid at the office of the Company.

The May coupon on the Second Mortgage of the Toledo and Wabash road will be paid at the Bank of the Republic.

The coupons of the Evansville and Crawfordsville Railroad Company, due on the 1st of May next, will be paid at the office of the Farmers' Loan and Trust Co., 56 Wall st.

The coupons on the 7 per cent. mortgage bonds of the Long Island Railroad Company will be paid at the Bank of the State of New York.

The interest coupons due May 1, 1862, on the Second Mortgage Bonds of the Buffalo, New York and Erie Railroad Company will be paid on presentation at the Bank of Commerce.

Railroad Earnings—Monthly.

The earnings of the Northern Central railway for March, 1862, were as follows:

From freight	$102,175 66
" passengers	33,319 93
" mail	2,175 00
" express	3,259 17
" U. S. and State of Pennsylvania	17,767 27
" miscellaneous	3,130 92
	$161,827 95
Expenses	72,728 13
	$89,099 82

The gross revenue in March, 1861, was $77,796 44; and the expenses $53,775 88—showing an increase in the former of $84,031 51, and in the latter of $18,952 25. The company has added to its rolling stock during the month, three new first class locomotives, and twenty-three new coal cars.

North Pennsylvania Railroad Depot.

The workmen are still busily employed in preparing the ground for the erection of the new passenger depot for the North Pennsylvania Railroad. The lot on which the depot is to be erected extends from Germantown avenue back to Cadwalader street, and between Thompson and Master streets. The depot will be a short distance from the point at which the cars are attached to the locomotive, and may be reached by means of the Second and Third Streets Passenger Railway cars, which will pass the west front; and also by the Fifth and Sixth street cars.—*Phila. News.*

The Suez Canal.

The number of laborers now employed on the Suez Canal is 22,000; but a letter from Alexandria states that if this force can be increased to 40,000 during the months of May and June, the waters of the Mediterranean can be let into the works as far as Timsah by the middle of July. As the waters of the Nile have already been brought to that point, the canal might then be regarded as complete. The introduction of fresh water into that saline region has been quite successful, and promises to be productive of many advantages other than the supply to the canal. There seems no reason to doubt that this vast enterprise will be completed before the close of the present year, adding another to the many revolutions in Eastern commerce.

Allegheny City Bonds.

We understand that the Bond Committee of Allegheny City, acting in connection with the Finance Committee of Councils, have succeeded in effecting an arrangement of her railroad bond indebtedness. To that arrangement, creditors representing nearly all of the debt, have acceded. The whole railroad indebtedness of that city amounts to $400,000 principal, and about $100,000 back interest. Under the new arrangement the city will issue new bonds, dollar for dollar, at 4 per cent. interest, which are irredeemable, except through the operations of a sinking fund, provided for in the act. The coupons for back interest, up to Jan. 1, 1862, will be purchased with Pittsburg, Fort Wayne and Chicago Railroad stock, at par.

Michigan Southern and Northern Indiana Railroad.

At the election for directors of the Michigan Southern and Northern Indiana Railroad, held in Toledo on the 23d ult., the gentlemen comprising the old board were re-elected, as follows:

E. M. Gilbert, Utica, N. Y.; Henry Keep, New York; Allan Campbell, New York; Albert Havemeyer, New York; Milton Courtright, New York; Ramilton White, Syracuse, N. Y.; Nelson Beardsley, Auburn, N. Y.; Wm. Williams, Buffalo, N. Y.; Stillman Witt, Cleveland, Ohio; John S. Barry, Constantine, Michigan; Philo Morehous, Elkhart, Indiana; M. L. Sykes, Chicago, Illinois.

☞ The Halifax *Sun* says that from 1,045 lbs. of quarrtz taken from the mines at Sherbrooke, Nova Scotia, there were obtained 7¾ ounces of pure gold.

REFRIGERATOR CAR FOR SALE.

A WELL BUILT CAR SUITED FOR PRESERVing freight in both hot and severely cold weather or for ordinary freight purposes, for sale low. Apply at 64 Wall st., basement. 1t*18

REMOVAL.
P. W. GALLAUDET,
NOTE BROKER,
HAS REMOVED FROM 11 PINE ST., TO
No. 1 WALL ST., corner Broadway.

WANTED, a situation as Foreman Blacksmith by a man who has had 17 years experience in railroading, is a sober man and can give unexceptional reference; has had a very large experience in Frogs, Switches and Rail mending and welding. Address BLACKSMITH, at the office of this paper.

VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.
Address HENRY RUTTAN,
Coburg, Canada.

REMOVAL AND CHANGE OF NAME.

THE business heretofore conducted by A. BRIDGES & Co., at 64 Courtlandt st., will be continued by the same parties hereafter under the firm of—

BRIDGES & LANE,
at 50 Courtlandt, corner of Greenwich st.
New York, March 31, 1862.
See Advertisement. { ALBERT BRIDGES. JOEL C. LANE.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

12.	" 18 "	1 to 1	24.	" 32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, May 10, 1862.

North Pennsylvania Railroad.

The earnings of this road for the fiscal year ending November 30, 1861, were:

From passengers	$138,096 49
" coal	101,375 62
" pig iron	7,855 93
" Cattawissa lumber	4,057 20
" miscellaneous freight—local	79,373 47
" " " —through.	25,571 89
" mails	2,756 00
" rents, etc	5,138 86
	$364,225 46

And the expenses were:

Maintenance of way	$24,520 56	
Motive power	57,245 54	
Maintenance of cars	13,540 61	
Conducting transportation.	50,276 64	
General expenses	16,518 28	
		162,101 63
Net earnings—55½ per cent		$202,123 83

The decrease in gross earnings has been $25,-896 77; in expenses, $14,566 68; and in net earnings, $10,830 09. The interest chargeable to the business of the year is $200,962 55. The construction account has been increased $4,456 33, for filling up temporary bridge near Gwynedd; and the equipment account $12,210, by the addition to the rolling stock of one first class locomotive and one passenger car. The real estate account has been decreased by the sale of property at Sellersville, Pa., and Waverly, N. Y., neither of which were required for the business of the company. The property at Waverly was purchased for depot purposes, and has been re-conveyed to the former owner for the price that was paid for it, viz: $1,000 in cash and 40 shares of the capital stock of the company. The stock having been returned and cancelled, the capital stock account stands $1,870 less than at the date of the last annual report, $130 having having been received from instalment account. The right of way account has been increased $6,387 39 by the settlement of land damage claims to that amount. The funded debt has been increased $10,000 by the issue of that amount of chattle mortgage bonds, in payment of rolling stock. The interest account for the current fiscal year will be about $188,410.

CONDENSED BALANCE SHEET.

Capital stock		$3,147,130 00
Instalment account		6,775 00
Six per cent. bonds		2,500,000 00

Stores on hand	20,714 89	
Profit and loss	237,634 22	
Cash on hand	20,795 62	
		$6,205,067 31

The company have 18 engines, all of which are in good running order. The number of miles run with passenger trains during the year was 166,-359, by freight trains, 80,703—total, 247,062; at a cost for repairs of $10,818 45; for fuel, $19,-973 25; for stores, $1,684 59. The quantity of milk received at Philadelphia was, 1,126,114 gallons, producing $19,773 91. The number of passengers carried was 308,329; number carried one mile, 5,294,850—equal to 96,271 through passengers. Tons of freight moved one mile, 7,766,905:

President—FRANKLIN A. COMLY.

Directors—John Brock, John Jordan, Jr., Algernon S. Roberts, I. Gillingham Fell, S. Morris Waln, W. C. Ludwig, Ellwood Shannon, E. C. Knight, W. L. Hirst, Alfred Hunt.

Treasurer—WM. WISTER.

Secretary—EDWARD ARMSTRONG.

Engineer and Sup't—SOLOMON W. ROBERTS.

Chief Clerk—CHARLES WILLING HARE.

The Pacific Railroad Bill.

The bill which on Tuesday passed the House of Representatives by a vote of 79 against 49, constitutes the following persons corporators, viz:

Isaac Sherman, Dean Richmond, Royal Phelps, William H. Ferrey, Henry A. Paddock, Lewis J. Stancliff, Charles A. Secor, Azariah Boody, of New York; John Edgar Thomson, Benjamin Haywood, Joseph H. Scranton, George W. Cass, of Pennsylvania; Noah L. Wilson, Amasa Stone, S. S. L'Hommedieu, of Ohio; Oliver D. Filley, R. W. Wells, Willard P. Hall, Armstrong Beatty, of Missouri; S. J. Hensley, Peter Donahue, C. P. Huntington, T. D. Judah, James J. Regan, James Beatty, of California; John D. Campbell, R. N. Rice, of Michigan; William F. Coolbaugh, Lucius H. Langworthy, Hugh S. Reed, Hoyt Sherman, of Iowa; William B. Ogden, Charles G. Hammond, Henry Farnum, John Evans, of Illinois; William H. Swift, Samuel T. Dana, John A. Bertram, of Massachusetts; Franklin Gorin, of Kentucky; James Dunning, of Maine; William S. Ladd, A. M. Berry, of Oregon; William Bunn, Jr., Levi Sterling, of Wisconsin; Charles Paine, Thomas A. Morris, Jesse L. Williams, of Indiana; Thomas Swan, Chauncey Brooks, Edward Wilkins, of Maryland; Henry T. Welles, David Blakely, of Minnesota; W. H. Grimes, J. C. Stone, Chester Thomas, of Kansas; Charles A. Trowbridge and Ransom Gardner, of Michigan.

With these are associated some other persons, making 75 in all, to whom will be joined five Commissioners, to be appointed by the Secretary of the Interior, who shall have the usual corporate rights and privileges, and be known as "The Union Pacific Railroad Company." They are authorized to lay out, construct and operate a continuous railroad from points on the 102d meri-

dian of west longitude to the Eastern boundary of Nevada territory. It will be seen that both Kansas (or Nebraska) on the East and California on the West are left out of the programme altogether, the right across their territory being left to the local authorities. It is probably also taken for granted that the people of those States will be able to raise funds sufficient to construct the road within their respective limits, independent of all aid from the public treasury.

The capital stock of the company will consist of one hundred thousand shares of $1,000 each, making $100,000,000 in all. The right of way is conceded for 200 feet on each side of the line. The rails and all other iron used must be of American manufacture. Work must begin within two years from date. There is no particular route designated, beyond that which is the most direct, central and practicable. The Eastern division is to connect with the Leavenworth, Pawnee and Western Railroad and Telegraph, and the Western to connect with the Central Pacific Railroad of California.

The company are thus left free to pass the Rocky Mountains by the South Pass, and thence proceed by Salt Lake City, or to run their road through the Pike's Peak gold region, where it is claimed that a practicable passage can be obtained without much difficulty. It is understood that in the event of a disagreement about the point of crossing, the Secretary of the Interior shall have the right to settle the matter.

The aid extended to this work by the General Government is $16,000 per mile, if we are to believe the telegraph; but we suspect there is an error in the sum mentioned. This is made payable in bonds of $1,000 each, running thirty years, and bearing six per cent. interest, which shall be delivered to the company as soon as each section of forty miles is completed and accepted. To secure their payment the company is required to give a lien upon the road. The government shall have the preference at all times in the transportation of mails, troops, munitions, &c., at fair and reasonable rates of compensation, not to exceed those paid by private parties, such compensation being applied to the payment of bonds and interest until the whole shall be discharged. In doing so, it may use at par the bonds, notes and other evidences of debt issued by the government. Provision is also made for the application of five per cent. of the net earnings, after the completion of the road, to liquidate this debt.

Stretching across eighteen degrees of longitude, the length of this line would be probably 1,200 miles. If the general government be disposed to aid it at all, we think $60,000 per mile would be an offer much nearer the mark than $16,000. Considering the national objects sought after through the construction of a railroad to the Pacific, we hold that when the country stretches forth its hand, it should do so in no such paltry manner as has been announced. The United States have vast interests at stake in the matter, requiring them probably to undertake the work themselves, if individual capitalists cannot be found to do so. For Congress to pass a bill, appropriating less than one-sixth part of the estimated cost of construction, and this secured by liens and services, is in effect to say that we shall have no overland way for ten years to come. If Congress be in earnest in the matter, it must act with a little more liberality than that. We shall print the bill in full, should it become law.

Finances of New York City and County.

The following is a synopsis of the report of the Comptroller submitted at a meeting of the Board of Supervisors on the 29th ult.:

Amount in hands of country treasury Dec. 31, 1860		$642,678 79
Receipts from all sources during the year	$11,898,084 74	
Less amount transferred to city treasury for the corporation's proportion of collection from taxes, and interest thereon	5,894,239 90	
		$6,503,844 84
Total		$7,146,523 63
Amount of warrants on the treasury paid and returned to the comptroller		6,847,947 83
Balance in treasury Dec. 31, 1861		$298,575 80
The receipts from taxes were	$10,063,803 68	
Less transferred to city treasury	5,871,118 56	
		$4,192,685 12
Receipts from interest on taxes, fees of public officers, and fines and penalties		65,599 72
Receipts from excise license fees		21,960 00
Receipts from loans		2,223,600 00
Total		$6,503,844 84
The expenses for support of county government were		$697,715 54
For erection of public buildings		281,497 33
Support of Metropolitan police		1,674,290 00
Quota of State taxes		2,129,494 57
Interest on loans		71,584 29
Redemption of county revenue bonds of 1860 and 1861		2,048,500 00
Amount paid to city corporation		59,925 00
Paid to New York State Inebriate Asylum		255 00
Total		$6,963,261 73

According to the annual return of the Comptroller of Taxes and Assessments, the valuation of property subject to taxation within the City and County of New York, for the year 1861, was as follows:

Real estate		$406,955,665
Personal estates belonging to residents	$160,816,530	
Personal estates belonging to non-residents	13,807,776	174,624,306
Total		$581,579,971

As corrected and adopted by the Committee on annual taxes the amount is as follows:

Real estate	$406,882,790
Personal estate, as above	174,624,306
Total	$581,507,096

—showing a decrease of $72,875 in the valuation of real estate as corrected by the Committee on Annual Taxes.

Taxes due from incorporated companies, revisions and corrections of taxes, discount on taxes, apportionments of taxes on real estate, taxes on personal estate, valuation of property by the State Board of Equalizations, and other matters, are considered at length by the Controller. In conclusion the Controller says:

The extraordinary burdens to which our citizens are to be subjected for a time, by reason of the Southern rebellion, and their impaired ability to bear them, consequent upon the derangement of the business of the country, make it the duty of those who have the power, to reduce the public expenses to the lowest amount, consistent with an efficient administration of the Government. The Controller will at all times take pleasure in aiding to the extent of his ability, to carry into practical effect all measures which may be adopted by the Board of Supervisors, to accomplish that object.

Fitchburg Railroad.

The income and expenses of this road for the fisaal years ending November 30, 1860 and 1861, were as follows:

Income:	1860.	1861.
From passengers	$239,978 26	$214,517 82
" freight	382,992 70	307,134 38
" mails	9,900 00	9,941 67
" rents	8,644 75	8,788 67
" interest	9,928 06	7,781 44
" miscellaneous	16,583 01	.....
	$663,021 78	$543,158 98

Expenses:	1860	1861.
Repairs of road	$87,167 00	$83,219 46
" locomotives	40,700 27	32,635 61
" buildings, etc.	26,782 94	18,072 75
" bridges	23,544 10	7,153 72
" cars	24,240 72	24,555 57
Fuel	36,693 74	39,208 65
Freight expenses	55,599 63	52,076 68
Passenger expenses	26,665 80	27,264 04
Switchmen, watchmen, etc.	9,551 69	10.277 93
Oil and waste	6,854 21	6,619 80
Removing snow and ice	1,350 42	4,504 82
Taxes and insurance	5,495 27	6,982 51
Gratuities and damages	1,757 85	3,075 78
Salaries, office and law expenses	12,596 78	10,457 50
	$359.010 42	$326,104 32
Net income	$304,011 36	$217,054 66
Dividend 6 per cent	212,400 00	212,400 00
Surplus	$91,611 36	$4,654 66
Surplus last year	247,307 03	204,644 37
Total surplus	$338,918 39	$209,299 03

At the commencement of 1861, the directors report that the company stood pecuniarily free from debt, having paid during the year 1860, $132,663 41 for the purchase of the Peterboro' and Shirley Railroad, and also its $100,000 note, which fell due in June of that year. There remained in the treasury subsequent to these payments the wherewith to meet the January dividend of 1861, the amount due connecting roads, and the unclaimed dividends, leaving a surplus of $42,702 86 on hand to begin the year with. The company likewise possessed assets not required for railroad purposes, worth $25,285 04, and a further sum of $30,456 47 invested in fuel, iron, lumber, etc., the value of which is not included as surplus or assets.

At the close of the year, the corporation had $205,603 99 of cash and cash funds on hand, to meet the liabilities of the company, consisting of dues to connecting roads, and unclaimed dividends, together with the January dividend of 1862, the aggregate of which sum was $160,801 92, leaving, after the payment of these, a surplus in the treasury of $44,802 07. The company have also assets not needed for railroad purposes, worth at least $20,618 42, and fuel, iron, lumber, etc, valued at $37,678 54.

This corporation, in common with others, has

suffered in its business the past year, as the gross receipts prove—being $119,862 80 less than those of the previous year. The expenses, however, are $32,906 10 less—making the diminution in net earnings only $86,956 70.

The following statement will show the financial condition of the company November 30—

	1860.	1861.
Construction	$3,540,000.00	$3,540,000.90
Cash and cash funds	137,419.60	176,878.28
Notes receivable	27,182.88	24,559.04
Locomotives loaned Trustees of R. & B. R. R. Co	17,200.00	12,900.00
Fuel	20,599.25	27,362.75
Materials	9,857.22	10,315.79
Real estate	8,085.04	7,718.42
Freight uncollected	4,061.46	
U. S. Mails	2,980.46	4,166.67
	$3,767,385.91	$3,803,900.95
Capital stock	$3,540,000.00	$3,540,000.00
Profit and loss	203,644.37	209,299.03
Unclaimed dividends	3,618.00	3,645.00
Connecting roads	19,123.54	50,956.92
	$3,767,385.91	$3,803,900.95

The main line, extending from Boston to Fitchburg, is 50.98 miles in length, with double track the entire distance. Length of branches owned by the company 30.93 miles. Aggregate length of sidings and other tracks, excepting main line and branches, 22.63 miles. Cost of road, $3,189,850 68. Cost of equipment, $350,149 32.

The equipment consists of 29 engines, 28 passenger cars, 10 baggage cars, 356 eight-wheel and 298 four-wheel merchandise cars, and 40 gravel cars.

The number of miles run by engines with passenger trains was 189,790; with freight trains, 152,806, with other trains, 7,188—total miles run, 349,284.

Number of passengers carried in the cars, 688,157; number carried one mile, 10,420,495. Tons of merchandise carried in the cars, 325,500; do., carried one mile, 7,789,515.

The following statement will show the earnings, expenses, etc., from 1844 to 1861 inclusive:

	Gross earnings.	Operating expenses.	Net earnings.	—Divid'd— Am't.	p. ct.
1844	$42,759	$15,924	$26,835	*nil*	*nil*
1845	203,996	78,333	125,662	$46,000	4
1846	286,645	117,447	169,198	154,295	10
1847	390,737	161,433	229,303	176,340	10

At the annual meeting of the stockholders held in Boston on the 28th of January, the old board of directors were re-elected, viz:

President—JOHN J. SWIFT.

Directors—John J. Swift, A. Crocker, W. E. Faulkner. P. B. Brigham, and Wm. A. Brigham.

Treasurer—M. D. BENSON.

Superintendent—W. B. STEARNS.

Toledo and Wabash Railway.

We gave in a recent number an abstract of the report of this Company for the fiscal year ending August 31, 1861, in which the earnings of the road from passengers, freight, mails, express, rents, etc., were stated at $993,005 18 against $848,981 40 for the preceding year—an increase of $144,023 78. Attached to the report is an Appendix, in which the earnings for the five succeeding months, viz: from September to January inclusive, are stated at $617,290 50 against $415,560 44 for the corresponding period of the previous year, showing an increase of $201,730 06. The report says:

The most conspicuous and flattering feature of our business during this period and the one which must communicate to all parties in interest, the highest degree of encouragement and satisfaction, is the extraordinary and unprecedented increase of the freight traffic, both local and through. The tonnage transported and the revenues resulting therefrom have been altogether the largest yet known in the history of the road, and the fact that this great increase has been principally obtained from the transportation of grain, which is a business possessing the characteristics of stability and permanence, is certainly encouraging and should be regarded as the earnest of a future of prosperity and success.

The grain traffic of the road, during the period under review, has been unprecedently large, and now constitutes the most important and staple commodity of transportation. This branch of business has increased and developed with a rapidity far surpassing all previous calculations, and it promises to continue to increase for years to come, to an extent which when fully developed, it is impossible to foresee or estimate, since it will be only limited by the productive capacity of those fertile regions, the annual improvement of which surpasses belief.

The following statement indicates the comparative increase of the grain traffic for the periods named:

	1859 and 1860.	1861 and 1862.
September	461,102 Bushels.	895,514 Bushels.
October	534,074 "	941,952 "
November	198,567 "	677,225 "
December	23,706 "	238,944 "
January	123,377 "	125,450 "
	1,335,826 "	2,879,085 "
		1,335,826 "
Total increase for 5 months		1,543,259 "

For this large and gratifying increase of our grain traffic, we are mainly indebted to our connections with the Great Western Railroad and the Toledo, Logansport an Burlington Railroad. The value and importance of these great auxiliary lines as feeders to our road, cannot be overestimated, and it must be peculiarly gratifying to those who at an early day foresaw the imperative necessity and incalculable advantages to be derived from these alliances, to be assured that their warmest and most ardent predictions are more than realized. The revenues of our road, during the month of August, derived from the business received from these two thoroughfares, was over sixty thousand dollars, and yet large as this sum may seem, it is no indication or test as to what it might have been, had we possessed facilities to move all the freight that was pressed upon us. For the first few years after the opening of our road, it was found somewhat difficult to attract or draw the produce and trade of this great centre of industrial power, eatward, over our route, as it involved the dissolution and severance of old and established business connections, and the formation of new ones. But, for the past two years, the immeasurable superiority of Toledo as a market or as a point of transhipment upon the lake, together with the advantages of less distance, and hence greater despatch, has had its natural and legitimate effect upon all the important shippers upon both of these connecting roads, and, accordingly, nearly all of their freight now tends towards Toledo, its natural channel and outlet, and from which it cannot hereafter be easily diverted.

The trade both in grain and rolling freight from these connecting roads is by no means as large as it would have been had we possessed the requisite equipment for moving it. Although the local traffic of our line was somewhat crippled, during the autumn, to afford cars to Illinois shippers, yet more than a million of bushels of grain, awaiting shipment, was left over at the various warehouses, and could not be brought forward before the closing of lake navigation. The loss of our road, from this cause alone, could not have been less than one hundred thousand dollars, during the three months preceding December 1st, rendering it fully apparent that the facilities of our road, for transporting and handling freight, is meagre and limited, and that a revenue exceeding that of the past year can only be earned by a judicious and timely investment in extending those facilities.

In view of this urgent and pressing demand for further equipment, a contract for four passenger engines, to weigh about twenty tons each, has been made, at a cost of $8,500 each, also, a switching engine, at a cost of $4,500. These engines will immediately relieve heavy engines, weighing from twenty-five to thirty tons, and suitable for freight business, while they will be abundantly able to perform the service required of them. A contract has been made for the purchase of fifty first-class box freight cars, to be delivered in April; and materials have been procured for building one hundred more at the shops of the company, at Fort Wayne, where, it is believed, all cars needed in future can be built more economically and of better workmanship than those obtained elsewhere.

In order that our large freight business should be economically and successfully transacted, it is indispensable that the track should be maintained in a thorough and efficient condition, which must necessarily involve some considerable outlay. To meet this requirement, 700 tons of new and heavy rails have been laid down since September first, and 1,000 tons more purchased to be delivered early the coming Spring. Several temporary shops have been provided where the process of mending defective and worn rails will be carried on with all practicable energy until the whole track is thoroughly restored.

That portion of the track between Defiance and Fort Wayne, originally laid upon a soft and treacherous soil, and without any ballast, has, despite much labor and care, continued in such a rough condition as to occasion serious detention to trains, especially during the wet portion of the seasons. For the purpose of removing this inconvenience, a gravel pit has recently been secured at an accessible point, and containing an abundance of material, and as soon as the frost leaves the ground, work will be commenced in the pit and prosecuted effectively during the Spring and Summer months.

The important increase of the business of the road, during the past few months, has furnished sufficient means to enable the company to discharge all interest obligations upon its funded debt, excepting such as is fundable or otherwise provided for.

The installment of coupons of the Sinking Fund Bonds, maturing on the 1st day of November, were promptly paid on presentation, and the second installment of principal on the Funded Coupon Notes, together with the accrued interest thereon, and falling due at the same time, were likewise paid at maturity. The entire amount of money required to pay off the coupons of the first mortgage bonds, maturing Februry 1st, 1862, was placed on deposit in the city of New York, in anticipation of their maturity, which completes the adjustment of all coupon indebtedness of every character. thus placing the company in a financial position not hitherto occupied for many years.

The recent success of the road has had the favorable effect of inducing the holders of outstanding coupons which are fundable, to present them for cancellation and exchange, into securities pro-

vided for their redemption. Of coupon, numbers 8 and 9, originally attached to the first mortgage bonds, and amounting to $238,000, there remains outstanding, with accrued interest added, only $5,423 95, and of coupons, numbers 2, 3, and 4, of the second mortgage bonds, and which are convertible into sinking fund bonds all have been presented for redemption excepting $37,537 50, showing that within the past four months, about $32,000 of these coupons have been redeemed.

During the late fiscal year, a large portion of the earnings having been employed in the purchase of equipment, a concession was asked of the holders of the second mortgage bonds, to the extent of converting their coupons, maturing on the 1st days of May and November, 1861, into like bonds of which the company held nearly a sufficient amount to satisfy both installments. The process of converting these coupons into second mortgage bonds, commenced early in the autumn, and before the close of the year, over three-fourths of the gross amount had been presented and cancelled, affording grounds of hope that the residue will be presented at an early day, and the liability be thus finally extinguished.

Trade and Commerce of Toledo.

We have received a copy of the Annual Statement of the Trade and Commerce of Toledo for the year 1861, from which we learn that the Erie Railroad Company own six lake propellers, which form a daily line between Toledo and Dunkirk. In 1861 these propellers made 204 trips, and carried from Toledo 87,466 tons freight. The New York Central R. R. Co. own thirteen lake propellers, which ply between Toledo and Buffalo, and which, in 1861, made 248 trips, carrying from Toledo 128,407 tons of freight. The Northern Transportation Company own fifteen lake propellers, eight of which are engaged in the Upper Lake trade, seven being employed between ports on Lake Erie and ports on Lake Ontario. In 1861 three of this Company's boats were detailed for the line from Toledo, which three boats made 56 trips from that port, during the season of navigation. These boats carried from Ogdensburg and Oswego to Toledo 1,233 tons of merchandise in 1861. The report says:—

The location of Toledo is, fortunately, highly favorable in many respects for the growth of a large city. It embraces both sides of a fine harbor, averaging one-third of a mile in width and several miles in length. Indeed, the whole length of the bay and estuary, from the lake to the foot of the rapids, eighteen miles, may be set down as harbor room for Toledo, when its growth shall require it. The banks of this harbor rise directly from the water to an elevation of fifteen feet, in the bay, rising to sixty-two feet, at the foot of the rapids at Maumee City, with a gradual rise towards the interior about in the same proportion. The harbor affords good facilities for navigation. It is easy of entrance; has a depth of water ranging from twelve to thirty feet; is well protected from high winds; is little affected by the river floods, which rarely rise more than five or six feet above ordinary lake level; and never suffers injury to its shipping from the breaking up of ice on the river. This exemption it owes to the distance (9 miles) from the foot of the lower rapids of the Maumee, and to the great width of the river which admits lake tide to the rapids.

A short account of the canals and railways which have their lake terminus in Toledo, will give many readers, hitherto uninformed respecting them some idea of the advantages which these artificial channels have added to its commercial power, present and prospective.

Practically considered, these canals are two, connecting the Ohio river, at Cincinnati and Evansville, with Lake Erie at Toledo. They unite seventy miles above Toledo, whence the main trunk, six feet deep and sixty feet wide, becomes common to both, down to its entrance into the harbor, near the centre of the city. 1. The *Wabash and Erie Canal* was first constructed. It passes along the valleys of the Maumee and Wabash rivers, in a southwerly course, from Toledo to Terre Haute, and thence south across the country to Evansville. It is four hundred and sixty (460) miles long, being the longest unbroken line of canal in the world. Its course is near the middle line of country, of which Toledo is the lake port; and so in the natural line of its main traffic. 2. The *Miami and Erie Canal* unites with the Wabash and Erie seventy miles above Toledo, and, by a line nearly south, traverses the rich Miami valley and joins the Ohio river at Cincinnati, making a nearly direct water channel between that city and Toledo, 247 miles in extent.

The water-ways of Toledo, by lake and canal, facilitate navigation in several directions, and to a large extent.

	Miles.
By lake, west to Chicago	800
" northwest to Superior City	850
" northeast and east to Ogdensburg and Oswego	500–2,150
By canal, southwest to Evansville	460
" south to Cincinnati	247– 707

The railroads, of which there are six important lines centering in Toledo, radiate more completely, and therefore, have commercial command of a greater extent of country than the water-ways.

The direct destinations of trains, leaving the city, are as follows:

	Miles.		Miles
Cleveland	112	Chi'go by Mich. Sou.	243
Detroit	65	St. Louis	459
Cincinnati	202	Elkart by Air Line	124

The distance from Toledo to Chicago by the Northern Indiana, known as the "Air Line" Railroad, is 232 miles. This is the shortest practicable route across the peninsula of Michigan, and between the cities of Chicago and Toledo.

The population of Toledo, though still remarkably small compared with its commercial facilities and business, increased, from 1850 to 1860, in a larger proportion than any other lake city, except Chicago, as the following figures, derived from the United States census returns of the two periods, will show:

Population.	1850.	1860.	Increase per ct.
Chicago	29,963	109,430	265
Toledo	3,829	13,784	260
Milwaukee	20,061	45,325	124
Detroit	21,019	46,834	122
Cleveland	21,400	43,550	105
Buffalo	42,261	81,541	93
Erie	5,850	11,113	90

The same proportionate increase, continued to 1870, will give Toledo a population of 50,000.

Michigan Southern Railroad—The main division of this road is the Main Line passing through Southern Michigan and Northern Indiana, 243 miles, to Chicago, having a well cultivated and productive country, furnished with abundant water-power for mills, to furnish its local traffic. Our best wheat, and a large portion of our flour, are received from this road. The Air-Line road was constructed with a view of shortening the distance to Chicago, which by it is reduced to 231 miles. It runs through a comparatively new country 127 miles, to its intersection with the main line, at Elkhart. Much of the distance is on an air line, and the gradients of this route are wonderfully easy, so much so, that the equated distance from Chicago to Detroit is less, by this route, via Toledo and the Detroit and Toledo road, than by the Michigan Central.

The Jackson Branch, or Jackson and Toledo Railroad, connects us with Jackson, Mich. by a line of 63 miles, giving us communication with Central Michigan, and access to the rich coal fields of that region.

Toledo and Wabash Railway.—This road, extending from Toledo to the Illinois State Line, was first opened for business, its entire length, in November, 1856, and each succeeding year has demonstrated its importance to the rich country through which it passes, as also to this city, in bringing us into direct connection with the richest grain regions of the West. Notwithstanding the many difficulties with which the Company have had to contend in opening and maintaining the line, its present prospects are very flattering and lead to the conclusion that at no distant day it will occupy a place among the best paying roads in the country.

At the State Line, connection is made with the Great Western Railroad, which gives us direct communication with St. Louis making a continuous line 459 miles in length. Another important connection of this main line is the Logansport, Peoria and Burlington Railroad extending from Logansport, 166 miles from Toledo, to Burlington to the Mississippi, a distance of 431 miles from Toledo. The facilities of this last mentioned road have been altogether inadequate, the past year, for transporting the freight offered along the line; but arrangements are being made to remedy this difficulty, and it is believed that the business of both roads for the coming year will be much greater than in the past.

Dayton and Michigan Railroad.—The line of railroad owned by this Company extends from this city to Dayton, Ohio, and, by arrangement with the Cincinnati, Hamilton and Dayton Railroad, connects, directly, Toledo with Cincinnati by the shortest line of railroad between the latter city and Lake Erie, total distance being 202 miles. This route passes through the richest valleys in the State, the Great Miami Valley of Ohio and a portion of the Valley of Miami of the Lakes. Forests of the finest timber stand all along its northern extremity, and mills are being erected at eligible locations throughout the road, which will turn out for shipment vast quantities of lumber and timber to swell our immense shipments of those articles.

Cleveland and Toledo Railroad.—This road is our principal eastern shipping line during the months when the Lake is closed. The receipts of produce by this road during the year have not been sufficiently large to make it an object to compile them into a table. The receipts of merchandise and shipments of produce have been very large—the total tonnage of receipts at this point by this avenue of trade being, 67,739 tons; and the shipments amounting to 147,878 tons.

Canals.—Abstract of the property received at and cleared from the Canal Collector's Office in this city, during the year ending Nov. 30th, 1861. The aggregate tonnage of imports and exports is equivalent to two thousand six hundred and thirty-seven cargoes of sixty tons each. This shows an increase of tonnage over the preceding year of about nine thousand nine hundred tons, or equal to one hundred and sixty-five cargoes.

Bank of England.

The net profits of the Bank of England for the half year ending February last were £609,818, making the amount of the "Rest" on that day £3,633,827 18s. The dividend proposed by the Directors was at the the rate of 4½ per cent. for the half year. Mr. Latham, the Governor, remarked that this was an unusual dividend, as the Directors were not in the habit of splitting the ½ per cent. This was done, however, seventy or eighty years ago, when the dividend was 2¾ per cent., and from the year 1767 to 1781 it was 2½. The reason for dividing so closely now consists in an alteration in the law, whereby trustees are authorized to invest in Bank stock. If a dividend so small as 4 per cent. were declared, and a large sum carried over, there might be some disturbance of the proper relations between the owner of the interest for life and the owner of the remainder. It was thought best, therefore, to divide more closely than usual, leaving the "Rest" at £3,015,825 8s. The dividend as proposed was unanimously adopted. The diminution in the

profits of the Bank is attributable to the reduction recently made in amount allowed for the management of the National Debt, the establishment having received £25,000 less under this head during the half year than hitherto, and also to the low value in money. Mr. Alderman Salamons, M. P., referred in thankful terms to the late measure respecting the transfer books, the practical effect of which is to keep them open altogether.

The condition of the Bank on the 23d of April, was as follows:

Rest.....	£3,088,559	Gov. secur's	£11,210,755
Pub. deposits.	5,534,976	Other "	17,714,378
Other "	15,015,247	Notes unemployed ...	9,930,850

The amount of notes in circulation was £21,024,360, and the stock of bullion in both departments £17,172,204.

Railroad Earnings--Monthly.

The Chicago and Rock Island Railroad earned

in April, 1862.....	$71,076

Insurance Stock Notes—Levies on Insured Property.

INSURANCE COMPANIES: STOCK NOTES—LIABILITY OF STOCKHOLDERS.

The case of Franklin Fell, et al. *vs.* McHenry, Assignees of the Western Insurance Company, has been determined by the Supreme Court of Pennsylvania. The point involved was as to the liability of the stockholders of the Company upon their stock notes, for losses occurring during the period for which such notes might have been given. By an act of the Pennsylvania Legislature passed the 9th day of April, 1849, the company was authorized to act as a Mutual Insurance company: they never exercised this power; but the act contained the following section, which was considered by the company a great privilege:—"The company, for the better security of its dealers, may receive notes for premiums in advance, of persons intending to receive its policies, and may negotiate such notes, for the purpose of paying claims or otherwise, in the course of its business; and on such portions of said notes as may exceed the amount of premiums paid by the respective signers thereof at the successive periods when the company shall make up its annual statements, and on new notes taken in advance thereafter, a compensation to the signers thereof at the rate to be determined by the directors, but not exceeding five per cent. per annum may be allowed, and paid from time to time."

Until this privilege was secured to them by this legislative alteration of their charter, extending their powers, the corporators did not attempt to act as a corporate body. A meeting, pursuant to notice, was held on the 14th July, 1852, and fifteen persons were, by resolution, associated with them, and a committee of seven was appointed to obtain subcriptions to the stock of the company, who were authorized, as soon as sufficient stock was subscribed, to appoint a time and place for the election of directors, and give due notice thereof by advertisement. The company was accordingly organized; and on the 8th of March, 1853 a resolution was passed by the board of directors in these words:

Resolved—"That for the better security of its dealers, this company will receive under the 2d section of the supplement to the charter, notes for premiums in advance to an amount not exceeding one hundred and fifty thousand dollars, payable twelve months after date, *which shall be liable only for losses during the period for which the notes are given*, and provided the other assets of the company shall not be equal thereto; and then be allowed and paid to the signees thereof as a full compensation, five per cent, under the provisions of the said section." The defendants in this suit had subscribed all the several agreements for each year, and their notes had been delivered up to them, and the guaranty commission of five per cent, paid on each note to them until we come to the note in suit of April, 1857. The agreements and subsciptions were all in one book, which contained in the front, a part of section 2d of the supplement to the charter, and the resolution of the board of directors. The agreement under which the note in suit was given read as follows: "We the undersigned agree to give our notes dated the first day of April, 1857, for the sums set opposite our names, under and subject to the terms, conditions and agreements contained in the supplement to the charter of the Western Insurance Company in the 2d section of the act of April 9th, 1849, and the resolution of the board of directors of said company.

On these facts the court now hold the defendants liable upon their note. The following embodies the decision of the court.

READ, J.—This note was liable for losses occurring during the period for which the note was given, to wit: for twelve months after date, the first of April, 1857; and the losses in that twelve months outstanding and undisputed, were between thirty and forty thousand dollars, and no assets were available for these losses except the guaranty notes.

Upon this state of facts can there be any doubt of the acutual acceptance of the supplement to the charter, independent of the reserved power of the legislature to make the alteration by the company, and that the repealed acts of the defendant put it out of his power to dispute it? The supplement was recognized by the company, who acted under it from the commencement, and accepted the benefits which he reaped from giving his notes under it. He was therefore liable to pay the balance of his note to assist in paying the losses which had occurred during the period for which it was given.

THE EFFECT OF LEVIES UPON INSURED PROPERTY: THE CLAUSE RELATIVE THERETO CONSTRUED AS MEANING RIGHTFUL LEVIES.

A clause in the policy of insurance provided that "the insurance should be void if the property was levied on or taken in custody by the law." The plaintiff W. T. Mills purchased the property upon which the insurance was effected from David W. Mills, against whom an execution was issued, and the property in question levied upon as belonging to him, subsequent to the insurance being placed upon it, and prior to its loss. The question was, whether this levy rendered the insurance void, whether the levy was such a one as was contemplated by theclause referred to, or properly came within its scope and meaning. The following is the opinion of the District Court of Philadelphia, in which tribunal the action was brought.

HARE, J.—If this condition is to be interpreted literally in the strict sense of the terms employed, the conditon is broken, and no recovery can be had in this action, because the property was in fact levied on before the loss, though under a writ issued against another man, from whom the plaintiff had bought, and therefore issued wrongfully, if the sale was valid. We are, however, of the opinion that the literal interpretation is not the correct one, and that the true meaning of the parties must be sought in this instance, as in many others, in the spirit, and not merely in the strict letter of their language. The condition is broad enough to include all levies, whether by right or wrong, under an execution against a stranger, or the party by which the insurance was effected, but the latter would naturally think, only of executions against himself, and might be ignorant that his property could be seized without his being in default, under a writ against another man. The plaintiff might well be asked, and as readily consent, to stipulate against his own acts, or the rightful and legitimate acts of the others; but no man should be presumed to have meant to make himself answerable for wrongs in which he was not an actor or participator, without the clearest evidence that such was his intention; because wrong is a departure from the right rules of action, which no man can foresee, or foreseeing, guard against. It has accordingly being settled, from a comparatively early period, that acovenant in a deed "that the grantee shall from time to time, and all times thereafter, peaceably and quietly have, hold and enjoy the land granted, without any let, suit, trouble, denial, eviction, interruption, claim or demand whatsoever, of, from or by him the said grantor or his heirs, or any other person or persons," will, notwithstanding the force and extent of the langnage employed, which might seem designed to cover every act of any nature that could in any way interfere with the grantee's enjoyment, be limited by construction to these acts and injuries which may be done or inflicted rightfully, by virtue of some paramount title, and will not be allowed to embrace others of a different description, although falling within its literal meaning. If this be a just rule in the case of covenants, it must apply *a fortiori* in that of conditions, which, unlike other stipulations, are always, if there be a fair choice of meanings, taken favorably for the party whose words they are, and least favorably for the party who seeks o enforce them. We, therefore, cannot well be wrong in bringing what the parties have said in this in-

stance down to the level of what they may fairly be presumed to have meant, by interpreting the language of the clause as meaning rightful levies, as distinguished from those made by wrong.

The National Finances.

The result of the past few days has fully confirmed the views and positions we have, since the first publication of our CIRCULAR, urged and maintained—that the rebellion weakened in no appreciable or important degree the financial strength of the people or government; that the political integrity of the country would speedily be restored, and that with this, the public securities would steadily advance toward the highest quotations ever reached; and that as a necessary sequence, those of States, municipal bodies, railroads and other companies, would experience a similar recovery. We have not only acted upon such premises, but we have constantly endeavored to maintain them by arguments drawn from the plainest economic rules, and by statements illustrating in a most conclusive manner the vast resources of the North in comparison with those of the South. Now that the demonstration has been had, every one can point to the cause, in the superior industry, economy, mechanical skill, business aptitudes and training; and in the vast investments of the North in manufactures, public works, and in the machinery of commerce and trade. But sanguine as we have been, the result has exceeded our expectations.

We have been engaged in a civil war, colossal in its proportions. This war instantly put an end to all communication between the two sections, blotting out debts to the amount of hundreds of millions owed to the North; and withdrawing from our foreign trade, staples equalling in value $225,000,000, or more than one-half the total value of exports for a long series of years. So rude a shock, it was supposed, and not unreasonably, by persons unacquainted with the resources of the Northern States, would cause universal bankruptcy—of the nation as well as individuals, from the losses necessarily sustained by the interruption of trade; by the universal repudiation of debts at the South; by the diminution of our exports; and more than all from the enormous sums required to enrol, arm, equip and maintain in the field 600,000 soldiers, and for the construction of a numerous and powerful navy. Yet within the first year after the rebellion broke out, we were enabled to reduce our exportations to such an extent, that we imported over $50,000,000, in gold, in addition to the product of our mines, increasing within the year the specie reserves of the country by at least $125,000,000. Within the year our exports far exceeded our imports without a bale of the crops of 1861. In default of this, we brought other resources into play, so that as far as the loss of the crop is concerned, the people of the United States have suffered less than the leading commercial nations of Europe. We have much less to fear from its total loss. With our crops of breadstuffs and provisions; with general merchandise, and with the precious metals, which, as a gold producing country, we can well spare to a very large amount, we need have no fear of a balance of trade against us. But the crowning test of the vast financial strength of the country has been the great degree of personal comfort that has prevailed. Food of all kinds was never so abundant, never cheaper, or more accessible by all classes. There has unquestionably been much individual distress suffered by parties engaged in the Southern trade, but as a rule, the great mass have never been better employed, fed or clothed. Money during the whole period of the rebellion, has been most abundant, notwithstanding the enormous calls of the Federal Government. As soon as this came to a full consciousness of the magnitude of the crisis, and of the steps necessary to be taken to meet it, its credit steadily improved. The advance in the market value of its securities since midsummer of 1861, to the present time, has been fully 20 per cent. Money is still proffered to it in abundance, at five per cent., and it will unquestionably soon be able to borrow, at *par*, on bonds bearing not over 4½ or 5 per cent., if not at lower rates. The financial as well as the political difficulties by which it has been surrounded have been so completely solved, and the great current of investment and speculation tends to its securities.

Such are the phenomena, or results, before us. The law, of course, must correspond to it. Certainly no nation has equal resources in agriculture, which forms the base of all other interests, and constitutes by far the greater portion of the wealth of all nations. The capital stored up in a virgin soil in the United States is far greater than the accumulated wealth of all other nations. This capital becomes instantly available to the pioneer, single handed and alone. A large portion of the country from which the city of Chicago draws its breadstuffs has been settled hardly ten years. The Illinois Central Railroad when built, traversed an unsettled country for nearly its whole length—a country which may now be regarded as the storehouse of the West. In the United States, nature enters into copartnership with industry and furnishes, most lavishly, the capital. Our system of public works fortunately was so complete before the outbreak, that every farmer in the interior had a market for his products at his own door. These works are on a scale so grand, that vast quantities of produce from districts more than two thousand miles inland, are laid with profit upon our docks, and sent thence thousands of miles, to consumers in the old world. Upon not one of our 23,000 miles of railroad, nor 5,000 miles of canal in the Northern States, has the free movement of produce been for a moment interrupted or its volume reduced from fear of such interruption. Industry has been everywhere equally free to pursue its objects. The consequence has been, that the people of the loyal States have hardly felt the burden imposed upon them. War has not shown its stern visage in their midst. Their fields have not been desolated, nor their industries disturbed. The war has, in effect, been waged upon a foreign soil, with as little loss or disturbance to the Northern States, as to the commercial nations of the whole world.

Such have been the methods, or causes, of the strength and prosperity of the North. We do not deny that the experience gained has been a costly one; but it has still been cheaply purchased. Our people will no longer, as formerly, stand in constant terror of threats of political violence or disturbance, or commercial disaster, in case they would not yield implicit obedience to that arrogant and imperious caste, which for so long a time wielded the government. Cotton is no longer a despot, to inspire terror either at the North or South. We shall hereafter measure the wealth and resources of the different sections by the degree of intelligence, integrity and industry they possess. No party of malcontents will ever again seek upon a frivolous pretext, to subvert the government, destroy our nationality, and substitute therefor petty states or tribes, which would soon exhaust their feeble means in attempts at mutual destruction. The terrible disaster which the rebels have brought upon their own heads, the end whereof is not yet seen, will forever be a beacon and warning against any similar attempt. The war has consolidated us into a nation—a nation whose material greatness must reflect that of the resources of the country it inhabits—a country in which is to be unfolded, on a grand scale, whatever is best in European nationalities or civilizations.—*Hallett's Financial Circular.*

Railroads in Missouri.

JOINT RESOLUTION IN RELATION TO CERTAIN RAILROADS IN THE STATE OF MISSOURI.

Whereas by the fourth section of the act of Congress entitled "An act granting the right of way to the State of Missouri, and a portion of the public lands to aid in the construction of certain railroads in said State," approved June the tenth, eighteen hundred and fifty-two, it is provided as follows: "That the said lands, hereby granted to the said State, shall be subject to the disposal of the Legislature thereof, for the purposes aforesaid and no other;" and the said railroads shall be and remain public highways for the use of the Government of the United States, free from toll or other charge upon the transportation of any property or troops of the United States; and whereas the said grant of lands has, by virtue of said act, and of an act of the Legislature of the State of Missouri, been applied in the construction of the Hannibal and Saint Joseph railroad, constructed and owned by the Hannibal and Saint Joseph Railroad Company, and the Pacific railroad by the Pacific Railroad Company, which last mentioned railroad is finished and running from St. Louis to Rolla; and whereas the ability of said railroad companies to transport the property and troops of the United States over their respective railroads has been greatly impaired by the destruction of bridges, depots, and other property of said companies, and the partial destruction of said roads, and in view of the pressing public necessities, the United States, not waiving the right to have their property and troops transported free from toll or other charge by said railroads, as contemplated by the reservation aforesaid, have resolved as follows; Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War is hereby authorized to make such an adjustment with the Hannibal and Saint Joseph Railroad Company and the Pacific Railroad Company, for the transportation, past and prospective, of the property and troops of the United States, over said railroad during the existence of this rebellion, as in view of the public exigency may be just and reasonable, and liquidate the same: *Provided, however*, That the sums paid to said companies shall be as near as may be the cost of transporting such property and troops, and not exceeding the prices fixed by the War Department on the twelfth day of July, eighteen hundred and sixty-one, for transportation by railroads, which adjustment and liquidation shall preclude any further claim on behalf of such companies against the government for compensation or damages previously accrued, or for the military occupation of the said roads by the United States Government up to the time of the passage of this act: *And provided further*, That the Secretary of War may, in his discretion, withhold from time to time such portion of the moneys which may be due to either of said railroad companies, to indemnify the Government against any failure of such company to promptly transport such troops and supplies; but nothing herein shall be so construed as to prevent the Secretary of War from taking possession of said railroads and their appurtenances, and applying the same to the exclusive use of the Government whenever, in his judgment, the public interest may require it, without, in such case, compensation to said companies.

Approved, March 6, 1862.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var.," that the bonds fall due at different periods

American Railroad Journal.

Saturday, May 10, 1862.

Commutation on Railroads.

From being a special favor conferred on a few individuals, on account of the pecuniary or other interest which they might have had in certain railroads, commutation has become a recognized and considerable source of revenue on many of our lines. Large, however, as it now is, we believe it capable of almost indefinite extension, to the great benefit of both city and country. The rule on which managers usually act is to charge from daily travelers just enough to cover working expenses, leaving the profits to accrue from that increased travel of transient passengers which is certain to be developed. Most commuters are men with families, who will travel more or less frequently; each has also his circle of friends at a distance, who visit him occasionally. With passenger travel freight follows, and the single house in time grows into a village, with aspirations after a city charter.

In this manner, not only does the city of New York increase largely its dimensions every year, but it throws out its feelers for a distance of ten, twenty and even fifty miles into the interior. Commuters traverse the New Haven road daily back and forth for its entire length. On the Hudson River road they come in from Poughkeepsie; on the Harlem from Croton Falls; on the Erie from beyond Sufferns; on the New Jersey from New Brunswick; on the Morris and Essex from Morristown; and on the Long Island from equal distances. On the different lines of railroad converging at this city, we believe, nearly ten thousand persons make "their exits and their entrances" daily. They have carried the arts, refinement, intelligence and wealth of the metropolis far into the rural districts. They bring hither the robust health and buoyant spirits which are as much the product of the fields as grain and vegetables. They afford to the rising generation an excellent opportunity to avoid in a great measure those temptations that would beset them in large cities. They rub off by constant attrition that ancient repugnance which existed between the urban and rural populations. They are thus great civilizers, peace makers, moral and hygienic reformers, all combined.

The men who purchase commutation tickets are the moderately prosperous in trade, or those who fill public and private situations which do not demand their full time. As a rule, our very rich class prefer to reside in the city the greater part of the year; the very poor also do the same, for the all-sufficient reason that they cannot make their escape out of it. Since the reverse of 1857 it has been noticed that not a few, previously in affluent circumstances, have sought to improve their *health* by living permanently in the country villages, in which they confess the further incidental advantage of decreased outlays for family expenses.

On the Harlem and Hudson River roads the efflux of commuters has contributed materially to enhance the price of real estate. The same change has taken place along the line of the New Jersey road, and more recently along that of the Northern of New Jersey. The Western slope of the Palisades is, in fact, fast becoming one continuous village as far up as Piermont. The villages of Bloomfield, Orange, Belleville and several others in the neighborhood of Newark, have been built up and beautified within a few years; and still there is a demand for eligible sites, and pleasant residences. On the line of the Erie road considerable progress is now being made, though the movement was dilatory in commencing. After crossing the "Salt Meadows" the road passes for twenty miles through one of the most picturesque and healthy regions that could be desired. The water is excellent, and the scenery in many places enchanting; at others bold to sublimity. Good land can still be had for $150 per acre; and occasionally eligible sites for even less.

With these inducements we see no reason why the constant overplus of city population should not search an outlet in that direction, as it has already done toward other points. But there is still more to be done by way of commutation. Thousands of mechanics could just as well as not travel ten or fifteen miles night and morning by the cars. The cost of a ticket would not equal the difference in rent, added to which milk, vegetables and other farm products could be had at less cost and in more wholesome condition. Indeed, each might in time secure his acre or two of the soil, on which he could fall back in seasons when employment was scarce, without any sacrifice of time, money or independence. "Carlstadt" is the name of a village of this description in Northern New Jersey, built by a large number of thrifty Germans. There is no reason why multitudes of such communities would not spring up in every direction along our railroads, if the true method of encouraging settlements were only resorted to by the managers.

Detroit, Monroe and Toledo Railroad.

The annual meeting of the stockholders of the Detroit, Monroe and Toledo Railroad, was held at Detroit on the 24th ult. The following Directors were chosen for the ensuing year: E. M. Gilbert, Henry Keep, Albert Havemeyre, John S. Barry, M. L. Sykes, Jr., Philo Morehouse, Stillman Witt, Nelson Beardsley, William Williams, Ransom Gardner, and Zachariah Chandler.

The Directors at a subsequent meeting, elected the following officers: President—M. L. Sykes, Jr.

Gen. Superintendent—John D. Campbell. Secretary and Treasurer—Wm. F. Staunton.

Non-Incrustation of Steam Boilers.

A SOURCE OF ECONOMY.

We cannot too highly recommend any positive and non-injurious process to prevent incrustation in boilers. Any one knows how difficult it is to make steam in a scaly boiler, and the reason is obvious—because the scale is a non-conductor of heat, hence it requires a much larger amount of fuel to penetrate it and the iron, to reach the water—and this extra quantity is what destroys the vitality of the iron, (as the water cannot reach it to absorb the heat) and it is only a matter of *time when* it requires new flues, patching, or an explosion takes place. The recent explosion in the Alms House was caused by the accumulalation of scale in the boiler. The loss of fuel of course is great—from 10 to 50 per cent.

Mr. H. N. WINANS, of our city, has what we consider a positively reliable article for this purpose, and we cannot see why it is not universally adopted—and on all the engines on a road, as well as on a few. We know of its constant use for over 4 years in some engines, and the report of it is of the highest character; in fact the Dayton and Michigan Co., say "it is a fixed institution" with them—the late Mr. Congdon of the Bel. Del. R. R. (than whom a better man never had charge of a road) says, after 3 years' use, that it is perfectly harmless to the boilers, and makes a great difference in the fuel bill. A. S. Sweet, Jr., gives it a high character, as does Bement and Dougherty, Morris, Tasker & Co., and others of Philadelphia, also Mr. J. E. Wootten and Jas. Millholland of the Reading R. R. For further reference address Mr. WINANS, whose advertisement will be found in our columns.

To Consumers of Coal.

Attention is asked to the advertisement of Mr. GEO. W. PECK. The convenience of dealing through brokers has been tested in nearly every department of trade, and Mr. PECK is prepared to show that the same benefits may be obtained in the article of *coal*. In few cases can the purchaser be supposed to possess so thorough a knowledge of the different varities of this mineral as the experienced dealer, nor can the adaptation of each kind to particular purposes be readily ascertained. Mr. PECK having an intimate acquaintence with every description of coal, whether domestic or foreign, is prepared to give the benefit of his professional skill to the purchaser, as well as to supply the article in any quantity, on the shortest notice, and at the lowest market prices. As coal is daily coming into more general use on our railroads and steamboats, to say nothing of furnaces, repair shops, depots, &c., the managers of these public works would do well to give him a call. His office is at 110 Wall Street.

Camden and Amboy Railroad.

The annual meeting of the stockholders of the Camden and Amboy Railroad Company for 1862, took place at Bordentown, on the 20th ult., at 12 o'clock m. The following directors were elected for the ensuing year; Edwin A. Stevens, William Cook, John Swift Livingston, Benjamin Fish, John L. McKnight, Joseph P. Bradley, and Ashbel Welch.

The American War and English Railways.

While our railroads in the North are generally doing a profitable business, it is noticeable that the war in this country has caused a large falling-off of receipts on the leading English lines. The American trade being in a great measure paralyzed, freighting and even passenger traffic is seriously affected. The London journals publish the receipts for the week ending April 12th, on 10,145 miles of railroad. These amounted to £494,695, against £524,427 for the corresponding week last year, the aggregate length of lines being 9,911 miles. Fourteen of the principal show an increase in length of 160 miles, and a decrease in receipts of £27,571. That on the Caledonia Railway was £445; on the Eastern Counties, £1,857; on the Great Northern, £2,079; on the Great Western, £3,442; on the Lancashire and Yorkshire, £5,289; on the London and Northwestern, £3,068; on the London, Brighton and South Coast, £2,077; on the London and Southwestern, £900; on the Manchester, Sheffield and Lincolnshire, £2,029; on the Midland, £861; on the Northeastern, £2,808, and on the Southeastern, £2,759. In only a very few cases do we observe an advance made, and these lines are mostly small or newly completed works.

The shock does not appear to have affected the continental railroads so severely; yet we observe that some of those in France have sustained considerable loss from this cause. Among these are the Paris and Orleans, whose receipts for the same week fell off 100,000 francs, and the West and Northwestern, which fell off 44,000 francs.

The remark is trite that nations, like individuals, are bound up in each other; but if it needed confirmation, we would have it in the facts spread before us. It is not our business to inquire whether or not these drawbacks to prosperity abroad are due in part to the countenance lent to anarchy in this country; though the fact is here broadly asserted and generally believed.

Canadian Finances.

From the report of Mr. Galt, Financial Minister of Canada, we learn that the total receipts into the provincial treasury, for 1861, were as follows:

Ordinary revenue, including sums received on account of Municipal Loan Fund, and interest received from Railway Companies	$7,841,311 25
Investments realized and advances repaid	1,116,219 29
Receipts on acc't of special funds	934,048 36
Debentures issued	2,764,002 58
	$12,655,581 48

The expenditures for the same period were:

Ordinary expenditure		$9,318,180 02
Seignorial indemnity, which, till the close of the commission, is paid from the special fund		224,133 46
Permanent public works		906,213 88
Advances to be repaid		218,898 77
Repayment of sums, due by the Province, on open account		519,945 00
Payment of special funds		751,590 94
Redemption of public debt	$2,738,872 21	
Do. Lake St. Peter b'ds	65,000 00	
		2,808,872 21
		$14,742,834 28

The redemption of the Municipal Loan Fund Bonds has been proceeded with successfully. The amount outstanding at the end of last year was $399,030 67, against $2,936,536 01 at the close of 1861. A large portion of the balance has since then been redeemed. There has been no increase in the funded debt. There would appear to be a deficiency of revenue as compared with expenditure of $2,087,252 80; but of this $906,213 88 was disbursed on permanent public works, leaving the actual deficit, $1,181,038 92. The cause of this is attributed to the interruption of trade through the civil war in this country. The continuance of it, observes Mr. Galt, must seriously affect the revenue, and will render necessary the adoption of other means to meet the deficiency.

Of the revenue we find that $4,774,562 was derived from customs' duties, of which $2,393,486 was paid at Montreal and $494,103 at Quebec. Licenses for taverns, stills, breweries, etc., yielded $354,595; the post office, $688,321, or $20,000 beyond expenses; and public works, $324,619, or $45,612 beyond expenses. Of these the Welland canal alone yielded a profit, its gross receipts having been $241,775, while its expenses were $116,630, a little less than fifty per cent. The St. Lawrence canal produced $29,159 and cost $75,021. The Burlington Bay and the Carillon and Greenville produced nothing, and cost—the former $100, and the latter $7,295. The Chambly yielded $10,211 and cost $14,110. The Rideau canal yielded $543 and cost $21,318. The slides yielded $21,372 net.

The following statement shows the debt of the province at the end of 1860 and 1861:

	1860.	1861.
Imperial guarantied loan	$7,300,000 00	$7,300,000 00
5 per cent. bonds and stocks	27,264,011 77	30,020,317 38
Old provincial debentures payable in London	11,531,228 45	31,430,001 67
Do. do. Canada	1,783,120 28	1,691,655 19
R. R. guarantees	14,376,133 34	14,854,233 34
Municipal Loan F'd Upper Canada & Lower Canada	2,936,536 01	899,030 67
Other guarantied accounts	451,439 97	431,239 67
Total	$65,592,469 81	$65,626,478 82
Less-Imperial sinking fund	7,300,000 00	7,300,000 00
Net debt	$58,292,469 81	$58,326,478 82
Net interest payable thereon	$3,122,354 00	$3,118,488 00

The Report of the Commissioner of the Land Office.

From the Report of the Commissioner of the Land Department we learn that since June 30, 1860, there have been surveyed 8,892,125 acres of land to which may be added the number of acres which have been surveyed prior to that date, and which remain still offered for pre emption, making an aggregate of 55,555,593 acres. These lands are liable to proclamation and subject to pre-emption. If we add to this the number of surveyed lands heretofore liable to private sale and pre-emption, we find it leaves in the possession of the United States, on the 30th of September, 1861, a grand total of 134,218,330 acres surveyed, unsold offered and unoffered.

Mr. Edmunds says, in speaking of the bounty land system, that the operations of the land system, and the disposal of the public lands, have

been checked and suppressed by the political differences of the country, growing out of the hostile attitude assumed towards the United States by the authorities controlling the States in revolt against the Federal Government, and he adds the gratifying fact that, notwithstanding these causes, and the necessary withdrawal for military service of a large number of our citizens from agricultural employment, the general disturbance of trade, and the exciting causes affecting the social system, the energy of our people and the strength of our institutions manifest themselves in the fact that, unaided by public sales of fresh lands, actual settlements have increased to such an extent that he estimates that during the past year forty thousand new eighty-acre farms have been added to the wealth of the Republic.

The details of the surveys in the different Territories of the West are elaborated by Mr. Edmunds, but they are hardly of special interest to the country. They exhibit, however, a degree of energy in consolidating, improving, arranging and rendering useful these vast, uninhabited and almost unknown regions, which reflect the greatest credit upon the people and the authorities. Mr. Edmunds suggests that the public surveys in Utah be discontinued, until a policy may be devised by Congress which will induce others than Mormons to emigrate to that Territory. The influence of the Mormon church is paramount in Utah. It is virtually an isolated Territory of the Union, and it is thought advisable not to continue unnecessary and unremunerative labor. The surveying service continues in Minnesota, Illinois, Iowa and Kansas, but has been interrupted in Missouri, Indiana and Florida, by the political disturbances in those States, the archives of the surveyors of Louisiana and Florida having been surrendered to the Confederate authorities. Mr. Edmunds, in his report, submits reduced estimates for the surveying department, in consequence of the drain upon the treasury for war purposes, and diminished receipts for the sale of lands and the cessation of emigration to these wide fields of public domain. He thinks, in the present condition of public affairs, it would be prejudicial to great public or private interests to enlarge the surveying appropriations; and he very properly thinks that sound policy recommends that all surveys shall advance according to the requirements of actual settlements.

The pre-emption principle, according to the Commissioner, which was recognized in the early legislation of our country, has ripened into a permanent system. In the expansion of the system, however, and in its application to unsurveyed lands in new States and Territories, some irregularities have arisen demanding legislative intervention. In this connection he alludes to a new point of interest at the present time. His attention has been drawn to the condition of persons claiming pre-emptions, and wishing to enlist in the service of the Republic, who are desirous of ascertaining whether such pre-emptions will be protected during the absence of the claimants. Having no doubt of the justice of the principle which will protect the interests of claimants, under such circumstances, it has received the sanction of the Commissioner, with this qualification; that the pre-emptor is an actual resident upon and cultivator of the tract claimed, has filed his declaratory statement, and has fully observed the requirements of the pre-emption law, up to the period of his enlistment. In that case, he holds the time of actual military service will not be so considered as to result in forfeiture of his lands—provided that notice of his entrance into the army, and his discharge from service, is promptly filed with the register and receiver, and that such steps are taken as will show a *bona fide* intention to return to the tract, by leaving his family on the land, where he has one, and where no family, that the premises shall be placed in proper charge for the pre-emptor, so that residence and cultivation shall be continued when the military service is at an end.

During the year ending September 30, 1861, in virtue of the scrip laws of 1852, scrip has been issued as bounty land warrants for 80,628 acres, making with the quantity heretofore issued, a total sum of 938,054 acres. Before the Land Commissioners, claims are now pending equal to 153,358 acres. In the Virginia district there are 100,000 acres liable to commutation into scrip. The rebellion of Virginia will not prejudice the claims of loyal citizens, lawfully entitled to scrip in satisfaction of their warrants. The aggregate bounty land liabilities already ratified by the United States, from the commencement of operations to the 30th December, 1861, are as follows: For revolutionary services, in tracts and scrip, 8,200,612 acres; for services in 1812, 4,850,120; Canadian volunteers, 72,750. There are now actually located—under Mexican bounty land act of 1847, and the other acts of 1850, 1852, 1855—51,138,970 acres, making a total of 64,262,452 acres.

During the fiscal year ending June 30, 1861, there have been certified for railroad purposes, under the railroad grant acts of 1856 and 1857, as follows:

To Minnesota, acres.	308,871.90
To Michigan "	636,061.42
To Louisiana "	76,560.45
Making in the aggregate, acres	1,021,493.77

No approvals were made during the quarter ending 30th September, 1861.

The following is an exhibit of the States and the quantities of land under the several grants actually approved to each up to this date:

	Acres.
Iowa, same as last annual report	2,431,541.00
Wisconsin, do. do.	211,063.00
Minnesota (308,871.90 acres of this approved since last report)	890,775.90
Michigan (462,650 acres of this approved since last report)	1,593,727.42
Florida, same as last report	1,759,160.00
Alabama, do. do.	1,868,275.00
Mississippi, do. do.	171,550.00
Louisiana (76,560.45 acres of this approved since last report)	1,072,405.45
Making a total, which has been approved and certified, of.....	9,998,497 77

The Commissioner is very elaborate in his discussion of the question of minerals. No country on the globe can compare with this in the possession of mineral treasures everywhere developed as the administration of the land system advances over the broad surface of the public domain. Besides the precious metals, with quicksilver found in such abundance in California, which alone has yielded since the first gold discoveries over $600,000,000, we have regions rich in those metals in New Mexico, Nevada, Washington Territory and Colorado. Copper, tin, lead, and coal, are profusely distributed over the great valley of the Mississippi, and westward to the Pacific.

In regard to the precious metals in California, New Mexico, Nevada, Washington Territory, and Colorado, we have not such data as will enable this office to propose a properly guarded system by which the government understandingly can dispose of auriferous, or of quicksilver lands, in a manner that would be just to public and private interests. It is, therefore, not now proposed to withdraw them by legislation from the state of isolation from sale in which the law has placed them, or from being freely worked, as at present; yet in this trying conjuncture of public affairs, when multiplied demands upon the treasury weigh upon it with unprecedented pressure, it could not be deemed unreasonable, after the hundreds of millions of dollars allowed to be taken free of cost, if the government should hereafter subject the product of such mines to a moderate seigniorage, which it is believed would bear upon capital without prejudice to individual miner.

In reference to lands embracing copper, tin, lead, iron, and coal, it is suggested that where either mineral is the predominant element in the smallest legal subdivision, such tract shall be subjected to public sale, according to the principles laid down in the act of 1846 and 1847, with the qualification that the uniform minimum shall be $2.50 per acre at the public sale; that thereafter they shall be liable to private entry at same minimum, say for two years; after which they shall be liable to sale at the ordinary minimum, but not subject to the declining process of the graduation law. In the geological reconnoissance of the late Dr. Evans in Oregon and Washington, immense discoveries of coal fields in that region were made. This great industrial agent is also distributed by the liberal hand of nature throughout the gold region.

The recent discoveries of coal fields not far from San Francisco, and of that scarce and valuable metal—*tin*—but few mines of the latter having been discovered, although known in the early history of man, yet which is now found to exist in the southwestern part of California, within thirty miles of the sea—furnishing powerful incentives to capital, promising rich rewards to the enterprizing. Instructions, by further legal enactment, would enable the Department to deal with these large and delicate interests more satisfactorily than can be done under existing laws.

Customs Duties and Imports of Canada.

The total amount of duty collected in Canada in 1861, was $4,768,192. The total value of importations $43,054,836. The total value of free goods imported the same year, was in coin and bullion $3,304,675—other free goods—$14,655,413. Omitting coin and bullion from the deduction the total value of dutiable goods imported in 1861, was $28,399,423.

The duties and values of dutiable goods for the three years have run in this way:

	DUTIES.	VALUES.
1859....	$4,437,846	$33,555,161
1860....	4,758,465	34,447,985
1861....	4,768,192	28,399,488

Showing that the revenue from customs has been very nearly the same for the two past years, while there has been a considerable increase in the value of dutiable goods imported. The imports of free goods have run in this way for the three

years commencing with 1859—coin and bullion, $19,248; $35,504; $3,304,675;—other free goods, $10,244,833; $10,516,981; $14,655,413—showing progressive increase.

It may be generally stated that a main feature of the trade and navigation returns for 1861 shows a great increase of trade by the St. Lawrence, as compared with other channels, which is a satisfactory result. The Custom's revenue shows a slight improvement; but a considerable increase from some source will be necessary to meet the cost of the new militia organization, and probably to supply deficiencies.—*Montreal Gazette.*

Savings Banks in the United Kingdom, 1860.

Finances of Wisconsin.

The following is an abstract of the late message of the Governor:

The balance in the State Treasury to the credit of the general fund on December 31, 1861, was $16,568 53. He advises the prohibition of the circulation, sale or transfer of county town, city or school orders. He thinks the 1½ per cent. tax upon banking capital sufficient. The percentage on railroads is not sufficient.

The State University, as usual, appeals for help, being unable to meet current expenses. He recommends appropriating from the capital sufficient to pay the debts of the institution.

He encourages the idea of exempting, for a number of years, capital that may engage in manufacture here. He recommends that Wisconsin be represented in various ways by individuals, specimens of soil, ores, &c., at the World's Fair in London, and thinks it would help immigration to this State.

He recommends Milwaukee as the best location on the lakes for a United States Armory, Arsenal, and Naval Depot. He recommends an appropriation of $1,000 per annum to each College in the State owning an endowment of $50,000. He condemns the practice of selling public lands on credit for the purchase, and urges its discontinuance, unless in the case of actual farming lands, and then only in small quantities. Swamp lands he said should be reduced in price.

On the subject of taxation he gives the amount levied for State and county taxes in 47 of the 56 organized counties of the State, in 1857, '58 '59, and '60, and from this table shows the average of the State tax, for the four years named, to be $261,460 11, and of the county tax to be $572,460 05—while the average valuation for the four years, of all property as equalized by the State Board, is $158,679,879 66. A comparison of these averages shows that the county taxes in the 47 counties mentioned above, exceed the State taxes by the ratio of 2,189, and he estimates that the same ratio exists throughout all the counties. So the ratio of excess of town over State taxes is given.

An estimate of all the taxes annually levied upon the property of the State, which, according to the last assessment, as equalized by the State Board, amounts to $180,984,454 38, foots up to the rather startling amount of $3,116,510 08. And this, he says, gives no idea of the condition of affairs in some of the cities, and some of the newer counties. In the latter, particularly, the most reckless system of taxation, in some cases, has been carried on—particularly against non-residents, compelling them to forfeit their lands, which were sold on account of the trust funds of the State. This Policy he condemns. In some cases he shows the taxes due on forfeited lands to equal 80 per cent. of their appraised value; also where the taxes of a single year equal about 7 per cent. of the valuation of the land.

This course he pronounces to be unjust, and ruinous to the counties themselves, as the basis of taxation is reduced by it and immigration is discouraged. The scathing censure which he passes upon the practice, and upon the vagabond officials who thrive upon it in newly-settled counties, should engage the attention of the Legislature to the subject at the very outset of the session. He does not believe, he says, that by calling attention to these evils he is injuring the State, but, on the contrary, believes it will be a benefit, as the corrective must surely follow the exposure.

There need be no fears, he thinks, but that the people of the State will respond cheerfully in the matter of the Patriotic Tax—or the Real Estate and Income Tax—together amounting to possibly $700,000—called for from the State by the General Government. The present ratio of taxation upon all the real and personal property of the State which is included for assessment, he says, is *one and three fourths* per cent.

There are other points of importance taken up by him. Among these, he propose a reduction of the rate of interest, and thinks that the State has no right to assume the misfortunes of private individuals who have participated in railroad affairs, referring to farm mortgagors. The present liabilities of the State, he says, are $343,008 63, to which a further allowance of $30,000 should be made for salaries due to members of the Governor's military staff, assistant surgeons sent by the State with her regiments, wages due to one and another for acting in different military capacities, &c. The total war expenses, so far, have been $1,656,659 89. The number of troops now in the field, with those that will soon be ready to take the field, amount to at least 24,800.

He makes the statement that the calls of the Government will not add 25 per cent. to the accustomed burdens of taxation.

Interest and Dividends.

The coupons due May 1 on the New Haven, New London and Stonington Extension Bonds will be paid at the office of M. Morgan & Son, No. 37 William-st.

The interest due March 1, 1862, on Jersey County (Ill.) bonds, issued to the Jacksonville, Alton and St. Louis Railroad Company, numbered from 1 to 100 inclusive, will be paid at the American Exchange Bank.

Commerce of Detroit.

The following is a comparative statement of the imports and exports at the port of Detroit for the month of April, 1861 and 1862:

Imports.	Value.	Duties.
1862	$10,689 00	$3,303 34
1861	809 00	223 00
Increase	$9,880 00	$3,080 34
Exports.		Value.
1862		$110,162 00
1861		21,911 00
Increase		$88.251 00

Grain Trade of Toledo.

The receipts for the month of April, 1861 and 1862, compare as follows:

	Bbls. Flour.	Bush. Wheat.	Bush. Corn.
April, 1862	102,273	182,664	132,814
April, 1861	96,822	110,398	376,564
Jan. 1 to May 1,'62	231,377	480,094	737,139
Jan. 1 to May 1,'61	214,360	333,354	856,702

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending May 2, 1862, was as follows:

Passenger	$16,896 79
Freight and live stock	28,863 12
Mails and sundries	1,460 34
Total	$47,220 25
Corresponding week of last year	45,188 09
Increase	$2,032 16

The receipts of the Grand Trunk Railway of Canada for the week ending April 26th, 1862, were:

15,190 passengers	$22,637 19
Mails and sundries	2,837 68
11,313 freight and live stock	40,251 88
Total	$65,726 25
Corresponding week, 1861	74,070 26
Decrease	$8,344 01

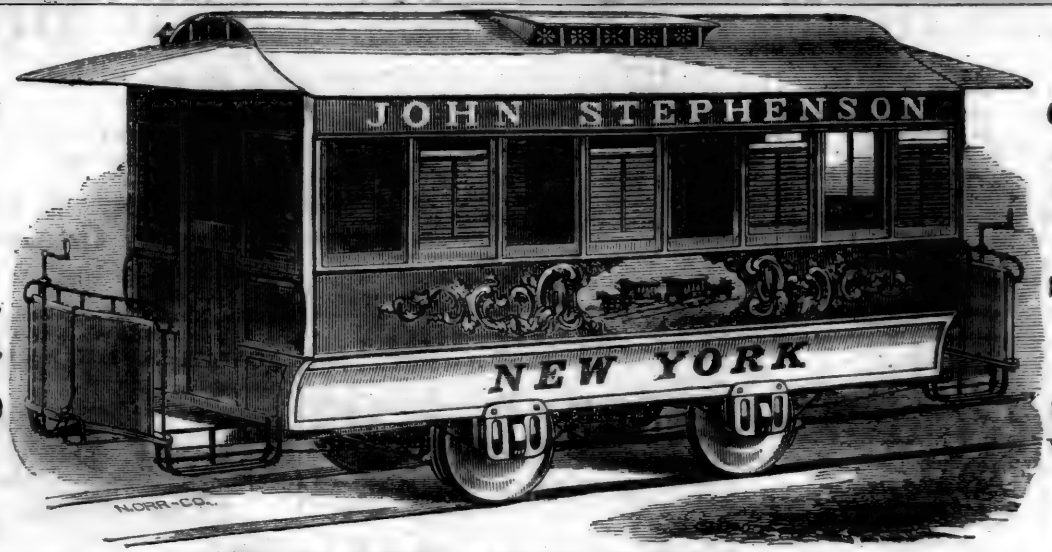
The Bethlehem Railroad.

This projected road is about 12 miles in length, commencing at the terminus of North Pennsylvania railroad and its intersection with the Lehigh Valley railroad at South Bethlehem, Pennsylvania, and terminating at Bath. Charles Broadhead is President, Conrad Shimer, Treasurer, and James Vliet, Secretary.

Baltimore and Ohio Railroad.

BALTIMORE, Monday, May 5, 1862.

The recent damage to the Harper's Ferry Bridge, caused by the freshet in the Potomac River, has been thoroughly and permanently repaired. Freight and passenger trains are now running East and West on regular time. Two hundred and fifty car-loads of produce crossed the bridge yesterday and arrived here this morning.



Babbit Metal! Babbit Metal!

BEST and CHEAPEST in the WORLD!!!—"That's modest!"—says Mr. McGrowler. Well, it is true also, and if the Railroad Committees on supplies will call on me, they will find it so.

BLOCK TIN, ANTIMONY and **LEAD** for the use of Railroads also sold at the lowest rates by

LUCIUS HART,
Nos. 4 and 6 Burling Slip,
NEW YORK.

CARS FOR TWO HORSES COMBINING ALL Valuable Inventions, **ELEGANT STYLE, Light & Durable, Full Size** AND **REDUCED WEIGHT**

CARS FOR **ONE HORSE,** WITH or WITHOUT **Platforms,** OR TO Swing on Trucks.

EVERY **STYLE AND VARIETY** OF CONSTRUCTION.

47 EAST 27TH STREET.

This Establishment commenced building STREET CARS in 1832, and is famed for superior ELEGANCE of workmanship and SUBSTANTIAL practical results.

Its location, in the PORT of NEW YORK, is most favorable for shipments, and its CARS, CONSTRUCTED in SECTIONS, may be ENTIRELY COMPLETED before being packed for transportation.

IMPORTANT TO
COAL DEALERS
AND
CONSUMERS OF COAL.

THE COAL TRADE CONCENTRATED.

THE subscriber, being in constant communication with all the principal Miners and Importers of Coal in this city, is prepared at all times to exhibit at his office, a complete list of all the most approved **Foreign** and **Domestic**

ANTHRACITE,
BITUMINOUS,
SEMI-BITUMINOUS,
AND GAS COALS,

Offered for sale in this market, adapted for **Family Use, Hotels, Factories, Furnaces, Steamboats, Railroads, Blacksmiths, Gas Companies, etc.**

Orders promptly filled at the lowest market prices, in quantities to suit purchasers, and contracts for large quantities negotiated.

Parties in the country and elsewhere, will find this a very convenient and reliable medium for obtaining their supplies of Coal, and are respectfully invited to call personally, or communicate by mail.

Vessels of any size obtained for freighting, when required.

IRON AND STEEL
IN ALL THEIR VARIETIES.
BOILER PLATE, BOILER RIVETS, CUT NAILS and SPIKES, CAR AXLES, RAILROAD IRON, PIG IRON, etc.
Having the selling agency of a number of the Rolling Mills, Furnaces and Forges in this State, **orders for any description of IRON** can be executed.

RAILROAD IRON
AND COMMON BARS.
THE undersigned, sole Agents to Messrs. GUEST & Co., the proprietors of the Dowlais Iron Works, near Cardiff, South Wales, are duly authorized to contract for the sale of their G. L. Railroad Iron, and Common Bars, on most advantageous terms.
R. & J. MAKIN, 70 Broad st.

CAR DUCK.
HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 4 to 140 inches, PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.
For sale by
WILLIAMS & PAGE,
67 Water st., Boston.

NEW YORK
Railroad Chair Works,
J. S. BRESSE, *Pres't.* J. S. DAVENPORT, *Secr'y and Treas.*
Office, No. 89 Maiden Lane, cor. Gold St., NEW YORK.
JOSIAH S. LEVERETT & CO.,
SOLE AGENTS.

THIS Company also manufacture **RAILROAD, SHIP AND BOAT SPIKES** of a superior quality, which they are prepared to supply at the **shortest notice.**

PHŒNIX IRON COMPANY'S

SUPERIOR WROUGHT IRON
RAILWAY CHAIRS,
With continuous lips, made to fit exactly the flanges of the rails.
SAML. J. REEVES, V. Pres't,
410 Walnut st., Philadelphia.

LOCOMOTIVES FOR SALE.
THE JERSEY CITY LOCOMOTIVE WORKS have on hand and offer for sale at low prices and on reasonable terms, **TWO FIRST CLASS NEW LOCOMOTIVES,** as follows:
One Wood-Burner, Cylinders 15 by 22 inches, 5 feet Driving Wheels, Fire-Box 57 by 43 inches and 57 inches deep; 131 Flues, copper, 11 feet long; Gauge, 4 feet 8½ inches; weight, 24 tons, without tank. Price, $8,500 on six months approved notes. Ready for delivery.
One Coal-Burner, Cylinders 12 by 22; 5 feet Driving Wheels; Fire-Box 60 by 42½, and 50 inches deep; with Combustion Chamber 30 inches long; Flues of iron, 6 feet 6 inches in length. Weight, 20 tons. Gauge can be made to suit the purchaser. Can be ready for use within one month.
The above Engines have been constructed with the **latest improvements** and of the **best material and workmanship.**
The JERSEY CITY LOCOMOTIVE WORKS are also furnishing **LOW MOOR TIRES,** which they *warrant* to fit Centers without boring or turning. All sizes, and from 5½ to 6½ inches in width, and from 2 to 3 inches in thickness.
Also, **Portable** and **Stationary Steam Engines** of all sizes, with **DAVIS'S PATENT BALANCE PISTON-VALVE,** constantly on hand or made to order on the shortest notice.
WILLIAM G. HAMILTON,
3m14 Vice-President and Engineer.

Steam Engines for Sale.
THE JERSEY CITY LOCOMOTIVE WORKS have on hand and for sale Six Five-Horse Portable Steam Engines, and Two Ten-Horse Steam Engines and Boilers, all in complete order and ready for use.
THE JERSEY CITY LOCOMOTIVE WORKS manufacture Tires, rolled to fit centers without boring; all descriptions of Railway Machinery, and Engines for Land, Canal, and River service.
WILLIAM G. HAMILTON,
3m14 Vice President and Engineer.

COL. LONG'S PATENT IRON RAILWAY BRIDGE.

THE plan of this Bridge is upon the principle of the SUSPENSION TRUSS; and the Iron is so arranged in its construction as to impart its greatest longitudinal strength to the whole work.

The subscribers are prepared to furnish large quantities of IRON BRIDGING, for Railroad or other purposes, at short notice, and at moderate prices.

M. M. WHITE & CO., Proprietors,
GLOBE IRON WORKS, 33d St., near 11th Avenue, N. Y.

ROOFING

This Roofing can be applied to new and old Roofs of all kinds. It is FIRE and WATER PROOF.

Gutta Percha Cement applied to Tin and other Metal Roofs will render them perfectly and permanently water-tight.

JOHNS & CROSLEY,
Sole Manufacturers
WHOLESALE WAREHOUSE:
78 William st., cor. Liberty, New York.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

ENGINEERING WORKS.

LYONS' TABLES.

To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
				14.	" " 20 "		1½ to 1
2.	For Side Hill Cuts and Fills.			15.	" " 24 "		¾ to 1
3.	Base 12 ft. Slopes		1½ to 1	16.	" " 26 "		1½ to 1
4.	" 14 "		1½ to 1	17.	" " 28 "		1½ to 1
5.	" 15 "		¾ to 1	18.	" " 28 "		¾ to 1
6.	" 15 "		1 to 1	19.	" " 28 "		¾ to 1
7.	" 15 "		1½ to 1	20.	" " 30 "		1 to 1
8.	" 16 "		¾ to 1	21.	" " 30 "		1¼ to 1
9	" 16 "		1 to 1	22.	" " 30 "		1½ to 1
10.	" 18 "		¾ to 1	23.	" " 32 "		1 to 1
11.	" 18 "		¾ to 1	24.	" " 32 "		1¼ to 1
12.	" 18 "		1 to 1				

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, May 17, 1862.

Proposed Enlargement of our Canal Locks.

The project for enlarging the principal canals of this State at the expense of the general government, is now before Congress. With the main outlines of it, as proposed by Mr. Ruggles, supported by the Chamber of Commerce and sanctioned by the State Legislature, the reader is doubtless familiar. In brief, it is proposed to enlarge one tier of locks, so as to permit the passage through them of vessels one hundred and fifty feet in length by twenty-five feet in breadth, or of about the dimensions of the *Monitor*. The estimates which have been carefully prepared by Mr. Ruggles, the late Superintendent, show that the entire cost of the work on the Erie and Oswego Canals would not exceed $3,441,000. To render the Champlain Canal fit for the passage of vessels of an equal size would require the further sum of $3,770,190. But this would comprise the deepening and widening of the channel all the way, together with increasing the capacity of the locks.

The subject presents itself to public attention from two different points of view.

First, as a means of national protection. The people of these States have paid dearly for their fancied dream of peace and security. A little wholesome suspicion that war was impending, a little timely precaution in anticipation of its outbreak, might have saved them the loss of thousands of lives and of hundred of millions in money. A moderate expenditure in season might have either prevented hostilities altogether or made these of much less duration and cost. Due preparation would thus have been an avenue to peace. One example of the sort ought to be sufficient for a generation at least. An intelligent people having been once caught should never be found a second time in the same predicament. We hear it repeatedly said that there is no danger of war with Great Britain; that, as our people have no intention of invading her soil, her government can never desire to obstruct our progress or come into collision with us as a nation. This is all very good in its way, only it does not warrant the conclusion that, therefore, we should rest satisfied with an avenue to the great lakes inferior to her own. This is the gist of the whole matter. No community on the globe can feel more desirous of international amity than the commercial city of New York. But peace loses one of its securities so long as one nation possesses a monopoly of the means of hurting its neighbor. To make it permanent, it must be founded upon mutual respect as truly as equal right. Both parties must be made to feel that they run equal risk from a breach of comity or justice. Otherwise, there is a temptation placed in the way of the strong to make aggressions on the weak, the better prepared on the worse prepared. Even the feeling that such *may* be the case is irritating and might alone lead to discord.

Such is precisely the nature of the situation at this moment. By the improved navigation of the St. Lawrence and the Welland Canal, vessels drawing nine feet of water may ascend from the Atlantic to the upper lakes, at any time during the season of navigation. A vast and rapidly growing commerce is carried on there, nearly three-fourths of it in American vessels. Five years ago our safety might have been estimated as being in the ratio of our commercial marine; but the introduction of iron-clad vessels has literally restored the era when "one man can chase a thousand, and two put ten thousand to flight." The greater the number of wooden vessels, the more we are exposed. The nation is thus weak in proportion to what it formerly considered its strength. Our means of protection require themselves to be protected. Without equal facilities to those enjoyed by other nations for conferring this protection, we are placing ourselves in an attitude to invite aggression at the hands of a stronger power, no matter how well disposed we ourselves may be. Nay, we expose not alone the shipping of the great lakes to destruction, but a score of cities, with numerous villages and an exceedingly prosperous country; also thousands of miles of railroads and canals, including the very work which parsimony would be content to see remain as only a wet ditch; but which might with more propriety be designated as the *last* ditch.

The present treaty between this country and Great Britain limits each power to the possession of one hundred-ton-sloop on Lake Erie, one on Lake Ontario and one on Lake Champlain. Neither party can set aside the obligation without giving six months' notice; and it is probable that such notice would be accepted by the other as a declaration of war. What use would be made of the works of internal improvement constructed in Canada, in the event of hostilities between us, was clearly shown by the London journals, during the discussion of the Trent difficulty.

Second, as to its commercial aspect the same reasons may offered. The possession of first-class facilities by which the heavy merchandise of the North-west may reach an American port on the Atlantic, is indispensable. As a commercial people we cannot afford to be excelled by our neighbors in their canals and railroads. It would be unbecoming our rank as much as our interests. The time has come when a ship canal is needed to connect the great lakes with the Hudson and with the Mississippi. It is requisite that we should have a navigable channel by which a large vessel may load at St. Paul, St. Louis, or St. Joseph, and thence proceed through our magnificent inland seas to Chicago, Buffalo, Albany, and New York. This is as much and as truly a national *want* at the present time as was the Erie Canal when DeWitt Clinton proposed its construction. Our enlarged works are destined to be as unfit to accom-

modate the growing commerce which will pour down from the great North-west as was the four foot channel scooped out in the last generation. Our public works must grow in capacity as the population of this country increases in numbers and wealth. This truth is as obvious as a law of nature.

There need be no jealousy shown toward this projected improvement on the part of other public works or other communities. A great artery, like the Enlarged Erie Canal, distributes as well as receives the life-blood of commerce. It creates for the railroad increased travel and draws to it those lighter and more perishable articles that properly belong to it. The canal simply retains the surplusage, that would either not find its way to tide-water at all, or at most in insignificant quantities. The canal and railway are partners in business, not rivals. So are our States and cities. From every additional ton of merhandise received here, Philadelphia derives an advantage, as does New York from every ton of coal or iron dug in the hills of Pennsylvania.

As to who shall foot the bill, the question is a simple one. The general government owes the citizens of the country protection—not those of Washington or New York alone, but those of Oswego, Buffalo, Cleveland, Toledo, Detroit, Milwaukee, Chicago and every other spot that may be menaced by an enemy. It owes protection to the lake commerce as much as to that on the ocean. Wherever danger is possible, there its powerful hand ought to be felt. The first and greatest claim, therefore, legitimately must be made upon that authority. Our State offers the use gratuitously of the vast works built at her expense; but as she would ultimately derive some profit from the improvement, though not to any great extent at present, there would be every propriety in her contributing in part toward the outlay. As the people of both State and nation are interested in the project, each should look at it from a broad and generous point of view.

North Missouri Railroad.

We have in Missouri 785 miles of railroad completed, as follows:

Pacific Railroad	189 miles.
Northwest Branch of Pacific Railroad	77 "
About thirty miles more nearly ready for the rails.	
Hannibal and St. Joseph Railroad	208 "
North Missouri Railroad	170 "
Twelve miles north of its junction with the Hannibal and St. Joseph road is ready for the rails.	
St. Louis and Iron Mountain Railroad	90 "
Cairo and Fulton Railroad	27 "
Platte County Railroad	44 "
Making of railroad	785 "

The North Missouri Railroad is now completed to its junction with the Hannibal and St. Joseph road, a length of one hundred and seventy miles. It has ready for iron above the Hannibal and St. Joseph road, twelve miles, which when completed will leave only fifty-eight miles to be finished to carry it to the Iowa State line. When it reaches the Iowa State line, it meets a company ready to build the road to Ottumwa, on the same gauge with the North Missouri, and when completed to Ottumwa it is put in connection with the whole railroad system of Iowa, and by the Minnesota and Cedar Rapids road, will be connected with the railroads of Minnesota.

It may be well, whilst on this subject, to call attenten to the further fact, that the extension of the North Missouri road from a point in Randolph county to Brunswick, in Chariton county, has been partially graded, and could soon be got ready for the iron and ties. This extension of forty miles, when completed, will give the North Missouri road an immense increase of business from the Chariton, Saline and adjoining counties.

It is not proposed, however, to stop the extension at Brunswick, but to continue it on until it reaches St. Joseph, when it will render the North Missouri road and Missouri independent of any railroad corporation that may labor to injure either.

When this extension is completed to St. Joseph, as it surely will be sooner than most persons imagine, Missouri will be in position to tap the great Pacific railroad by her Pacific or North Missouri road. This will be of immense advantage to us. There will be no route by which that rich trade can escape from St. Louis.—*St. Louis Repubican.*

Long Island Railroad.

We have received a copy of the Eighteenth Annual Report of the directors of this company to the stockholders for the fiscal year ending March 31, 1862. The receipts from earnings, etc. during that time were:

From passengers		$152,425 63
" freight		106,449 95
" mails, etc.		10,046 10
" rents and interest		7,311 97
" unloading freight		521 49
		$276,755 14

And the expenses were:

Repairs of road	$33,999 70	
" engines	14,182 01

	$183,833 64

The past year has been marked by several interesting and important transactions, viz: The change of the western terminus of the road; adjustment of the Long Island Railroad stock; contract for operating the road; and the commencement of payment of dividends by the company.

On the 10th of May, 1861, the business of the company was removed from Atlantic st., Brooklyn, and transferred to the new depot of the company at Hunter's Point. Arrangements had previously been made with the East River Ferry Company to run a line of boats between Hunter's Point and James Slip, N. Y., in connection with the trains. The same company also operate a ferry between Hunter's Point and 34th st.—thus making a double connection with the city.

The change of terminus has been tried under very unfavorable circumstances—business upon the Island has been very much depressed, and at the same time, Chambers st., leading from Broadway to the railroad landing at James Slip has remained unfinished, and that terminus consequently without an omnibus route leading up Broadway and into the heart of the city. The Brooklyn City Railroad has not yet been extended to Hunter's Point, leaving the connection with that city broken and inconvenient. Yet under all these disadvantages, the board have evidence that the change was a wise one, and will be found to result to the permanent benefit of the company.

In 1840, a loan of $100,000 of New York State stock was made to the company, redeemable at the pleasure of the Legislature after Aug. 1, 1861—the company to pay 6 per cent. interest, and $1,000 for a sinking fund annually. As the company might be called upon on the 1st of August, 1861, to pay the whole loan, and as the New York State stocks were at and above par in 1858, it occurred to the officers of the company, that by offering to the holders to pay off the loan at maturity, or to give them the option of allowing it to extend to 1876, the interest might be reduced from 6 to 5 per cent. With that view an act was obtained from the Legislature, fixing August 1, 1876, as the time for its reimbursement, and reducing the rate of interest thereon, after August 1, 1861, provided such stock was presented to the comptroller for his endorsement on or before Jan. 1, 1861—the sinking fund for its redemption being increased to $2,000 annually. Before the time arrived for the proposed change, the political prospects of the country had become so uncertain, that the New York State 5 per cents fell below par, and the holders preferred having the stock paid at maturity, and declined to present it for endorsement. The company were therefore obliged either to take up the stock on the 1st of January, and present it to the comptroller for endorsement, or to furnish the money on the 1st of August for its redemption. The board decided upon the former course, and purchased $68,000 of the stock in the market at par, and obtained upon it the endorsement of the comptroller. The balance of the loan, $32,000, was paid off by the company's sinking fund in the hands of the State. The stock remained at from 90 to 95 until March, when it rose to par, and the company disposed of $60,000 of it at par, and now holds but $8,000. By this arrangement, the company save one per cent. per annum interest; and their annual payment is $5,400, while under the old law it was $7,000—making a saving to the company, by the time the loan becomes due, of about $20,000.

The road is now operated under contract by Mr. Josiah O. Stearns, late Assistant Superintendent of the Central New Jersey Railroad. This contract commenced on the 1st of October, 1861, and is made for five years, the company reserving the right to terminate it at any time by giving 30 days' notice. The price paid by the company is $11,000 per month. The contractor to run the trains 220,000 miles for this price. Any mileage beyond this the company is to pay for at 35 cents per mile run. The company retains the appoint-

ment of all conductors and agents receiving money, establishes rates of fare and freight, and decides as to number and hour of starting trains; while the contractor employs all others required to operate the road, maintains in good repair the road, engines, cars, buildings, etc., pays all operating expenses, except advertising, law, insurance, rent, salaries of president, secretary and treasurer and a certain proportion of damages.

A dividend of 75 cents per share, or 1½ per cent. was paid to the stockholders on the 21st of April last. With the contingent fund on hand, invested chiefly in the bonds of the company, and collaterals held on account of the contractor of the new road, the board believe they can maintain the payment of that amount semi-annually, and, with the return of peace and improved business hope to increase it.

As stated in the last annual report, owing to the failure of the party building the new road from Jamaica to Hunter's Point, the company were compelled to assume its completion. The land damage unpaid, and the unfinished work, required a larger amount of money than was supposed. Although the securities held by the company have been considerably depreciated, yet it is believed there will be realized therefrom sufficient to cover the amount advanced by the company.

The company had hoped to have commenced the payment of dividends at an earlier day; but were delayed by the necessity of arranging for the extension and payment of the State stock, and the completion of the new road, depots, wharf, etc., requiring for these purposes, the use of most of the ready cash of the company.

There was paid upon account of the new road, as the work progressed, in cash, as per contract $62,000
Land for new depot 10,000
Depot, engine and freight houses, tanks, docks, etc., say 73,000
Loaned to the contractor, and expended to finish the work, say 66,000

Making a total of $211,000

—besides the State stock above mentioned.

The financial condition of the company is as follows:

New York State loan, 1st lien at 5 per cent. due Aug. 1, 1876	$68,000 00
Morris Canal Bank loan, with interest to April 1, 1862, amount of bonds, $25,035 36	47,400 26
Hemstead Branch bonds	300 00
Loan of 1850, mortgage bonds due in 1860, 6 per cent	500,000 00
Loan of 1860, mortgage bonds on extension from Jamaica to Hunter's Point, due in 1890, 7 per ct..	175,000 00
Due for rent, interest coupons not presented, and contractor	14,157 59
Capital stock 60,000 shares at $50..	3,000,000 00
	$3,804,857 85
The company hold of their own bonds.	$82,500 00
Stock of Syosset branch company	1,000 00
Cash prepared from dividend, and toward payment of Morris Canal bank loan, (including the State stock $8,000)	76,000 00
Claim against Litchfield, with collaterals, exclusive of interest, some work not done, use of engine, etc., about.	42,000 00
2,000 shares company's stock, cost, say.	23,000 00
Other claims, suspended debts	39,410 00
	$263,910 00

The number of passengers carried to and from Brooklyn in 1861 and to and from Hunter's Point in 1862, were as follows:

	1861.	1862.
Regular passengers	239,299	182,777
Commuters	109,384	68,579
Way passengers	64,367	63,397
	411,950	334,753
Miles run by engines—		
With passenger trains	171,303	160,743
" freight "	85,550	70,963
Ballasting new road	.....	4,097
	256,853	235,803

The trains of the Flushing Railroad Company now have their place of arrival and departure in the depot of this company at Hunter's Point, paying for the privilege $1,600 per annum.

The equipment of the road is not stated. One new engine has been purchased at a cost, delivered, of $6,700; and one disposed of to the government, together with two freight cars—the appraised value of the engine was $5,800, and of the cars, $450 and $425 respectively. If returned to the company, $12 per day is to be paid for the use of the engine, and $1 per day each for the use of the cars.

The Resources of Canada.

Of the numerous Colonial possessions of the British Crown, none has been more frequently under public discussion of late than Canada, and yet, perhaps, there is no colony that is so little known and appreciated by the general public.

The large amount of British capital sunk in unremunerative investments in the Province; the oppressive tariff on British manufactures; the cost to the mother-country for military expenditure in Canada; the explorations in the North-west Territory; the Parliamentary discussions on the Galway contract steamers, and the effects of the war in the United States, have all served to direct public attention very prominently towards Canada; and hence a few remarks on the resources of the colony may serve to remove mistaken impressions, and cause it to be better understood by those who have not had opportunity to examine in detail its position and progress.

Independently of its north-western possessions not yet open for settlement, the Province of Canada embraces about 350,000 square miles of territory, and is thus nearly three times as large as Prussia or the United Kingdom, and one-third larger than France.

In 1840, the two provinces of Upper and Lower Canada, which had hitherto possessed separate legislative bodies, were united; and the Constitution granted in 1841 conceded self-government and all the privileges which that involves; among others, freedom of commerce. Under the influence of this legislation, even with many adverse circumstances of financial crises and political feuds, Canada has made immense progress, without Europe seeming to be aware of it.

In 1851, the population of Western Canada was 952,004 souls, and of Eastern or Lower Canada 890,261,—making a total of 1,842,265. In 1861, the population of Western Canada was 1,395,222 souls, and of Eastern Canada 1,106,148, or a total of 2,501,370,—a decennial increase of 659,105.

As might be anticipated, the population of the Western division has increased most largely; for in 1851 the excess of population in Western Canada, the British quarter, was but 61,743 persons; while in 1861 there was an excess of 289,074 persons over the Eastern district, or French quarter. The disturbed condition of the American States, the cheapness and facility of access to Canada by steam and rail, the free grants of land offered to settlers, and the demand for agricultural produce, have greatly increased the tide of emigration to Canada. About a quarter of a million persons have left the United Kingdom for the British North American provinces (chiefly to Canada) in the last eleven years.

The Great Lakes and the River St. Lawrence form the natural outlet to the ocean for the countries situated on their waters, and afford great advantages for commercial communication with distant countries. The surplus waters of the Lakes are tributary to the St. Lawrence.

The canals of Canada overcome a total difference of height, from Lake Erie to the sea, of 564 feet.

The long channel of communication by river, canals, and lakes, of 1,500 to 2,000 miles, is practicable to sailing ships and steamboats of 300 to 400 tons.

In 1851, Mr. Andrews, in his official Report to the United States Government, estimated the value of the commerce of the Great Lakes to be about 80,000,000*l*. In the last ten years, there can be little doubt that this commerce has more than doubled. The amazing progress of this Lake commerce is an index to the strides of the Great West in productive resources. The American tonnage employed on the Lakes in 1845 was 94,000 tons, valued at 1,250,000*l*.; and in 1855, 250,000 tons, valued at 2,500,000*l*. The growth of Canadian tonnage on the Lakes has been quite as rapid as the American. In 1856, a Toronto paper gave a list of Canadian vessels on the Lakes, numbering 239, measuring 42,536 tons, and the cost of which had been about 500,000*l*. This list did not include, however, many small craft, and there is no law compelling registration: hence the estimate is necessarily imperfect. The present Lake tonnage may be taken to be fully 400,000 tons, of which two-thirds is American.

The amount of a nation's exports and imports is an excellent criterion by which to judge of the extent of its business and the greatness of its wealth. Measuring the prosperity and progress of Canada by this test, we find that in 1834 the sum total of her exports and imports amounted to but 2,082,567*l*; in 1851, they reached 7,049,081*l*; and in 1856, 15,126,300*l*. The year 1860 will be noted as an epoch in Canadian history, as being the first year in which the colonial exports exceeded the imports. The figures of the external trade in that year were—Value of imports, 6,888,324*l*; of exports, 6,926,360*l*. Total, 13,814,684*l*.

In 1849, the value of the trade between Canada and the United States was as follows:—

Exports to	$1,481,082
Imports from	4,243,724
Total	$5,724,806

In 1859 it had increased to—

Exports to	$13,922,314
Imports from	17,592,916
Total	$31,515,230

In 1860, the total trade with the Union was to the value of $37,971,427.

The Free Trade policy of Sir Robert Peel was viewed with alarm by the people of Canada on its initiation; and although injurious to many interests in its first effects, instead of resulting in permanent evil, it has proved of immense benefit to Canada. Since 1847, the trade of the province has increased in a very satisfactory manner. With their American neighbors it will be seen the Canadians now carry on a trade of the value of £7,594,300.

Several important steps have of late years been taken towards greater freedom of trade. Among these are the establishment of a free port, with a district attached to it, on the Gulf of St. Lawrence and at the Sault Ste. Marie; the opening of the whole line of canal, free of all but nominal toll, to vessels, whether American or British, proceeding to a Canadian port, or proceeding out to sea by the St. Lawrence; and the reduction of the duties on wines, spirits, and dried fruits. It is to be hoped that economy in the expenditure, and a better management of the revenue assessments of the province, will enable the oppressive existing tariff on British manufactures to be modified.

Upon the union of the two provinces, in 1841, upwards of £1,500,000 sterling was voted in the first session for the St. Lawrence and Welland and the Burlington Bay Canals, for harbors upon the

Lakes, and other internal improvements. The whole expenditure upon the public works connected with canals, rivers, lighthouses, roads, &c., has exceeded £5,500,000 sterling. There are upwards of 3000 miles of railway now completed or in progress: the total cost of construction of these, including the Victoria Bridge across the St. Lawrence, will amount to not less than £14,000,000.

Whatever may be the future value of Canadian railways as investments to shareholders, the advantages they impart to the sections of country they serve cannot be questioned. The main through lines will be the channel of communication for the continued growth of the great West, while the local and branch lines will be the means of peopling the forests through which they pass, and giving that value to the timber and soil which the mere fact of their having become accessible instantly imparts to them. There are now nearly 2000 miles of railway in operation in Canada, exclusive of the Grand Trunk extension to Portland (164 miles), which though on American soil, yet having been constructed to secure an ocean port in winter, is really a Canadian road. The province has subsidised a weekly line of ocean steamers of its own, which perform the mail service with great regularity. The province pays to the Canadian Mail Packet Company £45,000 per annum.

Postal communication throughout the province is very complete. The most distant hamlet has its post-office, and the number of post-offices in Canada is now 1720. The expenditure, beyond receipts on post-office service, is about £60,000 per annum. The electric telegraph passes through every village in the colony, and the number of miles in operation is at present 4200. The approach or arrival of a steamer or sailing vessel at Quebec is known very nearly at the same moment in every town of the province.

The total tonnage, inwards and outwards, in 1856, was 12,250,000 tons, of which, in round numbers, 6,300,000 tons was Canadian steamers, and 4,760,000 tons American steamers; 830,000 tons Canadian sailing vessels, and 346,000 tons American sailing vessels. In 1860, 29,502 vessels, of 3,030,730 tons, passed through the provincial canals.

The natural resources of the country are unbounded, and they are provided, like all the gifts of Providence, with a distinct reference to each other which makes them doubly valuable. Waterpower, that mighty engine of industry, is everywhere abundant, and just where it is required—in the midst of magnificent forests of valuable timber, for which an inexhaustible market is springing up in the prairie regions in the Far West of America and in Europe.

The value of all the vegetable productions of Canada in 1851 was estimated at £9,250,000, of which grain and flour constuted nearly two-thirds. At the present time this value has probably been doubled, for the exports alone of vegetable products are about £6,000,000 in value.

The agricultural produce of Canada consists chiefly of cereals and fodder, and the raising of live stock could consequently be carried on on a very large scale. In 1859, the exports included 2,635,000 bushels of oats, 1,766,000 of barley and rye, 690,863 of peas, nearly 2,000,000 bushels of wheat, 427,007 barrels of wheat flour and meal, and other articles the produce of the soil, to the aggregate value of £1,468,000.

In 1820, the total assessable property of Western Canada was estimated at £2,500,000; in 1854 it amounted to £50,000,000, exclusive of the value of public lands, public timber, and minerals. Nothing, however, tends more to illustrate the rapid growth of Western Canada than the difference between its exports of wheat at different periods.

In 1838, the quantity of wheat exported from Canada West amounted to only 296,620 bushels; in 1852 it reached 5,500,000 bushels.

In 1850, the number of bushels of wheat produced in Western Canada was 12,675,603, an average yield of 16¼ bushels per acre—nearly as much as was grown in Ohio, the most fertile and productive of the American States, and an average yield of one-third more per acre. In 1856, the gross wheat production of all Canada was 26,555,000 bushels.

(To be continued.)

Pennsylvania Railroad Company--The Parkesburg Station.

LANDS GIVEN TO THE PHILADELPHIA AND COLUMBIA R. R. CO., STILL HELD IN FEE BY THE PENNSYLVANIA R. R. CO.: THE VALUE OF RAILROADS IN IMPROVING REAL PROPERTY.

In 1855, one John G. Parke was the proprietor of certain real estate, situated in Ladsbury township, Chester County, on the line of the Philadelphia and Columbia Railroad. With a view of assisting the company, he conveyed by deed dated December 30th, 1855, a part of such real estate upon which the Parkesburg Railroad station is now located, to the State of Pennsylvania, and her assigns. By the recital in this deed, it appears that the proper officers of the State had located a water station and erected a reservoir for the use of the Philadelphia and Columbia Railroad upon the property of the said Parke, opposite to or near to the junction of the McCalls Ferry and Lancaster and West Chester State road, in said township, and were about to erect at the same place engine houses, workshops and other buildings, fixtures and appurtenances necessary to the use of the said State Railroad, and therefore the said Parke, in consideration of the advantage to him of having said water station and public buildings, &c., upon his real estate, and being desirous to facilitate the operations of the State, granted the land, together with a right to so much of the water of the spring then running through pipes laid by the said Parke to his said public house and the said water station, as may be necessary to supply the steam cars of the State or her assigns, and also the steam engines about to be erected on the lot thereby conveyed, first receiving for the use of said public house and its appurtenances, so much of the water as may be necessary. The remainder of the water after the right granted to the State, belonging exclusively to the said Parke, his heirs and assigns. The State or her assigns to keep the pipes in repair, and to supply and lay down others when necessary or expedient, and to have the privilege of adding, if necessary, the water of any other spring on that side of the creek on the land of the said Parke, capable of being brought along said pipes to a proper level.

By another deed dated the 27th September, 1851, his children and heirs, granted to the State 265 feet square of land adjoining on the southern side of the lot already conveyed. On the first lot the Pennsylvania State shops, workmen's dwelling and other buildings, engines, fixtures and appurtenances were erected, and the second lot was required for the purpose of building thereon, a locomotive depot, and other public buildings, engines, fixtures and appurtenances. A similar water privilege to that granted in the first conveyance is granted in this, accompanying the lot conveyed.

In each deed, however, there was a proviso or condition, in the following words:

Provided, That if ever said lot and water right, and their building fixtures, and other appurtenances, should be any longer needed for the purposes for which they are granted; or if ever the State, or her officers, agents, tenants, lessees or assigns, or other occupiers of said lot and right should undertake to appropriate, use or apply said lot or water right, or their appurtenances, to any other object than the *bona fide* purpose for which they are hereby given and conveyed to the State, then and in that case the said lot, water right, privileges and appurtenances, or either of them so abandoned or misused, shall immediately revert to the donor, his heirs and assigns, and become a part of the real estate and its appurtenances, from which they are hereby separated, as if it or they never had been given to the State."

Under and by virtue of an act of the General Assembly of the State of Pennsylvania, passed May 15th, 1857, the Secretary of the Commonwealth, under the great seal of the State, transferred to the Pennsylvania Railroad Company their successors and assigns, the Philadelphia and Columbia Railroad, the two lots of ground above mentioned.

The heirs of John G. Parke, now sought to obtain a decree of the court declaring that the lands conveyed as above described, reverted back to them, under the provisions of the *proviso*; the company having notified them of an intention to abandon the premises, and, of course, the land could no longer be needed by the company for the purposes for which they were conveyed.

The station took its name from Mr. Parke, and since the construction of the road has become a place of some importance, greatly enhancing the value of the property in the neighborhood.

The case was tried in the Court of Common Pleas for Chester County; and the case was then taken on appeal to the Supreme Court of the State of Pennsylvania, where the title of the Pennsylvania Railroad Company to the property was declared to be still unforfeited. The following is taken from the opinion of the court, delivered at the decision of the case.

READ, J.—It is clear that the State had, and of course its assignee, the Pennsylvania Railroad Company, had a fee simple in these lots which, if the conditions were not broken, might last forever.

There were, in fact, two conditions. One was that if the State or her assigns should undertake to appropriate, use or apply said lot or water right or their appurtenances, to any other object than the *bona fide* purpose for which they were given or conveyed, then the same or either of them so misused, shall revert to the donor (or donor's) their heirs and assigns. This condition or part of the condition never was broken, and it therefore forms no part of this case. The other condition was, "that if ever said lot and water right, and their buildings, fixtures and other appurtenances, or either of them, should not be any longer needed for the purposes for which they are granted," then and in that case, the said lot, water right, privileges and appurtenances, or either of them so abandoned, "shall immediately revert to the donor (or donors), their heirs and assigns and become a part of the real estate and its appurtenances from which they are hereby seperated, as if it or they never had been given to the State."

The State and its grantee had the clear right to add to, alter and diminish, any buildings erected by themselves and also to remove all fixtures and machinery, and replace them if they deemed it expedient, or put in new ones or other descriptions of machinery, for the purposes of the road, or finally to remove them altogether. This is not denied by the plaintiffs, but they say that the defendants having notified them of their intention to abandon, that was an immediate abandonment and they could remove nothing afterwards. The

condition is, that if they should be no longer needed; then the notice in reality was that they would be no longer needed after say the first of April, 1861, for that is the true meaning of that part of the case stated. "Some time in December, 1860, the defendants determined to cease to use and occupy the said machine shop and other buildings on or about the first of April then next ensuing;" that is, that they then would not be any longer needed, "of which intention the plaintiffs were soon after verbally informed by the defendants;" all this relates to their not being needed after that day; and it would have been no clearer, though somewhat stronger, if the time fixed had been the first of April, 1871, and this is definitely fixed by the preceding sentence in the case stated.

"The said defendants succeeded to the ownership and possession of the said machine shop and other buildings erected by the said Commonwealth, and also to all the said fixtures and machinery, and continued in the possession and ownership of the same up to the 1st of April, 1861." That is, their possession and ownership were the same up to that date, as it had uniformly been since their purchase in 1857, and it is clear that if they had changed their minds before their actual abandonment and consequent breach of the condition, they could have continued their ownership as tenants in fee simple indefinitely.

It is clear then, that the defendants had the right to remove, as they did, the fixtures and machinery mentioned in the schedule annexed as part of the case. This right also appears to be recognized by the very words of the condition, for the reverter to the grantors is to be of "the said lot, water right privileges and appurtenances, or either of them so abandoned, and which to become a part of the real estate *from which they are hereby separated*, as if it or they never had been given to the State;" excluding in terms the idea that the fixtures and machinery of the State were to revert to persons who never had owned them.

The founder of Parkesburg and his heirs have received large benefits from the State—a town has been built by State patronage, and the two lots are returned to their original owners covered with valuable buildings. The plaintiff's case is deficient in law, and clearly so in common equity.

Judgment reversed, and judgment on the case stated for the defendants.

Erie and Pittsburg Railroad.

We learn from the Erie, Pa., *Observer*, that the unfinished line of this road has been sub-let for 25 miles, from Jamestown to Middlesex, and work will commence as soon as possible.

Railroad from Corry to Titusville.

Under a charter from the Legislature of Pennsylvania a company is now in preparation to contruct a railroad from Corry to Titusville. We are informed by persons connected with the enterprise that the work is rapidly being laid out by engineers and that several hundred hands are by this time at work on the road. The same parties who have charge of the building of the Atlantic and Great Western Road are putting this line through although the Oil Creek road is owned by another and separate corporation from the Atlantic and Great Western. The track is to be same gauge as the Atlantic and Great Western, but it will connect at Corry with both the Atlantic and Great Western and Philadelphia and Erie Roads. The road will be something over 30 miles long, it being contemplated to extend it through Titusville to the mouth of Oil Creek.—*Jamestown Journal.*

N. B.—Silver rouble = 75 cents.
Pood = 36 lbs. avoird.
Chetvert = 5/6 bush.
Archine = 28 inches.

Pittsburg, Fort Wayne and Chicago R. R.

The first mortgage bonds of this company now sell at 95. The second mortgage bonds are now about being delivered by the trustees, and are sought after by investors at 80, which for such a security is considered quite low.

The net earnings of this road in 1851 were about $900,000, and so far this year the receipts are largely in excess of last. The interest on the first and second mortgages is less than $730,000 a year. Under the reorganization of the Terre Haute and Alton and Belleville and Illinoistown railroad, the new bond and stock certificates are being printed. Present quotations may mislead the public unless they take into consideration the accumulation of interest on the old securities. The quotations of to-day are for first mortgage bonds 106 per cent.; this includes two coupons in course of payment, reducing the price to 99, and five coupons founded, which, with interest on the coupons, will make six new bonds for five old bonds, and will leave the actual cost of $1,000 new first mortgage bonds, drawing interest from 1st February last, 82½ per cent. On the second mortgage, now selling for about 75 per cent., there is an accumulation of interest coupons and instalments paid up, which will entitle the holder of each bond to over $1,600 of new bonds, which will reduce the actual cost of the new second mortgage bonds to about 46 per cent.—*Post.*

Railroad Earnings--Weekly.

The receipts of the Grand Trunk Railway of Canada for the week ending May 3d, 1862, were:

15,004 passengers	$23,318 37
Mails and sundries	2,925 58
Freight and live stock	44,282 36
Total	$70,526 31
Corresponding week, 1861	66,882 99
Increase	$3,643 32

The earnings of the Galena and Chicago Railroad the 1st week in May, 1862, were $28,762
Do., 1861 38,015

Decrease $9,253

The earnings of the Toledo and Wabash Railroad for 1st week of May, 1862, were $25,005 33
Do., 1861 17,656 95

Increase $7,348 38

The Michigan Central earned in the 1st week in May, 1862 $44,161 41
Do., 1861 36,288 79

Increase $7,872 62

The Chicago and Rock Island Railroad earned the 1st week of May, 1862 $22,400
Do., 1861 22,900

Decrease $500

The first week in May, 1862, on the Rock Island was $3,483 more than the last week in April, 1862.

The Michigan Southern earnings the first week in May are $11,000 ahead of last year.

The gain in traffic on the Cleveland, Columbus and Cincinnati Railroad, the first week in May, is reported at $7,000.

The traffic of the Great Western Railway of Canada for the week ending May 9, 1862, was as follows:

Passenger	$15,578 37
Freight and live stock	27,684 40
Mails and sundries	1,639 78
Total	$44,902 55
Corresponding week of last year	37,719 01
Increase	$7,183 54

The earnings of the St. Louis, Alton and Chicago Railroad for the 1st week in May, were:

1862	$17,733 95
1861	19,078 82
Decrease	$1,334 87

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 1st week of May, 1862, were $23,298 13
Corresponding week, 1861 18,977 87

Increase $4,320 26

Steam Engines.

The Corliss Steam Engine Company, of Providence, R. I., have done a fair amount of work during the past year, notwithanding the dullness of trade. Among the large engines recently put up by them are a pair of nine hundred horse-power for the Naumkeag Steam Mills, Salem; one each of four hundred and fifty horse-power for the Wamsutta Mills, New Bedford, Atlantic Mills, Lawrence, and Lowell Bleachery and Dye Works, Lowell. It is the custom of the Corliss Company to keep a number of their smaller sized engines on hand; also parts of their larger ones to enable them to fill orders promptly. The many excellent qualities of their steam engines make them popular with machinists and manufacturers.

Coal Oil.

The Legislature of Kentucky have passed an act, which requires an inspection of burning oils refined from petroleum and crude coal oil. It imposes a fine of *twenty dollars* for each sale of such burning oil without inspection. It requires that the oil shall be tested, so as not to give out an explosive vapor at a temperature less than 150° Fahrenheit.

Oil is sent down the Alleghany river from Oil City and Tidioute in boxes. They are made tight, 16 by 1⅔ feet, and are filled from the wells or tanks along the creeks; twenty are fastened together to form a river fleet. The fleet is run to Pittsburg, where the oil is put into barrels and forwarded to market.

Albany and Susquehanna Railroad.

This road will be in operation the present season to Central Bridge, Schoharie county, and polls have been ordered to be placed along the line, by a Telegraph Company which is independent of the Railroad Company.—*Albany E. Journal.*

New Locomotive.

A a new, first-class locomotive was recently put on the Atlantic and Great Western Railroad, to meet the increasing business of the road. It is called "No. 4." Was manufactured by Messrs. DANFORTH, COOK & Co., Patterson, N. J., at a cost of $10,000.—*Jamestown Journal.*

Resumption of Trade with the South.

The reopening of the port of New Orleans to trade is the event of the day in commercial circles. It is understood that licenses to trade there will shortly be granted by our Custom House—probably within a week. The first goods which reach New Orleans from the outside world will probably, however, reach there from the West by way of the river. In the course of a few days it is confidently anticipated that the whole river will be in our hands. There will then be no impediment in the way of a resumption of trade, and it will be safe to look for an interchange of products at Cairo. Louisiana, Mississippi and other cotton States are in want of all kinds of groceries, all kinds of dry goods and all kinds of manufactured articles. They have an enormous quantity of cotton and sugar, which they will be very willing to exchange for things which they need more. When the interchange once begins, it will be commensurate with the extent of country to be supplied on the one hand and the profits of the trade on the other. Cotton is said to be worth 5 cents and sugar 2 on the Mississippi, while salt sells for $20 a sack, coffee for $1 50 a pound, butter for $1 25 a pound, and ordinary cotton goods cannot be had at any price. The managers of the Illinois Central expect to have more traffic than they can manage. They look to see their earnings this summer heavier than were ever known. During the year which follows the present, it is probable that the gross receipts of the Illinois Central will exceed three millions of dollars.—*Herald.*

Railroad Earnings--Monthly.

The earnings of the Cleveland and Pittsburg Railroad for April, 1862, were $100,694 79
Do., 1861 99,510 65

Increase $1,184 14

The earnings of the Buffalo, New York and Erie Railway, for the month of April were:

1862	$71,028 30
1861	58,881 25
Increase	$12,147 05

The receipts of the New York and Harlem Railroad for April are as follows:

April, 1862	$94,957 56
" 1861	94,630 08
Increase	$327 48

The Albany Express passenger trains were run in April, 1861, and not in 1862.

The statement of the Illinois Central Railroad for March is as follows, (the business, it will be seen, shows but a small falling off from last year):

Land Department.

Acres Construction Lands sold	4,370.49	for	$40,706 01
Acres Interest Fund L'ds sold	360.00	"	4,556 40
Acres Free Lands sold	1,334.68	"	14,290 17
Total sales during the month	6,065.17	for	$59,552 58
To which add Town Lot sales			2,254 94
Total of all			$71,807 53
Acres land sold since Jan'y 1, 1862	27,440.19	for	$331,856 53
Acres sold prev'sly (net sales)	1,236,971.08	for	16,161,203 15
Total	1,264,411.27	for	16,493,059 68
Construction bonds canceled previous to March 31			$2,101,500 00
Cash collected in April			14,786 14
50,000 bushels corn received on hand.			
Net collections to March 31, 1862			4,178,423 90

Traffic Department.

Receipts from Passengers		$94,476 03
" Freight		78,566 75
" Mails		6,858 34
" Rent of road		6,333 00
" Other sources		2,750 00
Total receipts for April, 1862		$183,484 12
Do. do. 1861		192,053 96

Original land grant, 2,595,000 acres; railway, 706 miles of main track, and 97 miles of sidings, 113 engines, 2,456 cars. Funded debt, $15,235,500.

The earnings of the Milwaukee and Prairie du Chien Railroad for April were as follows:

Passengers	$16,766 12
Freight	40,414 92
Mails	1,733 87
Rents	2,844 50
Total	$61,759 41
Corresponding month, 1861	49,102 19
Increase	$12,657 22

The gain in traffic on the Cleveland, Columbus and Cincinnati Railroad, in April, was $21,000.

AMERICAN RAILROAD BOND LIST.

American Railroad Journal.

Saturday, May 17, 1862.

Railroad Prospects.

In a review of the Railroads of Great Britain, the London *Times* recently observed that, taken as a whole, these works had already become more profitable than government consols, with the prospect of steady improvement for years to come; though the market value of their stocks was much below that of the national securities.

In that statement there is a valuable truth taught the people of this country, as well as of England. Though the railroads of the two country differ widely, owing to the varied conditions of each, in one respect their history has been alike. Their great value having been established, the whole energies of both peoples were concentrated upon them for several years in succession, until they were found to penetrate almost every section of both countries. There were, first, large profits accruing to the stockholders, connected with vast benefits to the public; next, a mania for building more works of the sort, as if there could be no danger from exceeding the legitimate demand for such facilities; then followed disasters and failures of various kinds, in which mistrust reigned as universally as confidence had done before. A few engineers were found to be reckless, and forthwith the whole profession was denounced as unfit to be entrusted with human life. Certain financial officers had abused the trust reposed in them, and every president or agent began to be regarded with suspicion. The good suffered equally with the bad, from having been caught in evil company. Certain lines had been built as rivals or in advance of the public wants, and so the whole railroad interest was placed under ban. It was saddled with the revulsion of 1857–8. It was a good enough convenience to the public; but a slough which any amount of net earnings could never fill, much less yield dividends, except in a few favored cases. Such, we say, were the general feelings respecting the financial prospects of our railroads within less than five years.

In all these respects Great Britain had a similar experience. She, too, had her attack of the railway fever, which came to a crisis ten years earlier than in this country. Years followed as gloomy as have ever been experienced here. Little by little individual lines recovered themselves. The dividends at first declared were small in amount, only serving to keep alive hope in the future. It began to be seen that after a road was put in proper condition, traffic was likely to double every ten or twelve years, while the expenses advanced in a much smaller ratio. Here was a ray of daylight, which has steadily brightened until the result is before us, as announced in the most potent of English journals.

The railroads of this country have passed that stage in which they are viewed with disfavor as a rule. Slowly and steadily they are regaining confidence, as having a future before them equal to the same class of works in any other country. Why should they not? There is surely greater *room* here for expansion in business than in European States. The United States are more rapidly filling up with an intelligent, active and prosperous class of people than any other country. In no other region on the face of the globe is there such a development of national industry—so extensive, so varied, so ready to adopt the latest improvements. Granted that the roads are built and able to pay their way at first, and we ask no more to ensure their ultimate success. If upon this basis a margin of net profits can any where be created, this is the place, above all others, where that is practicable. If other communities groped their way through the darkness to triumph, surely we can do it, now that we have their experience to guide us.

One by one the old lines, which were pronounced failures, begin to declare dividends. The Baltimore and Ohio struggled for a quarter of a century before it could divide a dollar. So did the Long Island road, which has lately declared its first dividend. The experience of the Philadelphia, Wilmington and Baltimore was the same. We might name a number of others, but these will suffice. They render it certain that where a road has been judiciously laid out, even though vast sums may have been improvidently spent at first, good management may nevertheless bring it up to the paying point. There is practically no limit to the traffic which may be drawn to it, especially that of a local character, which has been so generally and fatally overlooked hitherto.

So much for the remoter prospects of that vital public interest. As to immediate results it is more difficult to lay down any general rule. The war, while proving temporarily disastrous to a few railroads, has been a source of great profit to others. Most of the North and South lines traversing the border free States have been largely benefitted thereby. Many of the East and West lines have also profited handsomely; but the principal source of the increased receipts of the latter is to be found in the transportation of grain for export to Europe, rather than the demands of the general government. Taken as a whole, we doubt not the railroads in the free States would have been in a more prosperous condition to-day, had war never broken out. If we take into account the period of depression which may be reasonably expected after the return of peace, the loss of traffic will doubtless be very considerable. But

the elasticity of our people is such that business of every kind will soon resume its wonted channels; and the great interest in whose behalf we are engaged will be among the first to participate in returning prosperity.

Long Island Railroad.

We give elsewhere the report of this Company for the past fiscal year. We have previously announced the retirement of Wm. E. Morris, Esq., from the presidency of the Company, and the election in his stead of Mr. Coffin Colket, of Philadelphia, where most of the stock of the company is owned, and where the annual meetings of the stockholders is held. Mr. Wm. S. S. Russell continues as secretary and treasurer of the company. We presume that the duties of president (and superintendent, which Mr. Morris also performed) will be very light under the contract system which has been adopted.

Mr. Morris assumed the control of this road in 1853, when the company was deeply involved, with a prospect of foreclosure of the mortgage resting upon the road, and undertook the almost hopeless task of rescuing the concern from its load of debt and unpopularity into which it had fallen. By rigid economy, and a thorough knowledge of railroading, he has succeeded in securing to it a fair share of popularity with the people, and has placed it among the best conducted roads in the state.

There are many other roads in the land where the energy and financial ability here displayed by Mr. M. could be employed with equal advantage, and should he seek other and more extensive fields for the development of these, we bespeak for him a kindly reception.

St. Paul and Pacific Railroad.

This is the name of the projected and partly executed Minnesota and Pacific Railroad. An act to rest the rights of the latter in the St. Paul and Pacific Railroad Company was passed by the Legislature of Minnesota, March last. By virtue of this the new corporation acquired the land grant of six sections per mile donated to the State by Congress in 1857. The corporators and directors for the present year are Messrs. Dwight, Woodbury, Henry T. Welles, R. R. Nelson, Edmund Rice, Edwin A. C. Hatch, James E. Thompson, Leander Garton, Richard Chute and William Lee.

By section 5 of the present act they are required to put into operation, by the 1st of September next, that portion of the road extending from St. Paul to St. Anthony. The section between St. Anthony and Anoka is to be completed by the beginning of 1864; and that between Anoka and St. Cloud by the first of January, 1865. Sections between Stillwater and St. Paul, and between St. Anthony and the west line of range 30, by way of Minneapolis, must be opened by the beginning of 1866, as also the extension to Little Falls. Thenceforward 30 miles of the main road or the branch must be opened every year, and all of said road or branch before the 3d day of March, 1867.

It is provided that the company shall deposit with the State authorities the sum of $10,000 as a pledge that the road shall be in running order from St. Anthony to Anoka by the time specified; the same to be returned if the conditions are complied with, otherwise to be forfeited. The Board of Directors shall consist of seven persons, four of them at least being citizens of this country. In case the road is not completed from St. Paul to St. Anthony by the 1st of January next, the work with all the rights, privileges and property, confirmed upon the company, shall be forfeited to the State. The some rule shall apply with respect to the various extensions named above and the lands lying thereon.

Section 6 provides that 120 sections of land shall vest in the company, whenever the road shall be completed from St. Paul to St. Anthony. For every additional twenty miles opened the same quantity of lands shall be donated, until the whole shall be granted. The line is to extend from Stillwater *via* St. Paul and St. Anthony, to a point between the foot of Big Stone Lake and the mouth of the Big Sioux Wood river, with a branch *via* St. Cloud and Crow Wing to the navigable waters of the Red River of the North.

By section 8th it is provided that persons who may have settled on the lands of the company, with intention to pre empt, shall be at liberty to purchase them at $2 50 per acre within six miles of the road, and $1 25 per acre beyond that distance.

No lien or mortgage can be created on the road or other property, except for the *bona fide* purposes of construction. The company are prohibited from charging higher rates for freight or passengers delivered by connecting roads than are charged from persons, residing along its own line, provided the connecting lines shall be governed by the same rule. No execution issued against the old company shall be held valid against the present.

Cleveland and Pittsburg Railroad.

An official statement from the Receiver of the Cleveland and Pittsburg Railroad Company, in another column, says that all the accrued interest on the three old mortgages has been provided for from the earnings of the road, and the next interest to be paid is on the funded debt bonds (given in exchange for the unsecured indebtedness) on the first day of July, 1869. The holders of the River Line bonds, Dividend bonds, Income bonds and Bills Payable, who have not yet accepted the terms of compromise offered them with the approval of the United States Court, are notified to exchange their bonds and notes before the 25th of June, 1862, or they will not be entitled to receive any portion of the earnings of the road. Interest will be paid only to those who accept the compromise.

The new bonds, which are known in the market as fourth mortgages, and are selling at 64 to 65, may be had in exchange for any unsecured indebtedness, at the office, 25 William street. This outstanding floating debt amounts to about three or four hundred thousand dollars, against over three millions eighteen months ago; when this is funded into new bonds the bond account of the year will stand as follows:

First mortgage	$800,000	7 per cent...	$56,000
Second mortgage .	1,189,000	do. ..	83,230
Third mortgage...	1,166,000	do. ..	81,620
Fourth mortgage..	1,200,000	6 do. ..	72,000
Total interest per annum			$292,850

The gross earnings of the fiscal year ending December 1st, 1861, were $1,100,000. The earnings since December 1st show an increase on the same period last year of more than $100,000.

Atlantic and Great Western Railway.

The people of Ohio, Pennsylvania, and Western New York will be pleased to learn that the obstacles which have stood in the way of the prosecution of this enterprize, have been removed, and that the work is to be now carried forward with vigor to completion, and that the contractors are prepared to build it as rapidly as labor can be accumulated for that purpose. Arrangements have been made to put at once 6,000 men at work upon the track, and the Chief Engineer, Mr. T. W. Kennard, of London, has purchased during the past few weeks all the rolling stock needed for working the road, including 30 locomotives. The road at present is completed and in operation, from Salamanca, the junction with the Erie road, 46 miles from Dunkirk, to Corry on the Philadelphia and Erie Railroad. It there reaches the oil regions, and the freight on oil alone, brought 25 miles to the depot in wagons, is now $5,700 per week. When the branch is completed from Corry to Titusville, the depot of the oil region, this amount, it is believed, will be increased to $15,000 per week. The road will reach Meadville, Pa., by the 1st of July, and Akron, Ohio, by the 1st of October, making 200 miles from its junction with the Erie Railway. For the line to Akron the money and materials have all been provided. Beyond this, the road will be extended to Dayton, Ohio; and from Dayton to Cincinnati an arrangement has been made with the Dayton and Cincinnati Railroad Company to lay a third rail. At Cincinnati, it will connect with the Ohio and Mississippi Railroad, which is also of six feet gauge. Thus, when the whole line is finished, which will probably be within two years, New York will possess a new six feet gauge connection by rail direct with St. Louis, by which the products of the West, loaded at St. Louis, can be transported without breaking bulk to the Long Dock at Hoboken, and discharged into vessels for shipment to Europe. At Warren or Ravenna a connection will be made with Cleveland, which will tap the Western traffic at that point, and all along the line ateral feeders are already built, which will swell the business of the Atlantic and Great Western. The principal parties in this enterprise are the Duke de Rianzares, and the banker Salamanca of Madrid; Messrs. Hayward, Kennards & Co., of London; Mr. James McHenry, of Liverpool; Sir Morton Peto, M. P., and Mr. Edward Betts, of London, and Messrs. Samuel Hallett & Co., of New York. The Chief Engineer of the work is T. W. Kennard, Esq., of London.

Camden and Atlantic Railroad.

The Philadelphia *Inquirer* of 8th inst., says: "A spur of this road is now being surveyed, and will soon be completed from Jackson station to Atsion, about 10 miles distant. Atsion will be the terminus of the New Raritan and Delaware Bay Railroad, which already is in running order from Port Monmouth to a point six miles below Manchester, and will, it is said, be finished in July, though probably not before September. Jackson station is four miles east of Waterford, on the Camden and Atlantic Railroad, and on the completion of the new spur a direct communication will be afforded to New York by means of Port Monmouth, and from thence by boat."

Franklin and Jamestown Railroad.

An act has passed both branches of the Pennsylvania Legislature incorporating the Franklin and Jamestown Railroad Company. The Franklin *Spectator* says: "If there is anything we need in this section of the State, more than anything else, it is a railroad from this point to the main line of travel. During the last year, our oil men have paid for freight a sum sufficient to build a road more than half way from Franklin to Jamestown."

Jamestown is on the Pittsburg and Erie Railroad, in the north-west corner of Mercer county, Franklin is on the Allegheny river, at the mouth of French creek, in Venango county. The distance from Franklin to Jamestown is about 30 miles. If this road be built, says the Philadelphia *Register*, there will also be built a road from Franklin eastward. From the Philadelphia and Erie Railroad at Ridgeway, to Oil creek, and probably beyond, there will undoubtedly be constructed a railroad for the oil trade, etc.; and perhaps from Franklin a road will be built to Kittanning, whence there is a road now in operation to Pittsburg.

Portable and Stationary Engines.

Messrs. TODD & RAFFERTY, it will be seen from their Advertisement, are prepared to furnish, at the shortest notice, stationary and portable engines of any pattern or power. At their office, No. 13 Dey street, a large stock of these may be seen at any time; and at various railroad stations, in all sections of the country, their engines have been introduced, during the past five years, with the fullest satisfaction. Their works are at Paterson, New Jersey. As the manufacturers of flax and hemp machinery, Messrs. Todd & Rafferty have acquired a European as well as an American reputation, having filled large orders for many years for parties in Great Britain and Russia. Their portable engines are found to possess peculiar advantages about railroad depots, being literally capable of every service between picking up a pin and rending an oak. We can cordially recommend them to the attention of railroad managers.

New Castle and Beaver Valley Railroad.

At a meeting of this company held in New Castle, Pa., on the 26th ult., Mr. Crawford, president of the company, stated that $84,550 stock had been taken, which is only $5,440 less than the required amount. A number of gentlemen pledged themselves to procure the amount of subscription necessary to warrant the directors in proceeding with the work. A motion was made that the directors be instructed to proceed to let the contracts for building the road, on the faith of the people of the county, pledging that they would take the balance of the stock. The resolution was unanimously adopted.

Railroad from Millville to Cape Island.

We understand that a contract has been entered into for the construction of a railroad from Millville to Cape Island. The West Jersey Railroad Company takes $100,000 of the stock, and the Glassboro' and Millville Railroad Company, $100,000. The road is to be completed by the 1st of June, 1863, for $400,000, including equipment, one-half the amount to be taken in stock. This is an important road, opening, as it were, a new section of country. The distance from Millville to Cape Island is 39 miles, or 77 miles from Camden to Cape Island.

Liverpool Dock Statistics.

From statistics laid before the Mersey Dock Board, it appears that from the year 1858 to the commencement of 1862, there has been expended in wages at the Liverpool docks the sum of £144,837, and on contracts the sum of £148.426. At Birkenhead docks the wages paid during the same period have been £340,371, and the amount paid on contracts £371,053. At Birkenhead the expenditure on new works has been £1,248,268. From the same return it appears that the total receipts from tonnage, duties on merchandise, &c., at the Birkenhead dock during this period has been £44,078, and that after deducting the working expenses, and expenditure on general repairs, there has been an excess of receipts over expenditure of £14,180. Including the warehouses, the total excess over expenditure at Birkenhead during this period had been £27,414.

Easton and Iron Hill Railroad.

A bill was passed by the Legislature of Pennsylvania, at its last session, incorporating a company to build a road from Easton to Iron Hill, to be called the Easton and Iron Hill Railroad Company. It authorizes the construction of a railroad from the borough of Easton, along the north bank of the Lehigh river, to Freemansburg, thence across the said river at Shimersville and Iron Hill, with the right to connect with any railroad, and with the right at any future time to construct a railroad from Easton, along the Delaware river to Marshfield, and then connect with the Delaware, Lackawanna and Western Railroad. The company to be organized under this act shall also have the right to accept an assignment from the Lehigh and Delaware Water Gap Railroad Company, of the lease to them by the North Pennsylvania Railroad Company of the road from Iron Hill to Shimersville, and to use and adopt said brauch as part of their road. Should this be made, it will give the North Pennsylvania Railroad direct communication with Easton.

Eastern Virginia and Maryland Railroad.

The bill which recently passed the Western Virginia Legislature, at Wheeling, to incorporate the Accomac and Northampton Air Line Railroad Company, provides for a capital of $600,000, divided into shares of $50 each. The road is to commence at Cherry Stone Ferry, in Northampton county, Va., and to run to the Maryland State line in the direction of Salisbury, Somerset county. The Snow Hill, Md., *Shield* says: "The Hon. John W. Crisfield, President of the Eastern Shore Railroad Company, is much in favor of a plan contemplating a junction of the Virginia Railroad via Worcester and Somerset counties with that at Salisbury; as also other individuals of influence connected with this species of improvement."

New Castle and Frenchtown Railroad.

At a meeting of the stockholders of this company held at New Castle, Del., on the 8th inst., the following gentlemen were elected directors:—S. M. Felton, Moncure Robinson, Geo. A. Parker, E. C. Dale, R. J. Mercer, Isaac Hazlehurst, A. C. Gray, Joseph Rogers, Jas. Cooper, A. C. Nowland, Mahlon Betts, Thos. Kelso, J. J. Cohen, Jr., and Enoch Pratt. At a subsequent meeting of the board, A. C. Gray was re-elected President, S. M. Cowper, Secretary and Treasurer, and Alfred Horner, Assistant Treasurer.

Chicago and Northwestern Railroad.

This company have made arrangements to complete their line to Green Bay at once, and the means are provided by the sale of 7 per cent. bonds secured by mortgage on that section of the road. The iron is already on the ground, and the road will be completed in August, in time for the autumn business. This extension of the line secures to the road the command of three important Lake ports, viz.: Chicago, Milwaukee and Green Bay, and will, beyond question, add largely to its business. The regular interest payment on the first mortgage bonds, it is now believed, will be fully assured, and the second mortgage has a very much better prospect. After paying interest on the Sinking Fund and Appleton extension, the road earned within $20,000 of the interest on the first mortgage during the year ending April 1.

Interest and Dividends.

The Grand Street and Newtown Railroad has declared a dividend of 3 per cent. payable the 15th instant.

The Pacific Mail Steamship Company have declared a dividend of 5 per cent. out of the net earnings of the last three months, payable on the 23d inst. The books will close on the 15th and reopen on the 26th inst.

The National Finances.

The progress of events has now fully confirmed the views we have so long enforced, of the strength of the loyal States and of government, and has completely solved the financial difficulties of the latter. The market value of its securities is not only far above their par value, but is considerably higher than the premium paid for gold. All the money the government wants is proffered to it at from four to five per cent; and so abundant is capital, that it will undoubtedy soon be able to make long loans at four and a half per cent. In exchange for its demand notes, gold may, and probably will continue to advance, but not in the same ratio as its interest paying securities, which it will find no difficulty in exchanging for the former, with a larger premium in its favor.

The result will be accepted as extraordinary, and is a most gratifying testimony to the financial strength of the country; but still more so as expressing the progress of our people in political experience, and as the measure of confidence resulting therefrom. At the close of the last administration, government was glad to pay twelve per cent. for money, which was advanced rather from a patriotic motive, or sense of duty, which capitalists owed to themselves quite as much as to government, to preserve unshaken, as far as possible, confidence in the National faith, than as an investment. As late as July last, with the most strenuous efforts of the government officers in this city, the money necessary to meet its maturing obligations, then only small in amount, was raised only just in season to save a protest. Its six per cents had fallen from 124 to 83. The right of one or more of the States to break up the government was asserted, and it was not long before eleven of them combined for this purpose. The success of the attempt, it was felt, would be fatal to all government, and leave no prospect for the future but anarchy, which is more to be dreaded than the worst form of despotism. Our people were called upon to fight, not only as a defense against threatened invasion, but to save themselves from material as well as political annihilation. With preparation for the contest came courage, and confidence. The means of government in-

creased just in the degree that it showed itself earnest and resolute. All that was wanting was a purpose. From the darkest day, that of the defeat at Bull Run, which at a flash disclosed the magnitude of the contest in which we were engaged, public confidence has been daily growing stronger and stronger. The ability of government to borrow has steadily increased, till it is now easier for it to borrow $50,000,000 in gold than it was two years ago to borrow $10,000,000. All feel that experience has cleared away the doubt and uncertainty in which the powers and functions of government were involved. We had nominally a government, but one without powers, even to defend its own property. The most threatening attitude might be assumed by insurgents, but the Executive could not raise its finger either by wars of punishment or restraint. A spell rested upon it. It had so long pampered the elements of insubordination, that the most perfect immunity had been secured to the individual. No wonder it had come to be an object of distrust by other nations as well as ourselves. For a long time we stood stupidly gazing at the meteor of secession, when the attack upon Fort Sumter, like a thunderbolt, brought the nation to consciousness, dissolved the spell, and from that moment it entered upon the path that has conducted it to the result we now witness—suppression of the rebellion, financial ease, and complete restoration of the national credit; and above all a nationality, and a government, with functions and powers commensurate with its duties and objects. The future is no longer involved in doubt. We have the strongest of all governments, because it is most nearly allied to the sympathies, habits and understanding of the people.

As the material welfare of the country depended upon its political unity, we could in no way promote the former so efficiently as by sustaining the latter. The one is the measure of the other. As the people in the loyal States were never before half so thoroughly united, they were never before so strong. They never enjoyed a greater degree of material comfort. Food and clothing were never more abundant, or more easily obtained by all classes. This fact, coupled with money abundant at the lowest rates of interest that ever prevailed, is the most conclusive proof that can be adduced of a sound and healthy financial condition. The end of all governments, in their economic aspects or objects, is an abundance to eat and to wear. No prosperity is specious or superficial when such abundance exists. We may, we think, safely challenge history for a similar example of a people, who in the midst of a gigantic civil war, grew rich and strong; who restored their national credit as hostilities progressed, and who conducted them to a successful termination, without abating a jot from the comforts and luxuries ordinarily enjoyed.

We have already discussed the sources or elements of our strength. These are to be found in the natural wealth in our soil; in the maintenance, undisturbed, of our industries; in our unrivalled means of internal commerce, and in the universal prevalence of labor. We have no classes consecrated from wealth, calling, or rank, to indolence. The income arising from lands, or from permanent investments, do not go to parties entirely disconnected, except by ownership, from the soil. The consequence is that, although we spend freely, and often lavishly, the practise of rigid economy for a year or two, and to which we can bring ourselves as no other people can, compensates for great losses, and soon makes us rich even with a great reduction from our ordinary revenues.

The abundant supply of capital, and the present low rates for money, can be explained in an equally simple and satisfactory manner. The North, fortunately, before the rebellion broke out, had put in operation all the machinery necessary for the development of its resources, and the utilization of its strength. There was not a producer within the vast extent of the wide domain loyal to government, that did not, either by railroad or canal, possess a cheap and convenient outlet to market. The construction of new works, with the annual expenditures upon those opened, had, within the last ten years absorbed more than $100,000,000 annually. For many years the investment was comparatively unproductive. The greater portion of it is now yielding a fair income to the owners, while the increased value it has given to the property of the country, from the commercial facilities afforded, exceed many times the whole expenditure. The annual drain for public works has almost entirely ceased. There are in fact, no new enterprises presented to public attention. Money is becoming cheap because there is no demand in channels where it was once most actively employed. But the amount expended on railroads, while these were in progress was not by any means equal to that required to transfer 400,000 people annually from the Eastern States to the Western, to place them in a position of comfort,—to make the improvements required in their new condition, and to construct the cities that have risen as if by magic from their plains. The people of the Eastern States have, within the last ten years sent more money into the State of Illinois for the purchase of lands, for the erection of buildings, and for improvements of one kind or another than for its railroads. It has cost a larger sum to build the city of Chicago, which has added 120,000 to its population within the past ten years, than that invested in the system of public works for the whole State. Such expenditures are now measurably discontinued, abating in an equal degree the customary employment of capital.

A reason why there has been so little private and personal distress growing out of the rebellion, is owing to a fortunate sub-division of the various industries of the country. None is so disproportionate or overshadowing as not to be readily absorbed by the others in case disaster overtakes it. Massachusetts is the great seat of cotton manufactures in the country, yet every mill in the State might be closed without throwing, perhaps, a single person now employed in them, upon public charity. As fast as the hands are discharged they find employment and support in other branches of industry. To all, agriculture is a never failing resource. We hope to see this harmony of interests always preserved. Were England equally fortunate, she would escape the terrible problem now presented in the condition of millions, who, when employment in the cotton mills fails, must starve, or be relieved at public expense.

We have extended these remarks to some length, but we believe them to be an appropriate commentary upon the triumphant solution of all the financial difficulties by which government has been surrounded. This has worked its way to a position of complete independence in the face of the most appalling difficulies, which foreigners confidently pronounced to be insurmountable. The result has no precedent in history. We have ourselves labored earnestly to produce it; and having seen the complete fulfilment not only of our wishes but our predictions, we shall be at liberty, in the future to turn our attention to other themes, which have been neglected in the more pressing one of the public welfare. —*Hallett's Financial Circular.*

OFFICE OF THE ILLINOIS CENTRAL R. R. Co., New York, May 8, 1862.

THE ANNUAL MEETING OF THE SHAREholders of the Illinois Central Railroad Company, for the election of Directors and the transaction of any other business, will be held at the office of the Company, in the City of Chicago, on WEDNESDAY, May 28, 1862, at 10½ o'clock A. M. The transfer books will be closed on the 20th of May, and re-opened on the 2d of June.

2t20 W. M. PHILLIPS, Secretary.

THE RECEIVER OF THE CLEVELAND AND PITTSBURG RAILROAD COMPANY gives notice that the assets of the Company are in his hands, subject to the direction of the United States Court for the Northern District of Ohio; that by the order of the Court no portion of the earnings of the road can be applied to the payment of any of the unsecured indebtedness of the Company. All the earnings, after paying operating expenses, rent and mortgage interest, will be applied to the principal of those debts, which are due and secured, amounting at the present time to about a million of dollars.

The accrued interest on the three old mortgages has all been provided for from the earnings of the road, and the next interest to be paid is on the funded debt mortgage bonds (given in exchange for the unsecured indebtedness) on the 1st day of July, 1862. The holders of the River Line Bonds, Income Bonds, Dividend Bonds and Bills Payable, who have not yet accepted the terms of compromise offered them with the approval of the United States Court are notified to exchange their bonds and notes before the 25th day of June, 1862, or they will not be entitled to receive any portion of the earnings of the road. Interest will be paid only to those who accept the compromise.

The new bonds can be obtained in exchange for any unsecured indebtednesz at the office of the Company in Cleveland, or at No. 25 William st., New York City, of H. C. KINGSLEY.

1m20 J. N. McCULLOUGH, Receiver.

UNION COAL & OIL CO.,

MAYSVILLE, KY.

BRANCH OFFICE { No. 126 Maiden Lane, NEW YORK.

ROOFING

This Roofing can be applied to new and old Roofs of all kinds. It is FIRE and WATER PROOF.

Gutta Percha Cement applied to Tin and other Metal Roofs will render them perfectly and permanently water-tight.

JOHNS & CROSLEY,
Sole Manufacturers
WHOLESALE WAREHOUSE:
78 William st., cor. Liberty, New York.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

12.	" 18 "		1 to 1	24.	" 32 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

American Railroad Journal.

New York, Saturday, May 24, 1862.

Pittsburg, Fort Wayne and Chicago R. R.

Below we give a brief history of the re-organization of the Pittsburg, Fort Wayne and Chicago Railroad Company, prepared by a gentleman entirely familiar with the same. The completion of the re-organization is the consummation of a work which has occupied, and we may say absorbed, the attention and best efforts of several public spirited gentlemen for nearly two years, during which time, amid almost innumerable difficulties, and every kind of annoyance and obstacle, they have steadily pursued their object of extricating one of the noblest enterprises on this continent from almost hopeless embarrassment, of saving a vast property to its helpless owners, and of placing it upon firm and independent ground. This work is now very nearly completed, the only thing wanting are the deliveries, which are now being rapidly made, of the evidences of title to various parties in interest. The enterprise, undertaken without adequate means, and originally in several detached parts, soon fell into pecuniary difficulties, for which various expedients were resorted to, all of which failed to give relief, till the sale of the property under the first mortgage, and the sacrifice of all other interests, seemed inevitable. The first mortgage bonds shared in the excessive depreciation which followed, and to such an extent, that only about 6 months ago, these were selling at about 65 per cent. of their par value, with 31⅓ per cent. accrued interest—bonds which, without interest, are now in demand at 95! Within this short period the market value of the securities of this company has more than doubled. This increase in value has been due entirely to the progress and completion of the work of re-organization, and is full proof of the value of the services of the gentlemen who had this work in hand. It is certain that without the most entire confidence which they commanded, both for integrity and ability, and without the influence which, from their high character, they were enabled to exert, success would have been impossible. There were every variety of interest to conciliate. The favorable action of the Legislature of four States had to be obtained. Judicial proceedings had to be had in each. The assent of owners of bonds to the amount of some $10,000,000 had to be procured, two-thirds of whom were in foreign countries. Means had to be raised for the completion of the line. The task, in fact, seemed insurmountable, as the prices to which the bonds fell, showed. But the Committee charged with the matter patiently proceeded, removed one obstacle and impediment after another, always finding some solution for them as they arose, till the final result is reached, which is, in every respect, a first class enterprise, capable of discharging every obligation ever resting upon it, and of realizing every expectation ever predicated of any portion of the line, or of the securities issued upon it. The re-organization is in fact a creation, to the holders of the securities, to an amount equalling nearly two-thirds their nominal value. To save such property was a most agreeable task, to say nothing of the skill and ability displayed. It has given to thousands means competent for a comfortable support, who with the ruin of this enterprise would have been beggared. Such was undoubtedly the motive weighing most strongly with the Committee, who are entitled to the warmest thanks of all interested, particularly its Chairman, Mr. Lanier, whose services, from his standing and popularity in the West where the greater part of the work was to be done were invaluable.

The reorganization of the Pittsburg, Fort Wayne and Chicago Railroad Company has been consummated. This line, extending from Pittsburg to Chicago, a distance of 469 miles, consisted originally of three separate and distinct corporations, viz: the Ohio and Pennsylvania, Ohio and Indiana, and Fort Wayne and Chicago, each of these corporations having created large mortgage debts while thus distinct. In the year 1856 they were, by vote of the shareholders, consolidated into one, under the name of the Pittsburg, Fort Wayne and Chicago Railroad Company, legal authority so to do having first been obtained from the several States through which the line passes. The consolidated company also made a mortgage debt subject to the prior mortgages on the sections.

Soon after the consolidation, the road became greatly embarrassed by the debts contracted in the completion of the line, unable to pay its interest, and to keep the line in repair. On application of the mortgage creditors, to save it from destruction, the whole concern was put into the hands of a receiver who operated the same for nearly two years, applying the net revenues to its improvement.

In the Fall of 1859 the mortgage creditors, at a meeting held in New York for that purpose, appointed J. F. D. Lanier, Samuel J. Tilden, and L. H. Meyer, of New York, J. Edgar Thomson of Philadelphia, and Samuel Hanna of Indiana, their agents, to protect their interests, with full powers to act according to their own judgment in the premises. After a long delay decrees of foreclosures were had under the mortgages in the United States Courts in each of the States through which the road passes, under and by virtue of these decrees, the entire road, with all its machinery, cars, stations, and all things thereto appertaining, were sold on the 24th Oct., 1861. The above named gentlemen became the purchasers, taking possession on the 1st Nov. following. Prior to the sale a plan for the reconstruction or re-organization of the road was agreed to by nearly all parties in interest.

In virtue of powers given by recent laws passed for that end by the States of Pennsylvania, Ohio, Indiana and Illinois, a new corporation was formed in February last, under the name of the Pittsburg, Fort Wayne and Chicago Railway Company. A Board of Directors was then chosen, consisting of 13 persons, by a vote of the bondholders (they only being entitled to vote at the first election) hereafter they vote in common with the shareholders, ten votes for each bond of $1,000. Experienced and competent men were elected having a large pecuniary interest in the road. To this new corporation the purchasers above named conveyed the entire line and all things pertaining thereto by proper deed, and put them in possession thereof on the 1st of May, the Committee having operated the road just six months, Mr. Lanier as Chairman of the Committee acting as President.

The new corporation having first executed and delivered to the committee their first mortgage

bonds to the amount of $5,250,000, secured by a first trust or mortgage on the entire road, and all the property of the company to be by the committee given over in payment thereof to the holders of first mortgage bonds on the three sections of road as named above, arrears of interest to be added to the principal, according to the plan of reorganization. Also, their bonds to the amount of $5,100,000, secured by a second trust on all the property of the company, subject to the first, to be by the committee given in payment to holders of second mortgage bonds on the three sections of road as above named, and of consolidated or construction bonds as set forth in the contract of reorganization. The above-named bonds bear 7 per cent interest, with half-yearly coupons, payable fifty years after date, but redeemable at any time at the option of the company, after the expiration of ten years.

They also delivered to the committee their bonds to the amount of $2,000,000, called income or third mortgage bonds, to be by the committee given to certain classes of creditors under the plan of reorganization, they being, in fact, nothing more than preferred stock, as the interest is payable contingently as may be declared by the board of directors, after the interest on the mortgage debt is paid, and the road put and kept in complete order. Holders of shares in the old company are to be reinstated by the new, and put in the same position they held before as to the stock. Great care has been taken by the committee to protect and surround the several mortgages or trusts with all the legal guards and sanctions that able and experienced counsel can devise, and in this respect they think they have been most fortunate, providing for all contingencies that may arise.

The interest on the first and second mortgage debt is divided into six equal series, payable monthly—January 1 and July 1, February 1 and August 1, and so on—interest account being equalized by the payment of fractions in cash by the committee when the new bonds are delivered. The mortgage creditors may rest assured their interest will be promptly met according to contract. The sum of $61,000 per month of the earnings since the 1st of January last has been set aside and placed in the hands of the company's agents in New York, Messrs. Winslow, Lanier & Co. for that purpose. An irrevocable order has been made by the board of directors for its continuance. It is the purpose of the board of directors to appropriate the net earnings, after the payment of interest on the debt, to the gradual and economical improvement of the road and increase of motive power until it is made equal to the best roads in the country. After this is done, they will commence declaring dividends on the third mortgages. Soon after, the long-deferred shareholders will begin to realize dividends on their stock.

To bring about this result has been the labor of over 2½ years on the part of the committee, occupying the undivided time and attention of a portion of them; their efforts have proved completely successful, and have given to all classes of creditors and to the shareholders and persons interested in the line an exampled degree of satisfaction. The increase in the market value of the debt and stock since the agreement was entered into is over five millions of dollars.

The new organization starts under the most favorable circumstances, free of floating debt, in fine credit, in the receipt of near three and a half millions of dollars per year in gross, with every prospect of large increase, the mortgage debt a little over one-half the cost of the road. The line is one of great promise for the future, being the nearest, best, and most direct route from New York, Philadelphia, and Baltimore to Chicago, traversing a country of great fertility, as yet but partially developed, being almost a straight line for four-fifths of the way, with easy grades, occupying a central and commanding position.

☞ The Chicago, Burlington and Quincy stockholders have voted to extend their road from Aurora into Chicago.

Philadelphia and Reading Railroad.

The gross receipts of this company from the transportation of passengers, freight, coal, etc., for the fiscal year ending Nov. 30, 1861, were:

From 368,651, equal to 140,451 through passengers		$338,904 69
From 324,958 tons merchandize		406,321 22

Interest on bonds and mortgages	35,532 00	
	$740,366 00	
Renewal fund	210,799 84	
		951,165 84
Dividend fund for the year		$672,539 46
Disposed of as follows:		
Sinking funds	$150,000 00	
State tax on capital	15,928 25	
Dividend on preferred stock, 7 per cent. on $1,551,800	108,626 00	
Accrued interest for 1861, on reserved dividends preferred stock	24,065 43	
		298,619 68
Balance of dividend fund 1861		$373,919 78
Add balance reserved fund, 1860		406,822 62
Total reserved fund		$780,742 40

The increase in passenger travel has been equal to 10,473 through passengers, chiefly from the transportation of soldiers. The increase in receipts therefrom is $5,546. The number of tons of merchandise transported is 174,769 less than in 1860; and the decrease in receipts therefrom $193,299. The coal tonnage shows a falling off of 238,621 tons, with a diminution in receipts of $217,185. The total falling off in gross earnings was $406,708; and in net profit, $213,709.

The amount to credit of reserved fund Nov. 30, 1860, was $425,904 86, out of which have been paid sundry drawbacks on traffic for that year, $19,082 24—leaving the balance as above $406,822 62. The total reserved fund now stands at $780,742 40.

After deducting all expenses, including renewal fund, and interest on the bonds, the net profits are $672,539 46, which is equal to 5.82 per cent. on all the outstanding stock, common and preferred, or to 7 per cent. on the preferred, and 5.64 per cent. on the common stock. A dividend of 7 per cent. on the preferred stock was declared and paid on the 15th of January. For the arrears of dividends due upon the preferred stock, scrip was issued payable December 31, 1862, amounting to $372,432, with accrued interest. No bills payable have been issued during the past year, the company confining its transactions to cash payments. The net income has been applied to the redemption of its debt, and strengthening its position. Some further payments of this character remain to be made, before a return to cash dividends on the common stock can be determined on with any assurance of safety and permanence.

The following is an abstract from the General Account of the Company, November 30, 1861:

Capital stock, common			$9,997,129 51
" preferred			1,551,800 00

			$25,225,483 62

The following is a statement of assets and liabilities December 1, 1862:

ASSETS.

Cash	$305,527 19
Bills receivable	54,522 09
Freight and tolls, bills receivable in December, 1861	184,852 91
	$544,902 19
Less wages, material bills, drawbacks, and connecting roads	104,794 75
	$440,107 44
Stocks and bonds held by the Co.	422,624 31
Materials on hand, current business of the road, and payments made on account 1862	355,222 99
Debts due the company	464,854 11
	$1,682,808 85

LIABILITIES.

Debts due by the company	$87,789 39
Coupons to Jan. 1, 1862, inclusive	312,403 00
Interest on real estate bonds	13,284 58
Sinking funds	507,261 63
Deferred dividends to preferred stock holders, with accrued interest to Jan. 1, 1862	425,156 07
Dividend on preferred stock for year 1861	108,626 00
Cr: Balance of renewal fund	129,193 98
Assets over liabilities	99,094 20
	$1,682,808 85

The equipment of the road consists of 145 locomotives, of which 124 are first class, 14 second class, 4 third class and 3 fourth class; 45 passenger, 13 baggage and 7 mail and express cars, all 8-wheel; 8 iron and 837 wooden 8-wheel coal cars, 2,944 iron and 1,824 wooden 4-wheel coal cars—making a total of 5,608; of the 1,065 cars for freight and general use, 493 are 8-wheel and 572 4-wheel. In addition to the above, the Company own 5 small passenger cars, 12 stationary engines, from 4 to 60 horse power, for driving machinery; 13 steam and water power engines, for pumping at water stations, sawing wood, etc.; 8 snow ploughs; 1 dredging machine; 27 carts, wagons, drays, etc.; and 59 horses for hauling in Philadelphia, Richmond, and elsewhere. The rolling stock of the road has been increased during the year, by the addition of 200 new 8-wheel wooden coal cars for Broad Top bituminous coal trade, 1 new iron 8-wheel coal car, 6 8-wheel and 6 4-wheel open cars from lateral roads, and 1 new 8-wheel baggage car. Eleven first class engines have been completely re-built during the year, together with 69 freight cars of various descriptions—their whole cost having been charged in transportation expenses.

The expenses of the transportation department have been $107,502 04 less than those of the preceding year. This reduction has been mainly caused by the decreased amount of coal and merchandise transported. The lower prices of materials, the adoption of cash payments for same, and the substitution of improved coal burning locomotives for those hitherto using wood fuel, have also contributed to this result.

Coal has been carried at a lower cost than ever before attained on this road. The improved condition of the cars, engines and track, allowing heavier loads to be hauled over the main line during the past year, than in any previous one.

The extra passenger train between Port Clinton and Reading, for the Cattawissa Railroad through passengers commenced running April 23, 1861.

The business of the Lebanon Valley branch exhibits a decided increase, with a proportionate decrease of expenses. Its revenue the past year amounted to $403,019 62, and its expenses to $139,628 61—leaving a net income of $263,391 01, exclusive of its own rails. The additional receipts on the main line of the Reading Railroad, from that portion of this business which passed over the latter, were $239,962 32.

The transportation of live stock, chiefly for the New York market, via Allentown and Easton, has reached the large amount of 35,411 tons, yielding a revenue of $40,835 10—an increase of 264 per cent. over last year.

The number of miles run by engines over the main line in transportation department the past year was 1,215,382; in roadway department, 48,537; in renewal department, 14,412—total Reading Railroad, 1,278,331; total Lebanon Valley Railroad, 253,969; total Chester Valley Railroad, 33,431; on lateral roads in coal region, 130,196—total, 1,695,927. Miles run in 1860, 1,852,485—decrease, 156,558.

The total tonnage of the road, including coal, merchandize and materials, was 2,348,906. The total number of tons hauled one mile, exclusive of engine and tender was 421,599,695. The average weight of loaded coal trains down, do., 753.9; do., empty coal trains up, do., 266; do., passenger trains do., 59.2—all tons of 2,000 lbs.

The total number of miles run by all engines owned and used by the company from May, 1838, to November 30, 1861, was 26,459,504. Total number of tons hauled one mile between same dates 6,338,414,009. The total amount of coal transported from commencement to date of the report, was 27,383,421 tons of 2,240 lbs. The total tonnage of the road, of 2,000 lbs., was 86,997,199.

The total number of passengers carried during the year was 368,651; number carried one mile, 12,922,123—equal to 140,451 through passengers carried over the whole road. The total number of passengers carried to date of the Report, including Philadelphia Branch road, 4,426,875.

The Philadelphia Branch road, between Philadelphia and Schuylkill Viaduct, is three miles long. The tonnage was 4,979; number of passengers, 10,084; total receipts $2,378 03.

The excess in the expenditures of the roadway department over those of the previous year, in the items of roads, bridges and police, is accounted for by the lease of the Schuylkill Valley and Mill Creek railroads, comprising 48.79 miles of additional track, the repairs of which for four months of the year, has cost $8,068 57, including the wear of rails, and the expenditure of $958 51 for the construction of a branch road to the new coal breaker at Fisk's Mines. The expenses of this department have also been increased $3,366 24, by the transfer to it of sundry policemen from the transportation department. The extent of railway in charge of this department Nov. 30, 1861, was as follows:

	Miles of main track.	Miles of sidings.	Total miles.
Philadelphia & Reading	198.00	56.82	254.82
Willow street	3.50	0.54	4.04
Mt. Carbon & Pt. Carbon	5.00	6.41	11.41
Mount Carbon	1.00	1.94	2.94
Lebanon Valley	62.98	7.69	70.67
Chester Valley	21.50	1.80	23.30
Schuylkill Valley	14.23	18.94	33.17
Mill Creek	5.75	9.87	15.62
	311.96	104.01	415.97

Making due allowance for the four months' operation of the Schuylkill Valley and Mill Creek railroads, the cost of repairs per mile of track has been $342 79, against $673 56; and per ton of traffic, 10.49 cents against 8.05 cents in 1860. This latter comparison is made on an aggregate tonnage, which has not been increased by the acquisition of the control of the laterals; and the unexpected falling off in the coal trade from Schuylkill Co., in the last four months of the fiscal year was a collapse too sudden to be followed by a corresponding reduction in expenses.

In proportion to the tonnage there has been broken one car for every 26,099 tons carried. In 1860, the proportion was 1 to 34,814; and in 1859, 1 to 42,952. The average for the past 14 years has been 1 to 12,090.

The number of rails removed from the track in 1861 was 17,579, being 1 to every 133 tons moved; costing for renewal $85,957 75, or 3.65 cents per ton. In 1860, the number removed was 19,291, or 1 to 146 tons, costing for renewal $114,420 90, or 4.06 cents per ton. In 1859, the number removed was 16,337 or 1 to 147 tons, costing $103,334 65, or 4.29 cents per ton. The total tonnage of the road the past year, on main line and branches, including weight of passengers, in tons of 2,000 lbs., has been 2,348,906. The average tonnage for the past 14 years has been 2,244,485; the average number of bars removed, 14,113, or 1 bar to 228 tons moved; costing for renewal, $82,178 83, or 2.29 cents per ton.

At the annual meeting of the stockholders of the company, held Jan. 13, 1862, the following gentlemen were unanimously elected officers for 1862:

President—CHARLES E. SMITH.

Managers—Asa Whitney, S. M. Felton, H. Pratt McKean, Wm. Sellers, John H. Towne, A. E. Borie.

Treasurer—SAMUEL BRADFORD.

Secretary—W. H. MCILHENNY.

Pittsburg, Fort Wayne and Chicago R. R.

We are indebted to T. D. MESSLER, Esq., late Auditor, but now Comptroller under the new organization, for an advance copy of the Fifth Annual Report of the Pittsburg, Fort Wayne and Chicago Railroad Company. This property as our readers are aware, passed by judicial sale, October 24, 1861, to J. F. D. Lanier, Esq., and others, purchasers at said sale, who on the 1st of May inst., deeded it to the new organization—the "Pittsburg, Fort Wayne and Chicago Railway Company." This company are now in the possession and management of the same. We regret that the report did not reach us in season to give it the extended notice which it merits at our hands. We have only room for the report of the President, but shall endeavor to do full justice to that of the Auditor in our next.

REPORT OF THE PRESIDENT TO THE STOCKHOLDERS.

The operations of the road for the past year, as conducted under the directions of the Receiver, and the purchasers at the sale made under a decree of the United States Circuit Court in October last, are fully presented in the report of the Auditor, now published for your information.

Although this valuable property has passed from you by judicial process, yet this report is made, in view of the agreement entered into in October, 1860, looking to your becoming shareholders in the corporation, ultimately to own the property. This new corporation will be formed in a few days, and

within two months thereafter, it is hoped you will be shareholders in a company unembarrased by debt; and which will ultimately remunerate you for your advances in aid of building this important line of road.

It has required much time, and will involve quite a large expense, to finally consummate the re-organization; and but for opposing views of different classes of creditors, both time and money would have been saved. Where such large, varied, and to some extent complicated, interests were involved, entire harmony was hardly to be expected, however much to be desired.

It is not deemed necessary at the present time to do more than to refer to the full report of the Auditor, from which you can learn the details of the operations of the past year, and in which you will find the promise of favorable results in the future.

G. W. Cass, President.

Pittsburg, Feb. 20, 1862.

☞ The New York and New Haven Railroad Company have declared a semi annual dividend of three dollars per share, payable on the 20th inst.

North Missouria Railroad.

REPORT OF THE DIRECTORS TO THE STOCKHOLDERS.

For the Year ending April 1, 1862.

On the 1st of April, 1861, when the present Directors were placed in charge of the management of the North Missouri Railroad, the then Auditor submitted a statement showing the following floating indebtedness on the part the company:

Audited vouchers and pay rolls	$66,232 63
Bills payable	12,671 87
Due Schenectady Locomotive Works	3,141 50
Balance due City of St. Louis on amount of suit compromised	879 00
Due on cattle claims, about	5,000 00
Floating debt due by the Company, 1st April, 1861	$87,924 00

This sum did not embrace interest due by the company to the State of Missouri, or to the City and County of St. Louis, which the company had then and have still failed to pay from want of ability. The road was not completed to the Hannibal and St. Joseph Road when the available stock subscriptions were exhausted and it forfeited its right to receive further State aid; so that to equip it properly with rolling stock and to complete work requisite for its operation, the company has been compelled to use its surplus means, and consequently could not pay interest. There is a great deal of work yet to be done to make it a completed road to the junction, which the company propose to do as its means will enable it; among the most important of which is the making of an improvement at St. Charles, which will enable it to cross its freight cars at this point without unloading them.

The assets of the Company on the 1st of April, 1861, were reported by the Treasurer to consist of the following items:

Cash on hand	$ 4,883 61
Due by stockholders	169,888 79
Real estate	83,297 04
Bills receivable	4,974 41
Post Office department	8,890 22
Bank of Commerce	1,217 70
St. Charles Ferry Company	7 00
Due by individuals	1,079 59
Suspense account	100 93
	$274,341 29

From these assets the company realized during the year ending 1st April, 1862, as follows:

From stockholders	$ 697 00
" real estate	500 00
" bills receivable	2,532 81
" Post Office department	8,890 22
" St. Charles Ferry Company	7 00
" due by individuals	49 00
	$12,675 53

The heavy floating debt of $87,924 was mostly due to needy laborers and persons who had furnished supplies, who, fearing they would never be paid, gave great annoyance.

Shortly after taking charge of the road, the then Executive of the State, with the Board of Public Works, called upon its officers for a statement of its condition, with the view of advertising it for sale, remarking, at the same time, that similar statements were being obtained of the Pacific and S t. Louis and Iron Mountain roads for the same purpose. The rumored intention on the part of the State to sell the road tended to increase the general uneasiness of employees, and many left the service of the company because they felt, that, in justice to themselves and their families, they could no longer afford to work when there was so much doubt as to the ultimate payment. They knew that what was due them could not then be paid, and thought it probable it never would; and naturally concluded, that, if they continued to labor, the indebtedness of the company to them would be increased, and their ultimate loss become the greater. Many would leave the employment of the company, and then day after day besiege the offices of the President and Paymaster, with piteous tales of the distress and suffering of their families, in efforts to get their dues. It was our anxious desire to relieve them, and as fast as anything was earned it was paid out in small sums to those who were apparently most in need. The financial condition of the company was such that it was impossible to obtain any credit for oils or other materials required to operate the road, and we had to make purchases for cash, in small quantities, as the means of the company would permit.

In this condition of things it became necessary to reason with those in the employment of the company, and urge upon them to continue their labors, and thereby secure the only reasonable assurance that could be given, that they would ever be paid. To exercise proper control and enforce discipline under these circumstances was an impossibility. It is a gratification to us to be able to say, however, that in many instances the conduct of the employees was most commendable, and exhibited a proper interest in aiding us in our efforts to operate and sustain the road.

The financial difficulties that surrounded us at the time we took charge of the road were appalling enough, and were calculated to almost discourage us from any efforts to extricate the road from its embarrassments; but, added to these, our national troubles were daily assuming a more and more alarming aspect, and distrust, doubt and excitement pervaded all minds in consequence. Under these circumstances it is not easy to fully comprehend the difficulties of managing an embarrassed railroad, passing through a disloyal country.

Such was the state of public feeling along the line of the road, that at several points the United States Mail Agent was warned that his life would be in jeopardy if he attempted to discharge his duties. Every effort was made by the President of the company to allay the excitement and induce the people not to set at defiance the power of the Government. The press of St. Louis made appeals to them; and no outbreak of a very serious character occurred until after Governor Jackson fled from the city of St. Louis, and issued his proclamation for fifty thousand men, and ordered the railroads of the State to be destroyed.

The President of the company, fearing the evil consequences that might be produced by this proclamation, accompanied the train of cars on which it was carried to the people along the line of the road. He used every means in his power to arrest the excitement; urging the citizens to follow their peaceful vocations; exhorting them, above all things, not to create public disturbance, nor to destroy public property, and especially to let the railroad remain uninjured. He assured them that if they acted on the advice he gave them, no United States troops would be sent amongst them, and he felt warranted in giving this assurance from conversations he had held with United States army officers.

On his return to St. Louis he was confident his advice would be adopted, and so reported. At his instance, an editorial appeal was made to the people to keep the peace, and, in fact, no effort was spared on his part to save them from the horrors of civil war. All went unheeded, and a few wicked men, acting under instructions, as it afterward appeared, from Governor Jackson, broke the peace of this section of the State setting fire to Young's Creek, Sturgeon and other bridges and culverts. This damnable work was inaugurated under the leadership of a Capt. Absalom Hicks, Dr. Samuel A. Peters, and others; and to them, acting under orders from the Executive of the State, was this road indebted for the first injuries done to it, and the people for the first troops that came among them.

The moment the President learned that the destruction of the road had begun, he applied for military protection, and afforded all the facilities in his power for the transportation of the troops He was at the Arsenal every day seeking this protection, and Colonel Harding was anxious to afford it. General Lyon was absent, and Colonel Harding was acting in his stead. Troops were then needed, for this and other service, beyond the ability of the Government to supply them. Gen. Fremont had been appointed to this Department but had not arrived, and Gen. Pope, who was next in command, was in Illinois, discharging duties devolving on him there. In this state of things Col. Harding found himself embarrassed for want of troops, and, expecting General Fremont, he did not desire to dispose of the small force at his command, without advising with him or Gen. Pope. He therefore authorized the President to telegraph Gen. Pope, in his name, the condition of things on the North Missouri road, and the want of troops to occupy it.

On the receipt of this dispatch General Pope at once repaired to the State, and the whole road was occupied by troops—not, however, until many other bridges and culverts had been destroyed.

The forces raised by Harris, Green and others, for the Confederate service, kept this portion of the State in constant uneasiness and distress. Bands of the Confederates, or troops of the United States, have been alternately occupying it, and no person can realize how much this people have suffered from allowing their peace to be disturbed by reckless men among them. Malignants who brought, or who aided in bringing on, these misfortunes, have a fearful responsibility resting upon them. The unmarked burial places of those who have fallen in this unholy struggle; the anguish of the widows and orphans left without protection, perhaps without means of subsistence; the charred and ruined remains of once happy homes, and the blighted prospects of hundreds of families, arouse the most painful contemplations, and lead us to reflect with horror on the acts of persons who were foremost in attempting to overthrow and set at defiance the authority of a wise and beneficent Government.

In a short time after the occupation of the line of the road by the forces under Gen. Pope, comparative quite was restored. Gen. Pope's forces were withdrawn for duty elsewhere, and the vigilance of the Government was not deemed necessary by its officers, or the protection, we presume, would have been continued.

Justice requires us to state that the Hon. O. Guitar and the Hon. James S. Rollins of Boone County, Colonel Krekel of St. Charles, and the President of this company, made every effort to induce the Government to continue its protection to the road by building block houses at the principal bridges and having them occupied by troops, and by having a body of some two thousand cavalry to patrol the country south of the Hannibal and St. Joseph road and between the Missouri and Mississippi rivers. Those having authority to grant what was asked were so occupied with other duties, and there being such apparent quiet on the road, they could not be impressed with the importance of continuing the protection; and the

result was the plot of the 20th of December, 1861, by which the destruction of the road was accomplished, and which proved how much the generous confidence of the Government had been misplaced.

Accompanying this report is a statement showing the loss sustained in June, July and December, of 1861, amounting to $86,310. This large sum of money should not be lost to the company, and it will be a matter to be determined by our successors whether they will resort to the tardy process of civil suits to recover the amount, or whether they will ask its assessment on the counties that furnished the men for the destruction of our property, or what course should be adopted to obtain proper redress in the premises. If an assessment be made, it should embrace counties off of the road, as, in some instances, they furnished the larger part of the men for the work.

The state of warfare existing along the line of the road during the past year has reduced, to a great extent, the receipts from passengers, and also from freights. It may be well, however, to state in this connection, that in no instance has a civilian been molested on any of our passenger trains, or injured in any way, during all these troubles; nor has injury occurred to any passenger in the eight years that passenger trains have been running on the road.

It is to be hoped and is believed that there will be no further interruption. Whilst, however, the troubles of the country last, it will be essential to keep a military force on the road for its protection, as a few bad men, without anything at stake in the community, having evil inclinations, may, if not watched, bring again suffering and trouble on the people among whom they live, and to whom they are both a curse and a scourge.

The blockade of the Mississippi river, the southern outlet for the products of this section of the State, and the consumption by the troops occupying it, of much that it produced, deprived the company of a large amount of regular business. St. Louis remained no longer a market, nor were the usual amount of supplies purchased by the people of Northern Missouri, although the crops of the year past were better than for many years before. The company has thus, during the past year, lost a great deal of business that it would have received, both from freight and passengers, if there had been a market and quiet country.

Notwithstanding the civil disorders that have existed along the line of the road, affecting seriously its business; the financial troubles experienced by the company for some time after the present Board entered upon their duties, and the loss by the destruction of property, we have managed to sustain the road through all, and are able to present a very favorable exhibit compared with other years:

The receipts of the road for the year ending 1st April, 1860, were	$322,918 00
Expenditures for same period	275,336 90
Net receipts for the year	$57,581 19
The receipts of the road for the year ending 1st April, 1861, were	$341,260 92
Expenditures for same period	252,861 44
Net receipts for the year	$88,299 48
The receipts of the road for the year ending 1st April, 1862, were	$253,577 33
Expenditures for the same period	175,357 51
Net earnings for the fiscal year ending 1st April, 1862	$78,219 82

Whilst this shows a loss of $87,683 59, in the gross earnings of the road on its regular business for the year ending 1st April, 1862, compared with the previous year, the profits for the same period on nearly a hundred thousand dollars less of business are within $10,079 66 of the preceding year, and the company has repaired the destroyed road and made many valuable improvements, some of which will hereafter be referred to, and all of which are included in the expenditures for the year of $175,857 51.

The expenditure during the past year, $77,608 98 less than the year before, was occasioned to some extent by the purchase of rolling stock, and the making of improvements essential to the operation of the road by our predecessors.

As before remarked in this report, the road was not completed to Macon City, which is the point of its junction with the Hannibal and St. Joseph road, when it ceased to receive State aid, and then it was greatly deficient in rolling stock, station houses, and many other requisites for its successful operation, all of which the company have not, up to this time, been able to provide for out of its surplus earnings. As fast as its means justified us, these wants have been supplied.

We have shown our net earnings on our regular business for the fiscal year ending 1st April, 1862, were	$78,219 82
Add to the net receipts on our regular business the amount earned during the year from the government for the transportation of troops, (the exact sum not now known) not less than	110,000 00
And we have for the net earnings of the year to April 1, 1862	$188,219 82

This sum, as far as collected, has been applied to paying off the floating debt existing at the time the present Directory took charge of the road; to paying for the re-construction of the road after its destruction; to extending it so as to connect with the St. Louis and Iron Mountain road; to fitting up and making comfortable the depot at Macon City, and a covered passage walk from the Hannibal and St. Joseph road to our depot at the junction; to the building of large and commodious wood sheds; and to other valuable improvements which the interests of the company required.

Just prior to the destruction of the road in December, it was the hope of the Directory that they would be able to save from the net earnings of the company an amount sufficient to iron the road some ten or fifteen miles above its junction with the Hannibal and St. Joseph road, the grading being already done. This would have enabled the company to obtain a large amount of business without being brought into competition with the Hannibal and St. Joseph road for it. All efforts thus far to extend the benefits of a railroad to the people above the junction of the roads have been defeated. We trust, however, that few years will elapse before this desirable object to them, to the State, to St. Louis, and to the company may be accomplished. Not less important to all the interests we have named is the building of the Missouri Valley road, from our road in Randolph county, to St. Joseph. The construction of both these extensions of the North Missouri Railroad we still regard as feasible.

If the next Legislature will grant to this company authority to issue first mortgage bonds for three millions of dollars; one million of it would enable this company to complete its road to Iowa, above its junction with the Hannibal and St. Joseph Railroad, and to make improvements for crossing the freight cars at St. Charles without unloading them, and the other two millions would secure the completion of the Missouri Valley road.

The extension of the road above the Hannibal and St. Joseph road to the Iowa State line would be a distance of about seventy miles. The extension of the road by what is called the Missouri Valley road to St. Joseph would be a distance of about one hundred and sixty miles. The length of the road now completed is one hundred and seventy miles. With the two extensions completed we should have four hundred miles of road in operation to secure a loan of three millions of dollars. With these extensions completed it is not, we think, unreasonable to assume that this road would not only be able to earn the interest on the three millions of first mortgage bonds, but, in all probability, on the amount of State credit which has been granted to it. If permission is given to any road to issue first mortgage bonds or to use its surplus means in its completion, it should be granted to this. The reasons and principles which will apply in giving legislative aid to any other road, will apply with equal force to this, and the people of this portion of the State will expect as much liberality shown to them as to the people of any other part of the State.

It will be a question for the next Legislature to determine whether it is best to sell out and sacrifice the roads of the State, or to adopt measures like these suggested, or some others, to preserve the railroads to the people of the State, whose money and credit have constructed them as far as they are completed.

First mortgage bonds, with such basis as could be offered by this road, ought and would command par, it is thought. It would be only about $7,000 of a loan on each completed mile of railroad, and we think, well informed capitalists would consider it a safe investment on such a road to lend ten thousand dollars to the mile.

With the Missouri Valley road completed, the North Missouri road would no longer be a dependency on another road to get its business to St. Joseph, but would be able successfully to compete for all business going to or coming from the far West, and bring it to the great commercial metropolis of Missouri, St. Louis.

During the past year every effort has been made by this Company to bring about the most friendly personal and business relations with the Managers of the Hannibal and St. Joseph Railroad, and it is gratifying to be able to report that a far far better state of feeling seems to have grown up between the two Companies, which, we believe, will be strengthened, and prove mutually advantageous.

At the beginning of the administration of the present Directory a contract was made with the Hannibal and St. Joseph Railroad Company, under which, during the summer, the passenger rate from St. Louis to St. Joseph was fixed at $10 50 for the through trip.

The Hannibal and St. Joseph road gets of this sum $7 for each passenger, whilst the North Missouri road gets only $3 50. In other words, the Hannibal and St. Joseph road gets for carrying a passenger 136 miles, being the distance from its junction with the North Missouri road to St. Joseph, $7; whilst the North Missouri road gets only $3 50 for carrying the same passenger 170 miles, that being the distance from St. Louis by the North Missouri Railroad to its junction with the Hannibal and St. Joseph road.

To do a through business with the Hannibal and St. Joseph road on amicable terms these conditions had to be acceded to. We have reason to believe that when the present contract expires in May, the Hannibal and St. Joseph road will give to this Company more favorable terms.

The Hannibal and St. Joseph Railroad managers can but desire that their business should be so conducted as to give satisfaction to and accommodate the public, and, we doubt they will not consent to make some pecuniary sacrifice to accomplish this object. In an informal conversation with the Superintendent by our President, it was understood that some further concessions would be made which, we hope, will be such as to give entire satisfaction to this Company.

The shortest, quickest, most desirable, and natural route of travel from St. Louis to St. Joseph, and from St. Joseph to St. Louis, is by the North Missouri Railroad. The cost to the passenger is never greater by this route than by others, and it is not believed that the influence of the Hannibal and St. Joseph road will be exerted to divert travel from its natural channel, when it results in injury to the State whose means has built both roads, unless its pecuniary interests would greatly suffer thereby. We think it must be desirable on the part of the managers of both roads that they should be conducted without opposition to each other, so as best to accommodate and give satisfaction to the public, on whose favor after all, (unless roads have a monopoly,) success in business must depend.

By the contract to which we have referred with

the Hannibal and St. Joseph Railroad, this Company, during the three winter months, whilst navigation was closed, received one-half of the rates of fare between St. Louis and St. Joseph.

In addition to the improvements alluded to as being made the past year, the Company arranged so as to have a telegraph line erected on its whole route it has erected a number of new wood sheds, and has fitted up a splendid passenger depot at the corner of Carr street and the Levee, which is more convenient to the public. It is expected that our successors will at one take the necessary steps to have the freight as well as the passenger business done at this point.

The Company, and the people of this city and State, and the public at large, are indebted to the wisdom of Major General John C. Fremont for the connection of this road with the St. Louis and Iron Mountain and Pacific Railroads, by which the Government was greatly benefitted, and the public interest subserved. This Company, regarding its connection with the St. Louis and Iron Mountain Railroad as a matter of importance, agreed to pay towards the construction of the connection the cost of iron and ties, whilst the Government was to pay the cost of right of way and all the other expenses necessary to make permanent this connection; and the road connection was to remain the property of the Company, subject to use by the Government, with all the motive power of the three roads whenever military necessity required it, in transporting its troops, munitions of war, and supplies.

From the statement submitted by the Treasurer of the North Missouri Railroad Company, which is presented with this report, it will be seen that when the United States Government has paid its indebtedness we shall have on hand a surplus of means amounting to about $51,700 with which to add to our rolling stock, and make some important repairs and improvements on the road. There are a great many ties that need renewing. A track should be laid at Macon City, and a freight depot erected there to enable this Company and the Hannibal and St. Joseph Company to transact their business with greater facility and satisfaction; also, a considerable expenditure will be required in putting in track-switches, and erecting freight buildings and suitable freight platforms at the Carr street depot. An enlarged depot building will have to be erected at Allen. A new depot building will have to be erected at Wellsville, in place of the one burnt 20th December last. Our facilities for obtaining water in the winter for the engines, increase of machine shop room, sheds for cars, and many other improvements, should be made as far as the means of the Company will justify.

The most important movement required on the road, and which should be made at the earliest practicable day, is the crossing of the Missouri river at St. Charles without unloading the freight cars. This should be kept constantly in view as a work to be done whenever the means of the Company will permit; and that it may be kept prominently before those who will have charge of the management of the road, it is again alluded to in this report.

It is well, perhaps, to call attention in this report to the facts that the North Missouri Railroad has received much less aid from the State per mile, and has cost much less per mile in the aggregate, than the other trunk roads of the State; that it passes through a very fine agricultural country, rapidly filling up with an industrious and thrifty population; that it is without any rival to compete for business, and has the Hannibal and St. Joseph road as a partial feeder; it has far less to earn than any other trunk railroad to enable it to pay the interest due on the State debt, and we feel confident that if it was extended to Iowa, and the Missouri Valley road built to St. Joseph, its net earnings would pay the interest on the first mortgage bonds required for these extensions.

But for the wanton depredations perpetrated upon the property of the Company, we might this day have been enabled to iron and equip the twelve miles of road now graded above the junction with the Hannibal and St. Joseph road, and the people of that section of the State may attribute to Secession the postponement to complete so valuable an improvement to them.

The foregoing report is respectfully submitted to the stockholders by the Directory.

ISAAC H. STURGEON, President.

The National Finances.

THE WEALTH OF THE UNITED STATES, AND THE LAW UPON WHICH IT IS BASED.

We have taken frequent occasion to refer to the political unity of the country, as based upon the conviction of the material advantage resulting therefrom, and a sense of mutual dependence. It has, in its support, the double tie of sentiment and reason. In the North the union is perfect. It would be everywhere, but for one refractory element. This is remarkable, considering the different nationalities of which our population is composed; and is an emphatic testimony in favor of our institutions and of our government. Within ten years, more than 3,000,000 immigrants have landed upon our shores, and been received into citizenship. The armies now in the field are recruited as largely from foreign, as native born. All are actuated by a common sentiment, and all are contributing equally toward a common object. With us, each man counts to the full measure of his means and faculties. Hence the military strength which our government can put forth is vastly greater than that of any other nation.

A similar law holds good in reference to the financial strength of the country, and accounts for the ease with which we are sustaining the enormous burdens which the war imposes. It has been a favorite policy with the English government and people, for a long time past, to encourage the emigration of their poor to this country. They feel themselves incapable of giving adequate employment to thisclass. It is a common phrase with the journalists of that country, that its own trade is increased just to the degree of such emigration. An Irishman at home is clothed in rags, and subsists upon potatoes and salt, not because he is not willing to work, but because he can get nothing to do. He cannot purchase land, the culture and improvement of which, tend more than anything else to develop habits of industry and economy, and to raise man in the scale, by increasing a feeling of independence, and by necessary consequence, his self-respect. At home, he is surrounded on all sides by limitations to effort and enterprise, which have kept him, for generations, stationary, not only in material, but in his intellectual and moral condition. But when landed upon our shores, the whole world is before him. He can at once utilize to its full degree, whatever faculty he possesses. Land in every part of the country, is no more sacred than gold. The title of one is transferred with almost equal facility as that of the other. With the new motives and opportunities supplied, the immigrant becomes industrious, saving and thrifty, and acquires property, on the average, faster than native born citizens in similar positions. In this country, he soon becomes a consumer of the fabrics of the Old, to the amount of dollars where, before his emigration, he consumed them to the amount of pennies. Manchester, Sheffield and Birmingham derive no small portion of their wealth and importance from the trade which the Irish in the United States, either directly or indirectly, have been instrumental in supplying.

Now the financial strength and general comfort which prevails in this country is greater than that of any other, just in the degree that the labor is more valuable and self-sustaining. Judged by this test, the difference is almost infinite. In the United States we carry no dead weight. Almost every person in them is a producer under the most favorable condition. We consequently have nothing to fear so long as we can prevent a forcible interference, or disturbance with our domestic industries. So long as that upon which all others are based, agriculture, is prosperous, all others must be so to the extent that sustains in comfort the persons employed in them. So long as there is an abundance of food produced, there must be a corresponding demand for the fabrics that ordinarily enter into domestic economy. Hence the complete independence of our government in deciding upon any line of action that may seem expedient to adopt. In our present civil war we hear of no distress in New England, the great seat of manufacturing industry in the United States. If the people there are not so fully employed as they usually are, they find no difficulty in restricting their expenditures to the scale of their earnings, without a sensible diminution from their comforts. Should their industries, in their present avocations, be permanently curtailed, they will find no difficulty, without any aid from government, in embarking in new enterprises without disturbance to the public welfare, or permanent inconvenience to themselves.

As our strength results from our political and social systems, the latter must be thoroughly understood as a means of correctly estimating the former. Hence their discussion is as appropriate to a commercial circular as the quotations at the Stock Exchange, or a statement of the movement and prices of merchandise; more so, as the latter are sequences or results of the former. It is an easy task, simply to chronicle events. We have, in doing this, especially where they transcend ordinary experience, endeavored to state the law upon which they depend. By this means, if our conclusions are correct, we are enabled to render a double service.

We stated in a previous CIRCULAR, that food and clothing are the great ends of all governments. Their abundance under it, other things being equal, measures the excellence of any particular form. We have this test most emphatically in our favor. Our government in defending its rights and dignity, is under no necessity of considering how its action will effect the condition of a large portion of its people—whether it will put bread in their mouths, or reduce them to starvation, for the reason that it closes no avenues to honorable exertion, but leaves to labor its full reward. No one interest, consequently, has grown so out of proportion to all others as to be an incubus, and perhaps a dead weight upon them, in case of a disturbance in the domestic affairs of a distant country. No nation is strong that must act under the pressure of such a necessity. We are fortunately relieved from it, thanks to our free institutions, which despite of foreign advice, we are still determined, from the inestimable boon they have secured to us, to resolutely maintain.—*Hallett's Financial Circular.*

Railroad Earnings--Monthly.

The earnings of the Erie Railway for the month of April, 1862, were..... $605,755 48
Do., 1861 ..... 547,174 03

Increase..... $58,581 45

The earnings of the Norwich and Worcester Railroad for April were as follows:

1862..... $26,748 09
1861..... 24,488 50

Increase $2,259 59
